Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Muriel K Kruppa

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lindsay Moore

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mrs Jody Kreckel

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christine Weathersbee

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jillian Fiedor

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jean Pauley

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Katherine Fryer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gloria Goings

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Geronimo Mato

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michael Barnhorst

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

William McCullough

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Barbara Williamson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rosalie Stefanich

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jennifer Wittlinger  
3353 Willow Brook Ct

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Roz Connor

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Andrea Maxwell

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christopher May

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Virpi Loomis  
19 Upper Clark Ave  
Van Etten, NY 14889-9775

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kenneth Babineau

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Diane Obringer

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Satter

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Roxene Miller

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gary Gover

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Johnson

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Maureen Stubblefield

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bambi Magie

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Heleh Webb

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Grace Betts

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nancy Sadowsky  
4225 SW 84th Ave  
Miami, FL 33155-4238

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marilyn Pitts

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ann T

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Karen Maleski

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michael Hardin

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marilyn Jones

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Alejandra Morales

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Margaret DeMott

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Ken Zontek

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robin Swanson  
748 Isenberg St

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Austin Matlow

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joyce Veishlow

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

brook bannister

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mary Zack

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Marilyn Carlisle

Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Vicki Smith

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lisa Neste

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Diane Matza

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gail Richardson

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Karen Rogers

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Michele Morris

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

ANNIE DAVIDSON

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christine Gadbois  
75 Fountain Ave

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Matthew Russo

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Hygie Starr

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Randy Marchand

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Walter Alton

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Elaine Tirrell

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rainbow Di Benedetto

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Diane L Wahl

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jessica Kiamco

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jerry Sawyer

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Kathleen Doy

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Leah Clayton

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Eric Benson

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jennifer Parisi

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mary Ann Vascotto

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nick Morrison

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Derenda Beck

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brian Pulling

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jeffrey T Moran

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Kessler

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sharon McChancy  
93 Mchenry Hill Rd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jamie Shields

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Pat OShea

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Robbi Chisholm

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lupe Uribe

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lacey Hicks

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mary O'Neill

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Paul Barringer

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Lisa Todd

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Paul Zloto

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Rob Seltzer

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Darilyn Schlie  
6937 Bentley Ave

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Gwendolyn Brown

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Jacqueline Jenkins  
3789 5th Ave N

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Mj Najimi

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Heidi Miller

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Bob Betz

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Nadine Stoner

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Linda Goya  
17027 Illinois Ct

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Tia Pearson

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

David Boechler

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Brian Selden

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

JoAnn McIntosh

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Joyce Coogan  
8780 W Fairview Ave

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Christine Malaroche

However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Sara Gemind

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

John Fritz

Subject: Comment Regarding Docket ID No. EPA-HQ-OAR-2021-0208

Dear Administrator Regan,

I am glad to see that you have chosen to undo the Trump administration's rollback of the clean car standards for vehicles made from 2021-2026. However, given the scale of the climate crisis, the new standards should be much stronger—they should be at least as strong as the standards that were finalized under President Obama. Unfortunately, the proposed standards are full of loopholes that will allow automakers to not make the most efficient cars they can and will also slow the transition to electric vehicles. I strongly urge you to adopt the more stringent alternative put forward in the rule and reduce the flexibilities that are given to the automakers, to ensure that they make and market more electric vehicles and gasoline-powered vehicles that are much more efficient.

Sincerely,

Efren Servino  
2373 253rd St
