FMCSA-2018-0037 Autonomous trucks and automobiles are going to deprive younger people of all the joys of our youth. But, the real world problem is the severe number of fatalities that will happen during the learning curve of these vehicles. Our Government has become lazy in the real-world implications of this and the lack of common-sense to making decisions. Want safety, I will tell you how to achieve it. Remove Swift Transportation and Werner Enterprises from being a Motor Carrier as their crash rate have risen to a point where they are not able to recover from this safely. Adding more under-trained people whom are not just a risk to themselves but the general motoring public as well. Autonomous vehicles to date have stopped in the middle of Interstates and even run over and KILLED a person with a bicycle. Have heard problems in cities with them running over pedestrians as well. These computers cannot calculate the unthinkable, they only know numbers. If you value your families you would feel as millions of others do and cannot accept the results or fatalities that will be associated with these unmanned vehicles.
