## D12 - Driver Height - FARS Only

**FORMAT:** 1 set 1 numeric, 1 set 2 numeric

**SAS NAME:** Vehicle.DR\_HGT

**ELEMENT VALUES:**

**FEET**

| Codes | Attributes  |
|-------|-------------|
| 0     | See Inches  |
| 2-8   | Actual Feet |
| 9     | Unknown     |

**INCHES**

| Codes        | Attributes    |
|--------------|---------------|
| 00-11, 24-96 | Actual Inches |
| 98           | Other         |
| 99           | Unknown       |

**Definition:** This element identifies a driver's height.

**Remarks:** Use the driver licensing files to code this element. The medical examiner or coroner's report may be used and may contain more current/accurate information.

Code the driver's height in feet and inches, if available. Inches less than 10 must be right justified with a leading "0" (e.g., 9 inches is coded "09"). If height is only available in total inches, then code INCHES and code FEET as "0."

The tallest height that can be recorded in total INCHES is 96 inches (8 ft.). The tallest height that can be recorded in FEET and INCHES is 8 ft. - 11 inches. If the driver is taller than 96 inches, then you must code height as feet and inches. If the driver is taller than 8 ft. - 11 inches, then you must code the DRIVER HEIGHT as "Other" (use code 0 for FEET, use code 98 for INCHES).

DRIVER HEIGHT less than "3 Feet," greater than "7 Feet - 0 Inches," less than "36 Inches," or greater than "0 Feet - 84 Inches" will raise an error flag.

**Consistency Checks** ([See Section 400](#)):

| Error ID | IF                                       | THEN                                                 |
|----------|------------------------------------------|------------------------------------------------------|
| 1HDF     | DRIVER PRESENCE equals 0, 9,             | DRIVER HEIGHT (feet and inches) must equal blank.    |
| 4H1P     | DRIVER HEIGHT/INCHES is less than 12,    | DRIVER HEIGHT/FEET must not be blank nor equal to 0. |
| 4H2P     | DRIVER HEIGHT/INCHES is greater than 11, | DRIVER HEIGHT/FEET must equal 0.                     |

| <b>Error ID</b> | <b>IF</b>                                                                                  | <b>THEN</b>                                      |
|-----------------|--------------------------------------------------------------------------------------------|--------------------------------------------------|
| 4H3P            | DRIVER HEIGHT/FEET is 2-8,                                                                 | DRIVER HEIGHT/ INCHES must equal 00-11.          |
| 4H4P            | DRIVER HEIGHT/FEET equals 9,                                                               | DRIVER HEIGHT/INCHES must equal 99.              |
| 4H5P            | DRIVER HEIGHT/INCHES equals 99,                                                            | DRIVER HEIGHT/FEET must equal 9.                 |
| 4H6P            | DRIVER HEIGHT/INCHES equals 98,                                                            | DRIVER HEIGHT/FEET must equal 0.                 |
| 4H7P            | DRIVER HEIGHT/FEET is 0,                                                                   | DRIVER HEIGHT/INCHES must equal 24-96, 98.       |
| D600            | DRIVER HEIGHT/INCHES is greater than 11,                                                   | DRIVER HEIGHT/INCHES should not be less than 48. |
| D610            | DRIVER HEIGHT/FEET is not blank and not equal to 0,                                        | DRIVER HEIGHT/FEET should not be less than 3.    |
| U260            | UNLIKELY: DRIVER HEIGHT (in feet) is less than 3 feet or greater than 7 feet; verify data. | --                                               |
| U280            | UNLIKELY: DRIVER HEIGHT is less than 36 inches or greater than 84 inches, verify data.     | --                                               |

### D13 - Driver Weight - FARS Only

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.DR\_WGT

#### ELEMENT VALUES:

| Codes   | Attributes              |
|---------|-------------------------|
| 040-700 | Actual weight in pounds |
| 998     | Other                   |
| 999     | Unknown                 |

**Definition:** This element identifies a driver's weight.

**Remarks:** Use the driver licensing files to code this element. The medical examiner or coroner's report may be used and may contain more current/accurate information.

Code the driver's weight in pounds, if available.

Weight should be right justified.

Weights less than 100 lbs must be coded with a leading "0" in the left-most position (e.g., 98 lbs is coded "098").

DRIVER WEIGHT less than 50 lbs or greater than 399 lbs will raise an error flag.

#### Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                  | THEN                            |
|----------|-------------------------------------------------------------------------------------|---------------------------------|
| 1HEF     | DRIVER PRESENCE equals 0, 9,                                                        | DRIVER WEIGHT must equal blank. |
| U290     | UNLIKELY; DRIVER WEIGHT is less than 50 lbs. or greater than 399 lbs., verify data. | --                              |

## D14, D15, D16, D17, D18 - Driver Level Counters - FARS Only

### [D14 - Previous Recorded Crashes\\*](#)

### [D15 - Previous Recorded Suspensions, Revocations, and Withdrawals\\*](#)

### [D16 - Previous DWI Convictions\\*](#)

### [D17 - Previous Speeding Convictions\\*](#)

### [D18 - Previous Other Moving Violation Convictions\\*](#)

**FORMAT:** 2 numeric for each element

**SAS NAME:** Vehicle.PREV\_ACC, Vehicle.PREV\_SUS1, Vehicle.PREV\_SUS2, Vehicle.PREV\_SUS3, Vehicle.PREV\_DWI, Vehicle.PREV\_SPD, Vehicle.PREV\_OTH

#### **ELEMENT VALUES:**

| Codes | Attributes                                                                                                |
|-------|-----------------------------------------------------------------------------------------------------------|
| 00    | <u><a href="#">None</a></u>                                                                               |
| 01-97 | <u><a href="#">Actual Value</a></u>                                                                       |
| 98    | Crashes not reported on Driving Record (valid only for <u><a href="#">Previous Recorded Crashes</a></u> ) |
| 99    | <u><a href="#">Unknown</a></u>                                                                            |

**D14 Definition for Previous Recorded Crashes:** This element records any previous crashes for this driver. Count only events occurring within **5 years of** the crash date.

#### **D15 Definitions for Previous Recorded Suspensions, Revocations, and Withdrawals:**

##### **Subfield 1: Previous Underage Administrative Per Se for BAC:**

This subfield records any underage pre-conviction administrative license suspension, revocation, or withdrawal in the previous 5 years including those for zero-tolerance alcohol violations while driving or refusing to submit to chemical testing. This subfield is only for administrative actions associated with alcohol. These are NOT BAC CONVICTIONS.

##### **Subfield 2: Previous Administrative Per Se for BAC (Not Underage):**

This subfield records the count of previous pre-conviction administratively imposed suspensions, revocations, or withdrawals within the previous 5 years for driving with a BAC above a specified limit or refusing to submit to chemical testing. This subfield is only for administrative actions associated with alcohol. These are NOT BAC CONVICTIONS.

##### **Subfield 3: Previous Recorded Other Suspensions, Revocations, or Withdrawals:**

This subfield records any previous license suspensions, revocations, or withdrawals for this driver other than Administrative action for BAC violations. This subfield would include administrative actions associated with drugged driving. Count only the events occurring within 5 years of the crash date. If it can be identified on the driving record, do not include in this count recorded actions

resulting from non-traffic related issues or offenses (e.g., failure to pay child support, failure to appear in court for a non-driving offense, a suspension imposed for a drug-related offense not involving the operation of a motor vehicle). Also note that “cancellation” of a CDL license is not counted here. If a driver has been DISQUALIFIED for a CDL, record this here.

**D16 Definition for Previous DWI Convictions:** This element records any previous DWI convictions for this driver. Count only the events occurring within **5 years of** the crash date.

**D17 Definition for Previous Speeding Convictions:** This element records any previous Speeding convictions for this driver. Count only the events occurring within **5 years of** the crash date.

**D18 Definition for Previous Other Moving Violation Convictions:** This element records any other previous moving violation convictions for this driver. Count only the events occurring within **5 years of** the crash date.

This count excludes non-moving violations noted in the driver history. **Exclusion** examples include registration or title violations, operating a motor vehicle without insurance, failure to pay required toll, improper/illegal parking, leaving child unattended in vehicle, driving on a suspended/revoked license, etc.

**Remarks: DO NOT include the current crash in any of the counters.**

Remember there is a difference between a violation and a conviction. The violation is not counted in [Previous DWI](#), [Previous Speeding](#), and [Previous Other Moving Violation Convictions](#). These elements refer ONLY TO CONVICTIONS. Both convictions and violations appear on driver records in many States. Be careful that you code the conviction dates and NOT the violation dates.

DWI refers to both alcohol and drug convictions.

When you are responding to another State’s request for driver data, do the following.

1. In the counters, record both in-State and out-of-State convictions, crashes, suspensions, and revocations that appear on your State’s record.
2. List out-of-State activity that is included in the counters in the area provided on the Out-of-State Driver Data Response through **RBIS**.

