

### Comment from Cerissa Haley

Cbd is amazing and should be allowed as a supplement! If manufactured correctly this helps so many with no harsh side affects! It is a natural herb that our bodies happen to need so why make it a phamasutical and jack up the cost! No thank you God had it growing naturally since the beginning of time and our bodies tell that story !! Endocannabinoid system (ECS) which means we as people should be able to eat or drink or take this herb in any form to get its cannaboniods into our ECS ! Its wonderful and harmless and natures gift! Please allow us the easy access of having this as a supplement!! Keep it natural and over the counter Please please please!!!
