

## **Comment from Sylvia Ollinger**

Dear Transportation Secretary Buttigieg,

As a person of faith and conscience, I am writing to ask you to enact the boldest and strongest possible clean car standards.

We must reduce pollution as soon as possible! This will reduce health care costs and protect our health, particularly of the most vulnerable in our communities. In the we must develop new clean car technologies and electrification of the transportation sector. The window for meaningful action to address climate change is closing. We ask NHSTA to do its part to address climate pollution starting with the largest sources like transportation.

This is a moral opportunity to follow the science and show the world that the U.S. is serious about enacting climate solutions.

I urge you to finalize Alternative 3, which will push automakers to make the most efficient vehicles possible.

Thank you for this opportunity to comment.