Drivers can have a driving record or driver’s license from more than one State. When you are coding the driver level counter elements ([Crashes](#), [Suspensions](#), [Revocations](#), [DWI](#), [Speeding](#), and [Other Moving Violation Convictions](#)), be sure to combine distinct events from all of the records you have. Be careful not to double-count the same event. Also use RELATED FACTORS - DRIVER LEVEL [089 \(Driver has a Driving Record or Driver’s License from More Than One State\)](#) when this situation occurs.

[PREVIOUS OTHER MOVING VIOLATION CONVICTIONS](#) includes all other motor vehicle convictions. Some examples of convictions include:

- running a red light,
- reckless driving,
- improper lane changing, and
- failure to yield, etc.

**00 (None)** indicates no counts of the indicated type appear on the driving history record. *Also, use this attribute if the driver has not compiled a record of infractions and has never been licensed.*

**01-97 (Actual Value)** Record the actual count of events of the indicated type recorded on the driver history within the previous 5 years.

**99 (Unknown)** indicates the driver appears to be licensed but a driver history cannot be obtained or accessed. If any counter equals 99, all counters must equal 99.

**\* For Element \_\_\_\_\_, Values greater than \_\_\_\_ are unlikely and will raise an error flag:**

| Element                                                       | Value |
|---------------------------------------------------------------|-------|
| PREVIOUS RECORDED CRASHES                                     | 8     |
| Any Subfield of PREVIOUS RECORDED SUSPENSIONS AND REVOCATIONS | 10    |
| PREVIOUS DWI CONVICTIONS                                      | 8     |
| PREVIOUS SPEEDING CONVICTIONS                                 | 8     |
| PREVIOUS OTHER MOVING VIOLATION CONVICTIONS                   | 8     |

Make sure you know what constitutes a MOVING VIOLATION in your State. The DMV should be able to help you determine these.

**Consistency Checks [\(See Section 400\)](#):**

| Error ID | IF                           | THEN                                                                                |

## D19, D20 - Date of Oldest and Most Recent Crash, Suspension, Conviction - FARS Only

**FORMAT:** 1 set 2 numeric, 1 set 4 numeric for each element.

**SAS NAME:** Vehicle.FIRST\_MO, Vehicle.FIRST\_YR / Vehicle.LAST\_MO, Vehicle.LAST\_YR

### ELEMENT VALUES:

#### MONTH

| Codes | Attributes                |
|-------|---------------------------|
| 00    | <a href="#">No Record</a> |
| 01-12 | Actual Month              |
| 99    | Unknown                   |

#### YEAR

| Codes | Attributes                  |
|-------|-----------------------------|
| 0000  | <a href="#">No Record</a>   |
| --    | All 4 Digits of Actual Year |
| 9999  | Unknown                     |

**Definition for Date of *Oldest* Crash, Suspension, Conviction:** This element identifies the date of the *oldest* crash, suspension, or conviction recorded in elements [D14 through D18](#). Count only dates of events occurring within **5 years of** the crash date.

**Definition for Date of *Most Recent* Crash, Suspension, Conviction:** This element identifies the date of the *most recent* crash, suspension, or conviction recorded in elements [D14 through D18](#). Count only dates of events occurring within **5 years of** the crash date.

**Remarks:** If it can be identified on the driving record, do not include recorded suspensions and revocations resulting from non-traffic related issues or offenses (e.g., failure to pay child support, failure to appear in court for a non-driving offense, a suspension imposed for a drug-related offense not involving the operation of a motor vehicle).

Code only dates of events occurring within **5 years of** the crash date. Code the month and year in that order.

This element, although it contains two pieces of information, should be treated as one element. That is, never leave month blank without leaving the year blank, and vice versa.

**00 (No Record) indicates no records of the indicated type appear on the driving history record. Also, use this attribute if the driver has not compiled a record of infractions and has never been licensed.**

Consistency Checks [\(See Section 400\)](#):

## D21 - Violations Charged

**FORMAT:** 2 numeric. Select All That Apply.

**SAS NAME:** *Violatn.VIOLATION*

**ELEMENT VALUES:**

### Reckless/Careless/Hit-and-Run Type Offenses:

| Codes | Attributes                                                               |
|-------|--------------------------------------------------------------------------|
| 00    | <a href="#">None</a>                                                     |
| 01    | Manslaughter or homicide                                                 |
| 02    | Willful reckless driving; driving to endanger; negligent driving         |
| 03    | Unsafe reckless (not willful, wanton reckless) driving                   |
| 04    | Inattentive, careless, improper driving, <i>driving without due care</i> |
| 10    | Use of Telecommunications Device                                         |
| 05    | Fleeing or eluding police                                                |
| 06    | Fail to obey police, fireman, authorized person directing traffic        |
| 07    | Hit-and-run, fail to stop after crash                                    |
| 08    | Fail to give aid, information, wait for police after crash               |
| 09    | Serious violation resulting in death                                     |

### Impairment Offenses:

| Codes | Attributes                                                                                    |
|-------|-----------------------------------------------------------------------------------------------|
| 11    | Driving while intoxicated (alcohol or drugs) or BAC above limit (any detectable BAC for CDLs) |
| 12    | Driving while impaired                                                                        |
| 13    | Driving under influence of substance not intended to intoxicate                               |
| 14    | Drinking while operating                                                                      |
| 15    | Illegal possession of alcohol or drugs                                                        |
| 16    | Driving with detectable alcohol                                                               |
| 18    | Refusal to submit to chemical test                                                            |
| 19    | Alcohol, drug, or impairment violations generally                                             |

**Speed-Related Offenses:**

| <b>Codes</b> | <b>Attributes</b>                                                                             |
|--------------|-----------------------------------------------------------------------------------------------|
| 21           | Racing                                                                                        |
| 22           | Speeding (above the speed limit)                                                              |
| 23           | Speed greater than reasonable and prudent (not necessarily over the limit)                    |
| 24           | Exceeding special limit (e.g., for trucks, buses, cycles, or on bridge, in school zone, etc.) |
| 25           | Energy speed (exceeding 55 mph, non-pointable)                                                |
| 26           | Driving too slowly                                                                            |
| 29           | Speed related violations, generally                                                           |

**Rules of the Road - Traffic Sign and Signals:**

| <b>Codes</b> | <b>Attributes</b>                                                                      |
|--------------|----------------------------------------------------------------------------------------|
| 31           | Fail to stop for red signal                                                            |
| 32           | Fail to stop for flashing red                                                          |
| 33           | Violation of turn on red (fail to stop and yield, yield to pedestrians before turning) |
| 34           | Fail to obey flashing signal (yellow or red)                                           |
| 35           | Fail to obey signal, generally                                                         |
| 36           | Violate RR grade crossing device/regulations                                           |
| 37           | Fail to obey stop sign                                                                 |
| 38           | Fail to obey yield sign                                                                |
| 39           | Fail to obey traffic control device                                                    |

**Rules of the Road - Turning, Yielding, Signaling:**

| <b>Codes</b> | <b>Attributes</b>                                                                                                            |
|--------------|------------------------------------------------------------------------------------------------------------------------------|
| 41           | Turn in violation of traffic control (disobey signs, turn arrow, or pavement markings; this is not a right-on-red violation) |
| 42           | Improper method and position of turn (too wide, wrong lane)                                                                  |
| 43           | Fail to signal for turn or stop                                                                                              |
| 45           | Fail to yield to emergency vehicle                                                                                           |
| 46           | Fail to yield, generally                                                                                                     |
| 48           | Enter intersection when space insufficient                                                                                   |
| 49           | Turn, yield, signaling violations, generally                                                                                 |

**Rules of the Road - Wrong Side, Passing, and Following:**

| <b>Codes</b> | <b>Attributes</b>                                    |
|--------------|------------------------------------------------------|
| 51           | Driving wrong way on one-way road                    |
| 52           | Driving on left, wrong side of road, generally       |
| 53           | Improper, unsafe passing                             |
| 54           | Pass on right (drive off pavement to pass)           |
| 55           | Pass stopped school bus                              |
| 56           | Fail to give way when overtaken                      |
| 58           | Following too closely                                |
| 59           | Wrong side, passing, following violations, generally |

**Rules of the Road - Lane Usage:**

| <b>Codes</b> | <b>Attributes</b>                                                               |
|--------------|---------------------------------------------------------------------------------|
| 61           | Unsafe or prohibited lane change                                                |
| 62           | Improper use of lane (enter of 3-lane road, HOV designated lane)                |
| 63           | Certain traffic to use right lane (trucks, slow-moving, etc.)                   |
| 66           | Motorcycle lane violations (more than two per lane, riding between lanes, etc.) |
| 67           | Motorcyclist attached to another vehicle                                        |
| 69           | Lane violations, generally                                                      |

**Non-Moving - License and Registration Violations:**

| <b>Codes</b> | <b>Attributes</b>                                              |
|--------------|----------------------------------------------------------------|
| 71           | <a href="#">Driving while license withdrawn</a>                |
| 72           | <a href="#">Other driver license violations</a>                |
| 73           | Commercial driver violations (logbook, hours, permits carried) |
| 74           | Vehicle registration violations                                |
| 75           | Fail to carry insurance card                                   |
| 76           | Driving uninsured vehicle                                      |
| 79           | Non-moving violations, generally                               |

**Equipment:**

| Codes | Attributes                                                  |
|-------|-------------------------------------------------------------|
| 81    | Lamp violations                                             |
| 82    | Brake violations                                            |
| 83    | Failure to require restraint use (by self or passengers)    |
| 84    | Motorcycle equipment violations (helmet, special equipment) |
| 85    | Violation of hazardous cargo regulations                    |
| 86    | Size, weight, load violations                               |
| 89    | Equipment violations, generally                             |

**License and Registration Violations:**

| Codes | Attributes                                                           |
|-------|----------------------------------------------------------------------|
| 91    | Parking                                                              |
| 92    | Theft, unauthorized use of motor vehicle                             |
| 93    | Driving where prohibited (sidewalk, limited access, off truck route) |
| 97    | <a href="#">Not Reported</a>                                         |
| 98    | Other moving violation (coasting, backing, opening door)             |
| 99    | <a href="#">Unknown Violation(s)</a>                                 |

**Definition:** This element identifies all violations, citations, and infractions noted as charged to this driver in this crash, regardless of whether the driver survived the crash.

