Full Global Carbon Budget

The Global Carbon Budget is a collaborative effort of the global carbon cycle science community coordinated by the [Global Carbon Project](#). The latest available data are [doi: 10.3334/CDIAC/GCP_2016](#), which were released November 13, 2016. The most recent published paper is "[Global Carbon Budget 2016](#)" (doi:10.5194/essd-8-605-2016, November 2016).

The global carbon budget refers to the mean, variations, and trends in the anthropogenic perturbation of CO₂ in the atmosphere, referenced to the beginning of the industrial era. It quantifies the input of CO₂ to the atmosphere by emissions from human activities, the growth of CO₂ in the atmosphere, and the resulting changes in land and ocean carbon fluxes in response to increasing atmospheric CO₂ levels, climate change and climate variability, and other anthropogenic and natural changes. An understanding of this perturbation budget over time and the underlying variability and trends of the natural carbon cycle are necessary to understand and quantify climate-carbon feedbacks.
