RE: Docket No: NHTSA-2020-0075-Receipt of Petition for Temporary Exemption From Shoulder Belt Requirement for Side-Facing Seats on Motorcoaches

Dear Acting Administrator Owens:

Diamond Coach Interiors, LLC submits the following comments to the National Highway Traffic Safety Administration's Notice of receipt of a petition for a temporary exemption; request for comment, Docket No. NHTSA-2020-0075, published at 85 Fed. Reg. 51550 (August 20, 2020). We strongly support granting the exemption from the shoulder belt requirement for side-facing seats on motorcoaches to the final-stage manufacturers identified in the petition.

Our company is a final-stage manufacturer in the entertainer motorcoach market. Diamond Coach Interiors, LLC has 10 technicians that have been designing and building entertainer motorcoaches since 2001.

Entertainer motorcoaches are a unique form of transportation specifically designed and manufactured for small groups such as music bands or political candidates. Although constructed on the same bus chassis or platform as a 55-passenger motorcoach, entertainer coaches generally are customized in two or more stages from an "incomplete vehicle" and finished to seat fewer than 16 persons, while providing the amenities more closely associated with a "motor home." Amenities in entertainer motorcoaches typically include couch seating, galleys, tables, showers, bunk beds, satellite television, a cooking area with counter tops, and refrigeration units.

"may cause serious neck injuries when applied to side-facing passenger seating positioning." 78 Fed. Reg. 70474, 70447 (November 25, 2013).

We understand that NHTSA also has some concern that shoulder belts may cause serious neck injuries when applied to side-facing seats. The 2013 final rule states the agency is "aware of simulation data that are indicative of potential carotid artery injury when the neck is loaded by the shoulder belt." 78 Fed. Reg. at 70448, and n.108, citing Fildes, B., Diggs, K., "Occupant Protection in Far Side Crashes," Monash University Accident Research Center, Report No. 294, April 2010, pg. 57. NHTSA conducted no testing on the impact or injuries to passengers in side-facing seats in motorcoaches before imposing the requirement in the 2013 final rule. Nor has the agency conducted any such testing since the rule was published. Thus, there is no available credible data that supports requiring a Type 2 belt at the side-facing seating positions. As a result, we are concerned that serious injury to passengers could result from the good faith efforts made by operators and manufacturers to comply with this rule.

We hope that this petition would be approved and granted, as the petition published under NHTSA-2019-0019 for the Hemphill Brothers Leasing Co. was similarly granted. If it is not granted, an imbalance will be created within our marketplace, where only one final-stage manufacturer will be able to complete vehicles for the entertainer motorcoach market.

We look forward to continuing our strong partnership with NHTSA to ensure the safety of the traveling public.

Sincerely,

Kylee Ervin President