**Remarks:** This refers to those violations to the Vehicle Code charged as noted in the case material associated with this crash. Code all violations listed in the case material for this driver regardless of ownership of the vehicle (“borrowed,” “fleet,” “rental cars,” etc.).

If you are unable to distinguish between the violations within a specific category, use the General Code (i.e., 09, 19, 29, 39, 49, 59, 69, 79, 89) for that category.

**00 (None)** is used when there is indication that no violations were charged to this driver or when no violations are noted in the case material for this driver and that indicates no violations were charged to the driver.

**CRSS SPECIAL INSTRUCTION:**

In cases where the investigating officer has designated “pending” in the case material use **00 (None)**.

**71 (Driving While License Withdrawn)** would include violations for operating a vehicle with a suspended or revoked driver’s license or violating the provisions of a work permit.

**72 (Other Driver License Violations)** is used when the driver is cited for not complying with learner's permit or intermediate driver license restrictions (GDL Restrictions) or if the driver's license has expired. This attribute is also used when the driver has been cited for driving without a license (i.e., never been issued a license). For suspended or revoked, see [71 \(Driving While License Withdrawn\)](#).

**97 (Not Reported)** *Check to see if [00 \(None\)](#) or [99 \(Unknown Violation\(s\)\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **97 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Unknown Violation(s))** is used when it is known that this driver had one or more violations but the specific violation(s) or violation category(ies) cannot be identified.

**Examples:**

- If it is known a driver had two violations but they cannot be identified, code **99 (Unknown Violation(s))** once.
- If the driver has a known specific violation(s) and other unspecified violation(s), code all the specific violation(s) and code **99 (Unknown Violation(s))** once.

**FARS SPECIAL INSTRUCTION:**

In cases where the investigating officer has designated "pending," always follow up whenever possible to confirm a violation was charged before entering [00 \(None\)](#) or **99 (Unknown Violation(s))**.

**Consistency Checks [\(See Section 400\)](#):**

## D22 - Speeding Related

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.SPEEDREL

**ELEMENT VALUES:**

| Codes | Attributes                                   |
|-------|----------------------------------------------|
| 0     | <a href="#">No</a>                           |
| 2     | <a href="#">Yes, Racing</a>                  |
| 3     | <a href="#">Yes, Exceeded Speed Limit</a>    |
| 4     | <a href="#">Yes, Too Fast for Conditions</a> |
| 5     | <a href="#">Yes, Specifics Unknown</a>       |
| 9     | <a href="#">Reported as Unknown</a>          |

**Definition:** This element identifies if the driver **was speeding and it** was related to the crash as identified by law enforcement.

**Remarks:** If the case material states that more than one condition was present at the same time, enter the code with the lowest value. For example, if the driver was charged with “Too Fast for Conditions” **and** had a factor recorded for “Exceeded Speed Limit,” you would use code [3 \(Yes, Exceeded Speed Limit\)](#) because that has a lower value than [4 \(Yes, Too Fast for Conditions\)](#).

**Excessive or unsafe** speed can be indicated in the case material by the police issuing a citation for a speed offense, by their indicating a related or contributing factor, or through a description in the narrative. **For driving too slowly, or so as to impede traffic, see RELATED FACTORS - DRIVER LEVEL [045 \(Driving Less Than Posted Minimum\)](#).**

**0 (No)** is used if the case material does not indicate any speed related charges (violations, citations) and do not indicate any speed related factors.

**2 (Yes, Racing)** is used when two or more motor vehicles are engaged in a speed-related competition on the trafficway.

**3 (Yes, Exceeded Speed Limit)** is used when a motor vehicle is traveling above the posted/statutory speed limit on certain designated roadways and/or by certain types of vehicles (for trucks, buses, motorcycles, on bridge, at night, in school zone, etc.). **Do not compare an estimated travel speed to the posted speed limit for determining the correct attribute for this data element.** This attribute would apply in a case where law enforcement reports actual or estimated speed as unknown and still identifies exceeding the speed limit as a factor.

**4 (Yes, Too Fast for Conditions)** is used when a vehicle is traveling at a speed that was unsafe for the road, weather, traffic, or other environmental conditions at the time.

**5 (Yes, Specifics Unknown)** is used when it is known that Speed or Speeding applies but it cannot be determined which of the more specific attributes apply. When the only known information is “traveling at a high rate of speed” or “speed was a factor,” default to **5 (Yes, specifics unknown)**.

**9 (Reported as Unknown)** is used if the police state that the circumstances of the crash are unknown (i.e., it is unknown what factors, if any, may have been present at the time of the crash).

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                            | <b>THEN</b>                      |
|-----------------|--------------------------------------|----------------------------------|
| 1HFF            | DRIVER PRESENCE equals 0, 9,         | SPEEDING RELATED must be blank.  |
| D5A0            | VIOLATIONS CHARGED equals 21-25, 29, | SPEEDING RELATED must equal 2-5. |

## D23/NM 15 - Condition (Impairment) at Time of Crash

**FORMAT:** 2 numeric. Select All That Apply

**SAS NAME:** Drimpair.DRIMPAIR

### ELEMENT VALUES:

| Codes | Attributes                                                           |
|-------|----------------------------------------------------------------------|
| 00    | <a href="#">None/Apparently Normal</a>                               |
| 01    | <a href="#">Ill, Blackout</a>                                        |
| 02    | <a href="#">Asleep or Fatigued</a>                                   |
| 03    | <a href="#">Walking with a Cane or Crutches, etc.</a>                |
| 04    | <a href="#">Paraplegic or in a Wheelchair</a>                        |
| 05    | <a href="#">Impaired Due to Previous Injury</a>                      |
| 06    | <a href="#">Deaf</a>                                                 |
| 07    | <a href="#">Blind</a>                                                |
| 08    | <a href="#">Emotional (Depressed, Angry, Disturbed, etc.)</a>        |
| 09    | <a href="#">Under the Influence of Alcohol, Drugs, or Medication</a> |
| 10    | <a href="#">Physical Impairment - No Details</a>                     |
| 96    | <a href="#">Other Physical Impairment</a>                            |
| 98    | <a href="#">Not Reported</a>                                         |
| 99    | <a href="#">Reported as Unknown if Impaired</a>                      |

**Definition:** This element identifies physical impairments to this driver or non-motorist that may have contributed to the cause of the crash as identified by law enforcement.

**Remarks:** Select all that apply. These impairments can appear anywhere in the case material (in the narrative section, in the violations section, in a column entitled “Contributing Factors,” or “Driver Action,” etc.). See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

### 00 (None/Apparently Normal) is used when:

- When the case material make a positive statement that the individual was apparently normal, or “none” was indicated on the police crash report.
- When the case material does not indicate an impairment in an available field and not reporting an impairment in that field indicates **00 (None/Apparently Normal)**.
- When the investigating officer:
  - is limited in the number of factors that can be displayed, and
  - cannot select an impairment in addition to another factor relevant to the crash, and

- some other factor is selected, and
- no other indication of impairment exists in the case material.

- **For omission of information see [98 \(Not Reported\)](#) guidance below.**

**01 (Ill, Blackout)** is used when indicated in the case material. Enter this attribute even if the source of the illness or loss of consciousness is alcohol or drug related. Use this attribute if the driver or non-motorist had fainted and/or seizures were identified.

**02 (Asleep or Fatigued)** is used when indicated in the case material. Also, use this attribute when the investigating officer indicates the person was drowsy or sleepy. Alcohol or other drugs may be the source of this impairment.

**03 (Walking with a Cane or Crutches, etc.)** is used when non-motorist is walking with a cane, walker, knee scooter, or crutches when indicated in the case material.

