Docket Number NHTSA-2019-0036

Please don't change the regulatory barriers to allow driverless vehicles. There is no way the automated logic could account for spur of the moment changes and will put more people at risk. Not to mention removing jobs from families. Safety should come first and these vehicles are not safe. Can these vehicles see black ice? Can these vehicles see flooding? Can these vehicles see someone walking, running or on a bike? How about making turns, can they amply judge the space needed when other vehicles are present? I have seen drivers struggling to make some turns because of the way the intersection is built how could automated logic see this? There is so much that is unknown about this, there hasn't been enough testing. Please dont do this. Only a human can make split decision if necessary. Safety first!!!!
