

## Comment from Jimmy Boyd

Read in my local newspaper on October 5, 2020 that another person has been killed by an exploding Takata air bag inflator, bringing the worldwide death toll to at least 26. The latest death occurred August 20 in Mesa, AZ, in the crash of a 2002 Honda. It was the 17th death reported in the United States. Others have been reported in Malaysia and Australia. Takata used volatile ammonium nitrate to create a small explosion to inflate air bags in a crash. But the chemical can deteriorate over time when exposed to moisture in the air. The explosion can blow apart a metal canister and hurl shrapnel into the passenger compartment. "Com'on man, here's the deal" - Our government and big business, like General Motors Corporation, does not give a damn about doing what is right...My advice is to get the best lawyer you can if something happens to a loved one or to you and sue the s\*it out of GMC, or whatever manufacturer built and sold you your automobile.....!!!