**04 (Paraplegic or in a Wheelchair)** is used if this person is paraplegic or in a wheelchair. This includes motorized and non-motorized wheelchairs and *mobility aid* scooters.

**05 (Impaired Due to Previous Injury)** is used if the case material dictate this condition (e.g., if a person is involved in this crash subsequent to his/her involvement in a previous crash in which the person was injured). This attribute should be extremely rare.

**06 (Deaf)** is used when this person *is deaf or hard of hearing. The case material may also use the term hearing-impaired.*

**07 (Blind)** is used when this person *is blind or visually impaired.*

**08 (Emotional [Depressed, Angry, Disturbed, etc.])** is used when the person is arguing with someone, is having a disagreement, is depressed, and/or is emotionally upset.

**09 (Under the Influence of Alcohol, Drugs, or Medication)** is used when the investigating officer indicates that the individual was under the influence of alcohol, drugs, or medication. This attribute excludes interpretation of test results by the analyst/coder.

**10 (Physical Impairment - No Details)** is used when the case material indicate a physical impairment existed but provide no further details about the impairment.

**96 (Other Physical Impairment)** is used when the case material indicate that a physical impairment was involved but it isn't a listed attribute.

**98 (Not Reported)** *Check to see if [00 \(None/Apparently Normal\)](#) or [99 \(Reported as Unknown if Impaired\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS

attribute AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Impaired)** is used if the investigating officer states that the physical impairment of this person is unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                         | <b>THEN</b>                                                                                                         |

|-------|-------------------------------------|
| 999   | <a href="#">Reported as Unknown</a> |

#### **\* FARS ONLY ATTRIBUTES**

**Definition:** This element identifies factors related to this driver expressed in the case material.

**Remarks:** Code information provided in the case material. This is a nominal list only and does NOT imply a hierarchy.

**NOTE: RELATED FACTORS-DRIVER LEVEL SHOULD BE CODED ONLY FOR "IN-TRANSPORT VEHICLES" ([UNIT TYPE "1"](#)).**

**RELATED FACTORS FOR MOTOR VEHICLE OCCUPANTS OTHER THAN DRIVERS OF “IN-TRANSPORT” VEHICLES SHOULD BE CODED UNDER [RELATED FACTORS-PERSON \(MV OCCUPANT\) LEVEL](#) (INCLUDING ALL OCCUPANTS IN [UNIT TYPES 2, 3, AND 4](#)).**

**000 (None)** is used when no applicable related factors are noted in the case material.

***Physical/Mental Condition:***

**006 (Careless Driving, Inattentive Operation, Improper Driving, Driving Without Due Care)** is used when the case material include a factor or note a violation indicating careless driving.

**Examples include:**

- Driving without due care.
- Operating a motor vehicle in a careless manner.
- Failure to give full time and attention.
- Inattentive operation.

**008 (Aggressive Driving/Road Rage)** is used when the case material include a factor or note a violation identifying aggressive driving behavior. The officer must use the term “Aggressive” **or** “Road Rage” in describing this driver’s behavior.

**\*013 (Mentally Challenged)** is used when the case material identifies this person has an *intellectual, cognitive, or developmental disability*.

**\*004 (Reaction to or Failure to Take Drugs/Medication)** is used when the case material identifies that this driver had an allergic reaction to medication/drugs, a reaction to drug interaction (over the counter and/or prescribed), or if there is information identifying that the driver failed to take required medication.

**\*012 (Mother of Dead Fetus/Mother of Infant Born Post Crash)** is used when the case material identifies that this driver is the mother of a fetus that died in or as a result of this crash or it is identified that this driver gave birth after the crash whether the child survives or not. Note that for crash classification purposes, a fetus is considered to be part of a pregnant woman rather than a separate individual and, thus, is not counted as a separate occupant in the crash.

***Miscellaneous Factors:***

**\*015 (Seat Back Not in Normal Upright Position, Seat Back Reclined)** is used when the case material identifies that this driver’s seat back was not in a normal, safe driving position prior to the crash.

**018 (Traveling on Prohibited Trafficways)** is used when the case material identifies this driver was driving on an open trafficway that prohibited travel for the kind of vehicle they were operating. For example, driving a moped on an interstate, driving a truck where prohibited, or operating a vehicle with hazardous materials cargo where prohibited. For trucks or slower vehicles using the left lane when prohibited, use [28 \(Improper Lane Usage\)](#).

**\*019 (Legally Driving on Suspended or Revoked License)** is used when the case material identifies this driver’s license was suspended/revoked but they were legally driving at the time of

the crash. For example, occupational restricted licenses typically allow drivers to drive to work, school, community service, or certain other activities, with restrictions including the times of day, days of week, and areas to which they may drive. Drivers whose licenses have been suspended or revoked for certain alcohol- or drug-related offenses can apply for ignition interlock restricted licenses. These licenses permit them to drive if they use an ignition interlock device, which tests breath for alcohol consumption, installed in their car.

**020 (Leaving Vehicle Unattended with Engine Running. Leaving Vehicle Unattended in Roadway)** is used when the case material identifies this driver took improper actions where their vehicle was left in a location intentionally and the driver was not present in or in close proximity to the vehicle.

**Examples include:**

- Leaving the vehicle curbside or in a driveway with a running engine.
- Abandoning a non-running vehicle in the middle of traffic.
- “Double-parked.”
- “Parked on a bridge or tunnel.”
- “Parking within an intersection.”

**021 (Overloading or Improper Loading of Vehicle with Passengers or Cargo)** is used when the case material identifies this driver improperly loaded the vehicle occupants or cargo into or on the vehicle.

**Examples include:**

- The vehicle had more than 3 passengers in the front seat.
- There were people riding on the exterior of the vehicle.
- The vehicle was carrying occupants that were sitting or standing on the rails, tailgate of a pickup, or improperly sitting in the bed of a pickup.
- More than one person secured in a belt restraint.
- An unsecured or uncovered load violation.
- The vehicle’s trunk was open with extra-large cargo protruding.
- The case material states the vehicle was overweight, over length, or illegally or improperly oversize.

**022 (Towing or Pushing Improperly)** is used when the case material identifies this driver was operating the vehicle that was towing another vehicle with an improper connection (e.g., by rope or cable) or was pushing another vehicle in a dangerous manner (e.g., bumper to bumper).

**023 (Failure to Dim Lights or to Have Lights on When Required)** is used when the case material identifies this driver failed to use proper headlight beams, failed to reduce high beams for an approaching vehicle or when following another vehicle, or used fog lights when prohibited.

**Examples include:**

- The vehicle has its headlamps adjusted improperly causing glare.
- The vehicle failed to have its headlights on in a tunnel.
- A motorcycle not using lights as required.

**024 (Operating Without Required Equipment)** is used when the case material identifies this driver was operating the vehicle without a required piece of equipment or with required equipment being inoperable. For seatbelts, child restraints, and motorcycle helmets, do not use this attribute when there is indication that an available restraint was not used (i.e., Police Crash Report Restraint Use box is marked as “Not Used”).

**Examples include:**

- Defective or no lamps, brakes, mirrors, muffler, flares, wipers, horn, snow tires, chains, etc.
- A vehicle does not have extended side mirrors when required (e.g., when pulling a trailer).
- A vehicle driving in snow without snow tires when required.
- If the seatbelts have been removed from the vehicle.
- If there was no child safety seat(s) in the vehicle when required for the occupant(s).
- For a motorcycle rider that had no helmet with them when required by law.
- If the vehicle failed to have an air bag(s) reinstalled after a prior crash.

**\*026 (Following Improperly)** is used when the case material identifies this driver followed too closely.

**Examples include:**

- Following a fire truck too closely.
- Failure to maintain a safe passing distance between trucks.
- Following another vehicle in a caravan too closely to allow entry by a merging vehicle.
- Following too close, generally. Also, code for cases where the case material document the vehicle was following too closely for weather conditions.

**NOTE: 026 (Following Improperly)** denotes “after or before the process of lane change” while **027 (Improper or Erratic Lane Changing)** signifies “in the process.”

**\*027 (Improper or Erratic Lane Changing)** is used when the case material identifies this driver was making unsafe lane changes or failed to obey a “no lane change” sign or pavement

marking prohibiting lane change. This may also be used in cases where the officer states the vehicle was weaving in and out of traffic.

**\*028 (Improper Lane Usage)** is used when the case material identifies this driver failed to properly keep their vehicle in the appropriate lane of travel. This attribute does not apply to vehicles that run off the roadway, cross the median, *or exhibit control loss before crossing the centerline*. Also do not use this value for a vehicle that leaves its lane because of a previous impact or at the direction of a flagman or police officer. For situations where the vehicle is on the wrong side as a result of a passing maneuver, see [033 \(Passing Where Prohibited by Posted Signs, Pavement Markings, or School Bus Displaying Warning Not to Pass\)](#). See [051 \(Driving on Wrong Side of Two-Way Trafficway \[Intentional or Unintentional\]\)](#) for Driving on Wrong Side of Road.

