Vincent Jarvey - Comments

I would like to give my thoughts on why I do not like fully autonomous trucks on public roads.

If unmanned how will the truck know when to stop if a any one part of many goes bad?

The bad accidents that Uber, and Tesla had killing people are just a taste of what a 80,000 pound big rig could do if major saftey systems go berserk. Also I believe you cannot program a machine to drive in bad, weather like heavy rain, and or snow storms, and or ice out west, when chains are required.

I just believe that autonomous vehicles of any kind do not belong on public roadways with passenger vehicles, and pedestrians.

I leave with a link of some cases of autonomous car accidents.
