

## Comment from Peter Van Keuren

I'm 76 years old and have been an automotive mechanic for 45 years. I am SO used to checking my outside mirrors that it's hard for me to imagine looking elsewhere to see what is beside my vehicle. Looking at a center display for backing up or to see what vehicles are behind me is one thing, but to adapt myself to looking somewhere on my vehicle's dashboard or console to see what is in my blind spot on either side of me, will definitely take some "getting used to". If this is in the interest of increasing fuel mileage, the fuel savings will be minimal at best.