**Examples include:**

- A vehicle that “drove left of center” striking an oncoming vehicle (includes both crossing a painted centerline and failing to maintain the proper side of a 2-lane roadway with no painted centerline.)
- A vehicle that goes straight in a turn lane.
- A vehicle that was using more than one lane on its side of a multi-lane highway.
- Trucks, buses, or slow vehicles failing to keep right for faster moving traffic.

**029 (Intentional Illegal Driving Off the Roadway)** is used when the case material identifies this driver was intentionally illegally driving in a location off the roadway (shoulder, median, roadside, etc.). This attribute should not be used when the vehicle enters one of these locations as part of an avoidance maneuver or as a result of a critical or harmful event. Also do not use this value for a vehicle that leaves its lane at the direction of a flagman or police officer.

**\*030 (Making Improper Entry to or Exit from Trafficway)** is used when the case material identifies this driver made an improper entry to or exit from the trafficway. For improper entry of the roadway from a parked or stopped position see [031 \(Starting or Backing Improperly\)](#).

**Examples include:**

- Driving onto or from a controlled access highway where prohibited.
- A vehicle entering a highway from a roadside location like a front yard, adjacent pasture, or field.
- A vehicle entering a highway on an exit ramp or exiting on an entrance ramp.

**\*031 (Starting or Backing Improperly)** is used when the case material identifies this driver improperly entered the roadway from a parked or stopped position or improperly backed the vehicle in the roadway.

**Examples include:**

- Making an unsafe start from a parked position.
- Backing up on a one-way roadway.
- Starting onto a highway from a parked position on the shoulder.

**032 (Opening Closure into Moving Traffic or While Vehicle is in Motion)** is used when the case material identifies this driver improperly opened their door into moving traffic. This would include opening the trunk while the vehicle is in-transport.

**\*033 (Passing Where Prohibited by Posted Signs, Pavement Markings, or School Bus Displaying Warning Not to Pass)** is used when the case material identifies this driver passed improperly by executing a passing maneuver where prohibited as designated by traffic controls or rules of the road.

**Examples include:**

- A vehicle passing a stopped school bus.
- A vehicle crossing over the solid line to pass another vehicle.
- Passing a vehicle stopped to allow a pedestrian movement.

**\*034 (Improper Passing Location)** is used when the case material identifies this driver was passing *in a prohibited location*.

**Examples include:**

- *A vehicle passing on the right side where it is prohibited.*
- *A vehicle passing on the right or left shoulder, emergency lane, or roadside.*
- *A vehicle passing in the median.*
- *A motorcycle passing on the left or right within the same lane as the vehicle it is passing (in a State where lane splitting, filtering, and/or sharing is not permitted).*  
*NOTE: If your State does not prohibit lane splitting, filtering, and/or sharing, do NOT use 034 (Improper Passing Location) for this situation.*

**\*035 (Passing with Insufficient Distance, or Inadequate Visibility, or Failing to Yield to Overtaking Vehicle)** is used when the case material identifies this driver exercised faulty judgment when passing or being passed.

**Examples include:**

- A vehicle passing uphill or in a curve that limits visibility.
- Cutting off the other vehicle while passing or being passed.

**036 (Operating the Vehicle in an Erratic, Reckless, or Negligent Manner)** is used when the case material identifies this driver was operating the vehicle in an erratic, reckless, or negligent manner. These are circumstances where the driver is engaged in a driving behavior with willful or wanton disregard for safety. This attribute can be used in conjunction with other factors but must be explicitly stated on the police record.

**Examples include:**

- Driving erratically.
- Erratic lane changing.
- Suddenly changing speed.
- *Motorcyclist doing wheelies (aka "popping" wheelies)*

**016 (Police or Law Enforcement Officer)** is used when the case material identifies this driver was a Federal, State, or local law enforcement officer working at the time of the crash. This attribute also includes military and park police, border patrol, and all other sworn law enforcement officers.

**037 (Police Pursuing This Driver or Police Officer in Pursuit)** is used when the case material identifies this driver was fleeing from or attempting to elude the police, or this driver is a police officer engaged in a “pursuit” that is active at the time of crash. For a case where both the fleeing driver and pursuing officer are in-contact vehicles, this factor is used for both drivers. Identify the officer using factor [016 \(Police or Law Enforcement Officer\)](#). Also see RELATED FACTORS-CRASH LEVEL [020 \(Police Pursuit Involved\)](#).

**Definition of Police Pursuit:** A pursuit is an event that is initiated when a law enforcement officer, operating an authorized emergency vehicle, gives notice to stop (either through the use of visual or audible emergency signals or a combination of emergency devices) to a motorist who the officer is attempting to apprehend, and that motorist fails to comply with the signal by either maintaining his/her speed, increasing speed, or taking other evasive action to elude the officer’s continued attempts to stop the motorist. A pursuit is terminated when the motorist stops, or when the attempt to apprehend is discontinued by the officer, or at the direction of a competent authority.

**094 (Emergency Medical Services Personnel)** is used when the case material identifies that this person was described as emergency medical services (EMS) personnel. This includes personnel located in the cab and in the treatment compartment of an ambulance.

**095 (Fire Personnel)** is used when the case material identifies that this person was fire personnel.

**096 (Tow Operator)** is used when the case material identifies that this person was an operator of a tow truck.

**097 (Transportation (i.e., maintenance workers, safety service patrol operators, etc.))** is used when the case material indicate this person was working to assist with detouring traffic, maintaining roadway damage, or a safety service patrol operator, etc.

**\*038 (Failure to Yield Right-of-Way)** is used when the case material identifies this driver failed to yield the right-of-way.

**Examples include:**

- Failure to yield to pedestrian in a crosswalk.
- Failure to yield at an intersection or merge.
- Failure to yield to emergency vehicles.
- Failure to yield to streetcar already in intersection.

**\*039 (Failure to Obey Actual Traffic Signs, Traffic Control Devices, or Traffic Officers, Failure to Obey Safety Zone Traffic Laws)** is used when the case material identifies this driver failed to obey an applicable traffic control device (sign or signal), traffic officer, or traffic safety zone laws. If a driver stops as required but then fails to yield, use code [038 \(Failure to Yield Right-of-Way\)](#) and not **039 (Failure to Obey Actual Traffic Signs, Traffic Control Devices, or Traffic Officers, Failure to Obey Safety Zone Traffic Laws)**.

**Examples include:**

- Failure to obey flashing signal.
- Violation of “No Turn on Red.”
- Failure to obey lane use control signal.
- Failure to obey stop signs.
- Failure to obey yield sign (use both codes [038 \(Failure to Yield Right-of-Way\)](#) and **039 (Failure to Obey Actual Traffic Signs, Traffic Control Devices, or Traffic Officers, Failure to Obey Safety Zone Traffic Laws)**).
- Passing around railroad gates.
- When vehicle does not stop when required by a traffic signal.

**\*040 (Passing Through or Around Barrier)** is used when the case material identifies this driver was driving in a prohibited area (play street, construction, etc.). This would denote “demarcated” areas. For driving around a railroad gate use [039 \(Failure to Obey Actual Traffic Signs, Traffic Control Devices, or Traffic Officers, Failure to Obey Safety Zone Traffic Laws\)](#).

**\*041 (Failure to Observe Warnings or Instructions on Vehicles Displaying Them)** is used when the case material identifies this driver failed to heed warnings or follow instructions displayed on other vehicles.

**Examples include:**

- Construction instructions such as arrows directing traffic mounted on a vehicle.
- Instructions on or warnings by emergency vehicles (ambulances, fire trucks, police cars).
- Failure to observe a wide right-turn warning on trucks or buses.
- Failure to heed hazard lights on a disabled vehicle or a school bus arm.

**\*042 (Failure to Signal Intentions)** is used when the case material identifies this driver failed to signal their intentions. This attribute includes a failure to signal by either lamp turn signal or hand.

**\*045 (Driving Less Than Posted Minimum)** is used when the case material identifies this driver was driving too slowly, or so as to impede traffic.

**\*047 (Making Right Turn from Left-Turn Lane, Left Turn from Right-Turn Lane)** is used when the case material identifies this driver was making an improper turn from a turn lane. To

distinguish from [027 \(Improper or Erratic Lane Changing\)](#) and [028 \(Improper Lane Usage\)](#), police officer must indicate the driver's intention to turn to use this attribute.

**\*048 (Making Other Improper Turn)** is used when the case material identifies this driver made a turn that was improper because it was unsafe, poorly executed, or in bad judgment. This attribute excludes turns that are improper because they are prohibited (e.g., No Right on Red, turning left in violation of a traffic signal). A roadway departure is not an indication of an improper turn in and of itself.

**Examples include:**

- A “too wide” right or left turn.
- An unsafe U-turn (from the shoulder, etc.).

