Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Julia VandeGrift

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kate Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Barbara Lenarcic

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ellen Asher

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tracey Bonner

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brenda Walstrom

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Chey Richmond

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lisa Goldman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Grace Hawk

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Don Quest

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gale Espinosa

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Amy Weappa

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Frances

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Wilson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gloria Morrison

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Estevan Trujillo

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Karen Schambach

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Karin Dworkin

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Zahakos

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Martin Carroll

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joyce Erickson

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tom Lindsey

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William Beckett

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Margaret Sawyer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Robbins

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pat Marino

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

P. McIntyre

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Henry Ickes

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elliot Chase

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Raymond Marshall

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Harriet Levine

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tracey Rosenlund

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

katie austin

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Arnold

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Todd Southworth

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dona Solmon

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Maguire

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Wayne Andrews

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Edward Hejtmanek

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jason Green

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Schoenberger

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jeanne Heitman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ernest Boyd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

gary cohen

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tina Ann

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tina Brenza

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

P F

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

andrea Feig

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sarah Feola

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Cary Stitt

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Johnson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Cheri Laos

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Roberta Doheny

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kelly Wieber

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Judy Scriptunas

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rod Garner

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Thomas Dawley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Murphy

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Barbara Toshalis

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Amanda Pinson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lindsey Skibell

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Conrad Willeman

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Senger

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peter Rannells

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Carole Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Carol Bruml

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kathleen McQuade

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Janet H.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lilly Knuth

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christina Coleman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Yaamini Venkataraman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William Dane

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Roxann Carmean Floyd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joan Johnson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

L. Harris

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Terri Carlson

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jayne Holtman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peter Hancock

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gerry Roy

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jacquelyn Roberts

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Homer Reese

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Gomolka

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

mia heavyrunner

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

George Grace

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ivy Buchanan

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Shelly Young

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ross Woodbury

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sarah Brownrigg

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Richardson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joseph Landolph

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gladys Simerl

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

thomas ricobene

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brian Waak

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gregory Puppione

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jason Nardell

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jane Dineen

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Curtis Moore

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Donna Smith

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lorrie F Odom

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sam Orlich

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

christine etapa

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

ingeborg glier

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Albert Gauna

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gen Guracar

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peggy Garber

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Antonio Lucero

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brian Boortz

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Peugh

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Allen Nelson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William Ridgeway

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joe Ross

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Katharine Molnar
