Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Thomasin Kellermann

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

MARY BRADEN

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robert Longnecker

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sean Hagstrom

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Paul Edelman

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Hochstetler

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joanne Groshardt

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peter Schmale

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

T. M. Kraemer

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pam Elders

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Amy Phelps

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Wendy Hawkins

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tony Wise

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

DEBORAH SMITH

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robert Olson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brenda Mills

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

LISA PATTON  
1881 Sutter St  
San Francisco, CA 94115-3234

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Clyde Burton

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gary Hamel

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Charles Keeling

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pete Munoz-Cowan  
1947 Santa Ana Rd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Anzalone

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Candee Henderson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lorraine Hartmann

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Charry Stover

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gary Reitze

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Colleen Carter

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Barbara Drosman

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elizabeth Moore

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Julie Roedel  
1041 N Clay Ave

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Atherton

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robert Welker

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Darlene Wolf

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Silvia Hall  
349 NE 31st St

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Hillary Ostrow

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

patoue riboton

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Vicki Gallegos

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kathleen Eaton

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Oliver

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kristin Cooper

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mindy Abraham

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

maja mackenzie

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Katie Morgan

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robert Jacobs

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Frank COX  
1946 Las Gallinas Ave  
San Rafael, CA 94903-1740

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jim Bungarden

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

B. Z.

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Hagen

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Edwyna Spiegel

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bobbie Upson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Glenn Yocum

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nick Byrne

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Burnett

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Tovar

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Fiona Priskich

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kristy Ray

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christopher Fletcher

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Judy Kushner

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William C Briggs  
46 20th Ct

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Esten

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Arlene Baker

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Colleen Lobel

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Julie Squire

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Stefanie Johnson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Scout Perry

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jane Wiley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jessica Ryder

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mary Scott

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brian Cochilla

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Wassim El-Ahdab

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bonnie German

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bob Steininger

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jennifer Messina

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Travis Foster

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bob O'Neil

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Croitiene ganMoryn

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Paul Sullivan Sr.

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Normand Dufresne

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Steven Rosenberg

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peggy Krause

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Diane Krell-Bates

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Gillaspay  
9155 Wigwam Way

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

betty winholtz

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Patricia Finley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Paula Deubel  
2426 Lindell Rd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Taffet

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mel Lopane

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Doris Verkamp

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Georgann Kovacovsky

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michael Minnick

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Roger H. Harrell

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peter Jones

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pamela Beacom

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Andrea Chisari

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Aileen Renner

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nan Watson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Barbara VanNess

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

GREG DEMASI

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michele Barnes

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Becky kurth

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marilee Murray

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sandra Celli

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peggy Moody

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

elsa miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lindsey Slocum

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Arthur Kunhardt

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dave Lutes