**050 (Driving Wrong Way on One-Way Trafficway)** is used when the case material identifies this driver was driving in the wrong direction on a one-way trafficway. If this is a divided highway, although each side is “one-way,” driving against traffic should be coded as **051 (Driving on Wrong Side of Two-Way Trafficway [Intentional or Unintentional])**. If the vehicle was going the wrong way on an entrance or exit ramp, also use [030 \(Making Improper Entry to or Exit from Trafficway\)](#).

**051 (Driving on Wrong Side of Two-Way Trafficway [Intentional or Unintentional])** is used when the case material identifies this driver was established in and driving on the wrong side of the highway. “Unintentional” means they may not be aware they are on the wrong side. For situations where a driver unintentionally crosses the centerline, see [028 \(Improper Lane Usage\)](#). For situations where the vehicle is on the wrong side as a result of a passing maneuver, see [\\*033 \(Passing Where Prohibited by Posted Signs, Pavement Markings, or School Bus Displaying Warning Not to Pass\)](#), or [\\*035 \(Passing with Insufficient Distance, or Inadequate Visibility, or Failing to Yield to Overtaking Vehicle\)](#).

**Examples include:**

- Driving the wrong way/on the wrong side of a divided trafficway.
- Driving on the wrong side of an undivided trafficway.
- Driving the wrong way on a Rotary Intersection.
- Driving on the left half of approaching bridge or tunnel.

**\*052 (Operator Inexperience)** is used when the case material identifies this driver lacks experience operating the vehicle they were driving at the time of the crash. Should be expressed by officer, driver, or passenger and not presumed based on age, rental status, or State of residence.

**Examples include:**

- A *novice* driver.
- A driver inexperienced in the operation of a large truck or bus (based on the judgment of the police officer).
- A person driving a rental car where they are unfamiliar with the vehicle.

**\*053 (Unfamiliar with Roadway)** is used when the case material identifies this driver is unfamiliar with the area/location where they were driving when the crash occurred. Should be expressed by officer, driver, or passenger and not presumed based on age, rental status, or State of residence.

**Examples include:**

- A driver from out-of-State unfamiliar with area.
- A driver operating on a new stretch of road or section of road altered because of construction and/or detour.

**054 (Stopped in Roadway [Vehicle Not Abandoned])** is used when the case material identifies this driver stopped their vehicle in the roadway/travel lanes. It is intended to capture an unusual condition where a vehicle is stopped in the roadway with the driver present in or in close proximity to the vehicle. It includes both a vehicle in the process of stopping and “stopped” vehicles. It **excludes** typical “stopping” situations such as stopping in/for traffic, waiting to turn, or stopping for a traffic control.

**Examples include:**

- A vehicle disabled in a prior crash.
- A vehicle with a flat tire.
- A vehicle that stops for debris in the roadway, etc.

**055 (Improper Management of Vehicle Controls (SPECIFY:))** is used for driver errors related to accelerating/braking/gear selection, etc. (reverse instead of forward, forward instead of reverse, accelerator instead of brake, unspecified pedal error, etc.).

**\*Note: For attributes with a “Specify:” designation,** a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**056 (Object Interference with Vehicle Controls (SPECIFY:))** is used for items reported to have interfered with the driver’s operation of the vehicle controls (footwear interfered with pedals, floor mat interfered with pedals, loose cargo interfered with pedals, etc.).

**\*Note: For attributes with a “Specify:” designation,** a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**057 (Driving with Tire-Related Problems)** is used when the officer noted this driver was driving with a “donut”/spare tire, improperly sized tire(s), driving on run flats in an air-out situation, etc. ***See the table below for comparison examples between this attribute and CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE code 01 (Tires).***

**Example Coding Situations for RELATED FACTORS - DRIVER LEVEL 057 (Driving with Tire Related problems) and CONTRIBUTING CIRCUMSTANCES MOTOR VEHICLE 01 (Tires)**

| <i>Example Situations</i>                                                                                             | <i>RELATED FACTORS -<br/>DRIVER LEVEL 057<br/>(Driving with Tire-Related<br/>Problems)</i> | <i>CONTRIBUTING<br/>CIRCUMSTANCES<br/>MOTOR VEHICLE <u>01</u><br/>(Tires)</i> |
|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <i>Officer notes driving with a “donut” or spare tire on the vehicle.</i>                                             | X                                                                                          |                                                                               |
| <i>Officer notes improperly sized tires on the vehicle</i>                                                            | X                                                                                          |                                                                               |
| <i>Officer notes the tires are “run flat” tires and have been punctured but the Driver was still driving on them.</i> | X                                                                                          |                                                                               |
| <i>Officer notes “Tires” in a Contributing Circumstances report field.</i>                                            |                                                                                            | X                                                                             |
| <i>Officer notes bald tires or insufficient tread on the vehicle.</i>                                                 |                                                                                            | X                                                                             |
| <i>Officer notes lost or losing re-tread on a tire or tires on the vehicle.</i>                                       |                                                                                            | X                                                                             |
| <i>Officer notes improper tire pressure or under-inflated tires (not “run flat” tires in an air out situation)</i>    |                                                                                            | X                                                                             |
| <i>Officer notes bald tires and a “donut” or spare tire on the vehicle.</i>                                           | X                                                                                          | X                                                                             |

**058 (Overcorrecting)** is used when the case material identifies this driver “overcorrected” based on the judgment of the police officer. This must be stated by the officer in the narrative or police crash report field to be coded. Overcorrecting and Oversteering are technically different, but this attribute may be selected for a reported combination of the two (e.g., overcorrecting/oversteering) on the police crash report.

**059 (Getting Off/Out of a Vehicle)** is used when the case material identifies this driver was attempting to exit the vehicle when involved in the crash. It applies for either moving or non-moving vehicles.

**060 (Alcohol and/or Drug Test Refused)** is used when the officer notes that this person refused to take an alcohol and/or a drug test. Refusing a test does not necessarily mean that a test was not given. It is possible that after a refusal, the officer may have obtained a warrant or some other authorization to administer a test post-refusal. This includes when the person initially refuses and later consents. Because of this, it is possible to code **060 (Alcohol and/or Drug Test Refused)** and also code an actual test with results for the same person.

**010 (Looked But Did Not See)** is used when the driver is paying attention to driving (not distracted), but does not see the relevant vehicle, object, etc. This attribute should be used when a

driver has an opportunity to take some action prior to impact, but the driver takes no action and no distractions apply under [DRIVER DISTRACTED BY](#). This situation frequently occurs when an overtaking vehicle is in the driver's "blind spot" or at intersections when a crossing vehicle is not noticed.

### ***Skidding, Swerving, Sliding Due To:***

This set of attributes is applicable to the driver that attempted to avoid one of the following or whose ability to control the vehicle was affected by one of the following.

**\*077 (Severe Crosswind)** is used when the case material identifies this driver's ability to control the vehicle was affected by severe crosswinds.

**\*078 (Wind from Passing Truck)** is used when the case material identifies this driver's ability to control the vehicle was affected by winds produced by a passing truck.

**\*079 (Slippery or Loose Surface)** is used when the case material identifies this driver's ability to control the vehicle was affected by the surface composition of the roadway and/or the condition of that composition. Not to be used when the surface is slippery due to environment conditions such as rain, ice, or snow (see [087 \(Ice, Snow, Slush, Water, Sand, Dirt, Oil, or Wet Leaves on Road\)](#)).

#### **Examples include:**

- A slippery surface that is old or worn resulting in loose gravel on the roadway.
- Blacktop that is slick as a newly paved surface.

**\*080 (Tire Blowout or Flat)** is used when the case material identifies this driver's ability to control the vehicle was affected by a tire blowout or flat.

**\*081 (Debris or Objects in Road)** is used when the case material identifies this driver attempted to avoid or lost control as a result of debris in the road. Examples would include nails, glass, trash cans, tire retread, trash, dead animals, pile of sand, barricades, etc.

**\*082 (Ruts, Holes, Bumps in Road)** is used when the case material identifies this driver attempted to avoid or lost control as a result of road surface anomalies such as ruts, holes, dips, or bumps.

**\*083 (Live Animals in Road)** is used when the case material identifies this driver attempted to avoid or lost control as a result of a live animal(s) that was in the road.

**\*084 (Vehicle in Road)** is used when the case material identifies this driver attempted to avoid or lost control as a result of another vehicle in the road. This includes both contact and non-contact vehicles that remain at the scene.

**\*085 (Phantom Vehicle)** is used when the case material identifies this driver attempted to avoid or lost control as a result of a non-contact vehicle that left the scene as described by the police officer.

**\*086 (Pedestrian, Pedal Cyclist, or Other Non-Motorist)** is used when the case material identifies this driver attempted to avoid or lost control as a result of a pedestrian, a pedalcyclist, or other type of non-motorist.

**\*087 (Ice, Snow, Slush, Water, Sand, Dirt, Oil, or Wet Leaves on Road)** is used when the case material identifies this driver's ability to control the vehicle was affected by a substance on the roadway that caused the roadway to be slick, which may interfere with the traction of the vehicle. This attribute does not include part of the roadway composition. For cases involving roadway composition issues, see [079 \(Slippery or Loose Surface\)](#).

