Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Donald Glass

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ronelle Melekai

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lauren Chambers

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Chrisanthos Vlasidis

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Gayle Abbott

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Scott Myers

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Vic Thomas

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Matt Caldie

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Derek Brumley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sandy Rhein

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Julie Levenbach

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Amanda Gilliam

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jennifer Moix

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Daniel Mink

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jack Kutney

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joseph Wenzel

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jacqueline Jeffers

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nicolas Estevez

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Skrzynecki

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Eric Griffith

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elaine Fischer

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Peter Borden

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Donna Newman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Amanda Winnicki

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Leuise Crumble

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marcelle Cole

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

karl meller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michael A. Johnston

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Susan Balaban

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Annalisa Crannell

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Margery Ellison

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

James Kellett

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Chad Johnson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kimberly Feilmeyer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marguerite O'Rourke

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Foster

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Susan Welsford

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kathy Dickerman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joanne Burton

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bill Weinerth

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Charlie Cremer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gabriel Gomes

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Judith Braffman-Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Deborah Fuller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Scarlett Bacon

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Chizu Omori

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Hilary Henshaw

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Bergey

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Cynthia Lutz

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

TROY GLENNON

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Penny Penny Weissman

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lester Belanger

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Martin Mador

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joan Scofield

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kenneth Rhines

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Susan foley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Will Panora

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Keenan Grove

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Georgia Shankel

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Carrie Campbell

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

George Worotikan

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brenda Kroupa

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jessica Lunt

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lauren Wilson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elizabeth Julia Stoumen

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Richard Miller

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Erika Gasper

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

L C

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jon Povill

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rita Fahrner

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Gebauer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Erik Pettersen

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ashley Shadrock

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lorren James

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy L. and Bert A. Anderson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Manal Ramadan

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Abbie Carrasco

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jay Young

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mark Freitag

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lily Hopwood

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gerard Dopp

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Candia Katich

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Janelle Maynard

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mike Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elena Warshauer

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Janell Sorensen

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lisa Lambert

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mariel Jordan

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bret Pence

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jordy Albert

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jeff Kinsey

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pete Cumming

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Stuart Weiss

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Erin Millikin

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

PJ Breslin

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Deborah Anderson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Carolyn Vary

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jessie Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Megan Mcfatter

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bruce Bonifaci

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Victor PAGLIA

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rebecca Deardorff

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dennis Cater

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

MaryLois Hilton

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William and Karla Forsyth

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gilda Nifong

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Albert Alexander

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Wesley Wolf

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Margot Borden

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jennifer Alden
