

Comment from Daniel Teoh

Moving towards digital systems to support better comprehension of the traffic behind you will lead to more innovation in the space. The eye -> mirror construct has limited vehicle design for decades and we now have the technology to challenge that interaction.

For example, your eyes can only look at one spot, the mirror, to see if there's a car to your left. Cameras and screens are approaching a price point where you can have 100% confidence that there is a vehicle in your proximity without taking your eyes off of the road.