**\*088 (Trailer Fishtailing or Swaying)** is used when the case material identifies this driver's ability to control the vehicle was affected by a trailer fishtailing or swaying. This condition may or may not result in a jackknife.

***Special Circumstances (073, 074, 089, 091):***

**\*073 (Driver Has Not Complied with Learner's Permit or Intermediate Driver License Restrictions [GDL Restrictions])** is used when the case material identifies this driver was a young driver and was not in compliance with a Learner's Permit or Intermediate Driver License restriction under a State's Graduated Driver's License (GDL) program.

**Examples include:**

- Nighttime driving restrictions (e.g., midnight until 6:00 am).
- Unsupervised driving restrictions (e.g., the driver must have a passenger over the age of 21 to legally drive the vehicle).
- Passenger Restriction (e.g., the driver is only allowed one other passenger in the vehicle when driving).

This should **not** be used for restrictions for eyeglasses, lenses, equipment, or other physical restrictions (see **074 (Driver Has Not Complied with Physical or Other Imposed Restrictions [not including GDL Restrictions])**).

**\*074 (Driver Has Not Complied with Physical or Other Imposed Restrictions (not including GDL Restrictions))** is used when the case material identifies this driver did not comply with physical or other imposed license restrictions.

**Examples include:**

- Driving without corrective lenses when required.
- Driving without required equipment (e.g., automatic transmission, adaptive controls, etc.).
- Violating special privileges on a suspended/revoked license for other than permitted activities (e.g., driving permitted only to and from work). Not to be used for general "driving on a suspended or revoked license."
- Driving vehicle without "Interlock System" when required.

**\*089 (Driver has a Driving Record or Driver's License from More than One State)** is used when the case material identifies this driver had any combination of a State or record in more than one State. This is coded regardless of the status of the license or the driving privilege of the driver at the time of the crash.

**091 (Non-Traffic Violation Charged [Manslaughter, Homicide, or Other Assault Offense Committed Without Malice])** is used when the case material identifies this driver will receive “Criminal” charges such as intoxicated assault or vehicular manslaughter. It would exclude other criminal offenses such as hit-and-run or failure to render aid at the scene of a crash.

### **Unknown**

**999 (Reported as Unknown)** is used when the circumstances surrounding the crash are unknown and reported as “unknown” by the investigating officer.

### **\*FARS ONLY ATTRIBUTES**

#### **Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                   | <b>THEN</b>                                                                                                                         |

## Precrash Data Overview

Precrash data elements are completed for each of the in-transport motor vehicles in the case. This means that the entire crash is first completed from the perspective of one vehicle, then from the perspective of a second vehicle, if any, and so forth. The precrash data elements are the following.

- [Driver Distracted By](#)
- [Pre-Event Movement \(Prior to Recognition of Critical Event\)](#)
- [Critical Precrash Category](#)
- [Critical Precrash Event](#)
- [Attempted Avoidance Maneuver](#)
- [Pre-Impact Stability](#)
- [Pre-Impact Location](#)
- [Crash Type](#)

The precrash data elements are designed to identify the following.

- What was this vehicle doing just prior to the critical precrash event?
- What made this vehicle's situation critical?
- What was the avoidance response, if any, to this critical situation?
- What was the movement of the vehicle just prior to impact?

The most important determination that must be made for each in-transport motor vehicle is: what was this vehicle's [CRITICAL PRECRASH EVENT](#), (i.e., what action by this vehicle, another vehicle, person, animal, or non-fixed object was critical to this vehicle's crash?). Once the critical event is determined, the remaining precrash data elements are coded relative to this selected [CRITICAL PRECRASH EVENT](#).

Do not consider culpability as a factor for determining precrash data. Many crash scenarios will suggest fault, but this is considered coincidental rather than by design.

### ***Critical Crash Envelope***

The critical crash envelope begins at the point where:

1. the driver recognizes an impending danger (e.g., deer runs into the roadway), OR
2. the vehicle is in an imminent path of collision with another vehicle, pedestrian, pedalcyclist, other non-motorist, object, or animal.

The critical crash envelope ends when:

1. all three:
  - a. the driver has made a successful avoidance maneuver, and
  - b. has full steering control, and
  - c. the vehicle is tracking;

**OR**

2. the driver's vehicle impacts another vehicle, pedestrian, pedalcyclist, other non-motorist, object, or animal.

*See the [Coding Guide: Critical Crash Envelope Timeline](#) for helpful information.*

### **Simple Single Critical Crash Envelope**

Most crashes involve only a single critical crash envelope in which the object contacted is captured under the [CRITICAL PRECRASH EVENT](#), (e.g., a vehicle is traveling straight on a roadway and a deer runs into the roadway and is struck by the vehicle). This scenario, and similar ones, are very straightforward and will not present many problems.

### **Complex Single Critical Crash Envelope**

However, some single critical crash envelopes are more complex.

**Example A:** A driver avoids one obstacle and immediately impacts another vehicle, person, object, or animal. Because immediate is defined as **not** having an opportunity, or sufficient time, to take any additional avoidance actions, the [CRITICAL PRECRASH EVENT](#) is related to the vehicle, person, object, or animal that the driver successfully avoided instead of the vehicle's first harmful event (i.e., its impact); see [example 3](#) and [example 5](#).

**Example B:** The driver avoids an obstacle only to (a) lose steering control and/or (b) have the vehicle stop tracking, and the vehicle subsequently impacts another vehicle, person, object, or animal.

Regardless of whether the driver:

1. attempted to regain steering control,
2. caused the vehicle to resume a tracking posture, or
3. avoided the impacted vehicle, person, object, or animal,

the Critical Precrash Event is similarly related to the vehicle, person, object, or animal that the driver successfully avoided because the driver's critical crash envelope was never stabilized.

In both examples above, the [ATTEMPTED AVOIDANCE MANEUVER](#) records the successful action taken to avoid the [CRITICAL PRECRASH EVENT](#).

Vehicles that are not involved in an impact with another vehicle, person, object, or animal in the sequence of crash events (that define this crash) are not included.

The coding order for a single critical crash envelope is illustrated in [Figure 22](#).

Figure 22: Typical Order of a Single Critical Crash Envelope

### Critical Crash Envelopes

When a case involves more than one critical crash envelopes, select only the final critical crash envelope. In this situation, code the element [PRE-EVENT MOVEMENT \(PRIOR TO RECOGNITION OF CRITICAL EVENT\)](#) as: [17 \(Successful avoidance maneuver to a previous critical event\)](#). The final critical crash envelope is the one that resulted in this vehicle's first harmful event (i.e., its impact) as shown in [Figure 23](#).

Figure 23: Typical Order of Multiple Critical Crash Envelopes

When there is doubt as to whether this vehicle had experienced a complex single, or multiple critical crash envelopes, choose the Critical Precrash Category/Event, to the vehicle, person, object, or animal that the driver successfully avoided (i.e., default to Complex Single). See [Complex Single Critical Crash Envelope](#) examples **A** and **B** above.

The following pages have a method protocol, a [flowchart](#) illustrating the proper method and protocol for determining the precrash data elements, 10 [Precrash General Rules](#), and 18 [examples](#) of various crash event sequences that contain one or more critical crash envelopes.

## **Method Protocol**

Consider the information obtained from the police report and any supplemental documents as inputs to your decision-making process.

1. Determine [CRITICAL PRECRASH CATEGORY](#) / [CRITICAL PRECRASH EVENT](#).

What action by this vehicle, another vehicle, person, animal, or object was critical to this driver becoming involved in the crash (i.e., use the “**BUT FOR**” \* test)?

### **FOR EXAMPLE:**

- “**But for**” Vehicle # going left-of-center, this vehicle would not have been involved in this crash.
- “**But for**” having entered into the intersection, this vehicle would not have been involved in this crash.

ASK yourself questions (a) through (f) below. Proceed through each question that applies to the crash you are researching. Stop when the answer to the questions is “Yes.” This is the [CRITICAL PRECRASH CATEGORY](#).

- a. Did the vehicle exhibit a control loss?
  - b. Does the evidence suggest that the vehicle was in an environmentally dangerous position?
  - c. Was another vehicle “in” this vehicle’s lane?
  - d. Was another vehicle entering into this vehicle’s lane?
  - e. Was a pedestrian, pedalcyclist, or other non-motorist in or approaching this vehicle’s path?
  - f. Was an animal in or approaching this vehicle’s path or was an object in this vehicle’s path?
2. Determine [DRIVER DISTRACTED BY](#).
  3. Determine [PRE-EVENT MOVEMENT \(PRIOR TO RECOGNITION OF CRITICAL EVENT\)](#).
  4. Determine [ATTEMPTED AVOIDANCE MANEUVER](#).  
What does your information indicate that the driver tried to do to avoid the crash?
  5. Determine [PRE-IMPACT STABILITY](#).
  6. Determine [PRE-IMPACT LOCATION](#).

## Precrash Methodology Flowchart

## **Precrash General Rules**

1. [ATTEMPTED AVOIDANCE MANEUVER](#) assesses what the driver's action(s) was during the critical crash envelope in response to realization of impending danger.
2. The mere presence of a traffic control signal/sign typically does not make the situation critical when determining [CRITICAL PRECRASH EVENT](#).

For example: A single vehicle approaches a stop sign and departs the right side of the road impacting a tree, in an attempt to avoid passing through the intersection. The sign has no bearing and therefore, does not make the situation critical.
3. When you know the [CRITICAL PRECRASH CATEGORY](#), but are unable to select a specific [CRITICAL PRECRASH EVENT](#), use the following guideline:

Default to one of the "Other" or "Unknown" attributes within each CRITICAL PRECRASH EVENT category, rather than coding the entire CRITICAL PRECRASH CATEGORY as "Other critical precrash event."
4. If control is lost due to driver illness such as heart attacks, diabetic comas, etc., then CRITICAL PRECRASH EVENT should be coded as [08 \(Other cause of control loss \(Specify:\)\)](#).
5. When coding [CRITICAL PRECRASH CATEGORY](#) as [1 \(This vehicle loss of control\)](#), the loss of control must have occurred prior to the driver doing any avoidance maneuver. If the driver attempts a maneuver (i.e., brakes, steers, etc.) as a result of the driver's perception of a vehicle, object, pedestrian, or non-motorist, then select the vehicle, object, pedestrian, or non-motorist as the critical event because that is what made the situation critical. If the vehicle is in a yaw prior to the driver taking an avoidance action, then loss-of-control is what made it critical (critical curve scuff, hydroplaning, etc.).
6. When determining CRITICAL PRECRASH CATEGORY/EVENT if you do not know from available sources which driver had the right-of-way at a controlled or uncontrolled intersection, then use the following as a guideline:
  - a. If the junction is controlled by a three-way/four-way stop sign, or is uncontrolled, then use the common rule that the vehicle on the right has the right-of-way for determining encroachment.
  - b. If the junction is controlled by an on-colors traffic control device, and both drivers claim a green light, then both vehicles are in an environmentally dangerous position, and Critical Precrash Event for both vehicles should be [2 \(This Vehicle Traveling\)](#) (CRITICAL PRECRASH CATEGORY) [17 \(Crossing over \(passing through\) junction\)](#) (CRITICAL PRECRASH EVENT).
7. When two vehicles are initially traveling on the same trafficway and one executes a left turn with the right-of-way (i.e., green arrow), use [4 \(Other Motor Vehicle Encroaching Into Lane\)](#) - [63 \(From opposite direction-over right lane line\)](#) for the turning vehicle's critical event. This applies to [Crash Types 68, 69](#).

If the vehicles were initially on different trafficways (Crash Types [76, 77](#) and [82, 83](#)) the critical event for the vehicle turning left with the right-of-way should be [4 \(Other Motor Vehicle Encroaching Into Lane\)](#) - [66 \(From crossing street across path\)](#).

8. “Fixed” objects (e.g., trees, poles, fire hydrants, etc.) cannot be in the roadway.
9. A motor vehicle is stopped in a travel lane and is impacted by another motor vehicle ricocheting off a vehicle. The CRITICAL PRECRASH EVENT for the vehicle struck by the ricocheting vehicle is in the [category](#) of either: [3 \(Other Motor Vehicle In Lane\)](#) or [4 \(Other Motor Vehicle Encroaching Into Lane\)](#).
10. [PRE-IMPACT STABILITY](#) should be indicated as [1 \(Tracking\)](#) if the following are met:
  - a. no skid marks are present on the diagram or mentioned in the narrative,
  - b. the case material does not indicate skidding, **AND**
  - c. the vehicle did not rotate 30° or more either clockwise or counterclockwise.

**Note regarding PRE-IMPACT STABILITY:**

If the case material does not provide enough information (in the diagram, narrative, etc.) to determine precrash stability, code [9 \(Precrash Stability Unknown\)](#).

Trafficway and its component definitions (i.e., roadway, road, shoulder, and median) can be found in the [ANSI D16.1 Manual on the Classification of Motor Vehicle Traffic Crashes](#).

***Precrash Examples***

**Example 1**

**Example 1 Diagram**

Vehicle 1 was traveling northbound on a four-lane roadway. Vehicle 2 was traveling westbound on an intersecting four-lane roadway. The intersection was controlled by traffic signals. Both vehicles entered the intersection and the right side of Vehicle 1 was struck by the front of Vehicle 2. Police could not determine which vehicle had the right-of-way, both drivers claimed to have a green light. The driver of Vehicle 1 reported that he never saw Vehicle 2 approaching.

“None” was identified by police on the crash report for both drivers in the data element for recording driver distractions. The police also indicated that no skid marks were present at the scene associated with Vehicle 1, but there were pre-impact skids present at the scene associated with Vehicle 2 and that this supported the driver’s statement that he attempted to stop when he saw Vehicle 1 in his path.

| Precrash Element                             | Vehicle 1                                | Vehicle 2                                             |
|----------------------------------------------|------------------------------------------|-------------------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                           | Not Distracted                                        |
| <a href="#">Pre-Event Movement</a>           | Going Straight                           | Going Straight                                        |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Traveling                   | This Vehicle Traveling                                |
| <a href="#">Critical Precrash (Event)</a>    | Crossing Over (Passing Through) Junction | Crossing Over (Passing Through) Junction              |
| <a href="#">Attempted Avoidance Maneuver</a> | No Avoidance Maneuver                    | Braking                                               |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                 | Skidding Longitudinally Rotation Less Than 30 Degrees |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane           | Stayed in Original Travel Lane                        |
| <a href="#">Crash Type</a>                   | 87                                       | 86                                                    |

In this example, the **Critical Crash Envelope** for Vehicle 1 (V<sub>1</sub>CCE) begins at the point where it is in an imminent collision path with Vehicle 2. The **Critical Crash Envelope** for Vehicle 2 (V<sub>2</sub>CCE) begins at the point where the drivers recognize the impending danger. The **Critical Crash Envelopes** end at the point of impact with the other vehicle.

Since it could not be determined which vehicle had the right-of-way, the **Critical Event** is determined using [Precrash General Rule #6b](#). It states, “If the junction is controlled by an on-colors traffic control device, and both drivers claim a green light, then both vehicles are in an environmentally dangerous position and the **Critical Event** for both vehicles should be [This Vehicle Traveling \(Critical Event - Precrash \(Category\)\) Crossing Over \(Passing Through\) Junction \(Critical Event - Precrash \(Event\)\)](#).”

Vehicle 1’s **Pre-Impact Stability** was [Tracking](#) based on [Precrash General Rule #10](#). [Skidding Longitudinally Rotation Less Than 30 Degrees](#) was selected for Vehicle 2’s **Pre-Impact Stability** because tire marks were identified on the report and there was no indication of rotation.

It is important to keep in mind the type of traffic control (traffic signal versus stop sign) when determining right-of-way. Using the same scenario but substituting stops signs for the traffic signals, would change the **Critical Event** for both vehicles. [Precrash General Rule #6a](#) states, “If the junction is controlled by a 3-way or 4-way stop sign, or is uncontrolled, the vehicle on the right [Vehicle 2 in this case] would have had the right-of-way for determining encroachment.”

## Example 2

### Example 2 Diagram

Vehicle 1 and Vehicle 2 are traveling in opposite directions on the same roadway. A police car (with lights activated) is making a traffic stop on the north side of the road. The driver of Vehicle 1 is looking at the activity on his left. Before he can react, Vehicle 1 crosses the centerline and strikes the front of Vehicle 2. The driver of Vehicle 2 also noticed the police activity, but he was attentive to the slowing traffic ahead. Vehicle 2 attempted to avoid the crash by braking and steering right.

| Precrash Element                             | Vehicle 1                                        | Vehicle 2                                   |
|----------------------------------------------|--------------------------------------------------|---------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Distracted by Outside Person, Object, or Event   | Not Distracted                              |
| <a href="#">Pre-Event Movement</a>           | Going Straight                                   | Going Straight                              |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Traveling                           | Other Motor Vehicle Encroaching Into Lane   |
| <a href="#">Critical Precrash (Event)</a>    | Over the Lane Line on Left Side of Travel Lane   | From Opposite Direction Over Left Lane Line |
| <a href="#">Attempted Avoidance Maneuver</a> | No Avoidance Maneuver                            | Braking and Steering Right                  |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                         | Tracking                                    |
| <a href="#">Pre-Impact Location</a>          | Stayed on Roadway, But Left Original Travel Lane | Stayed in Original Travel Lane              |
| <a href="#">Crash Type</a>                   | 50                                               | 51                                          |

In this example, Vehicle 1 has one **Critical Crash Envelope** (V<sub>1</sub>CCE) that begins at the point where Vehicle 1 is in an imminent collision path with Vehicle 2. Vehicle 1's **Critical Crash Envelope** ends at the point of impact with Vehicle 2.

Vehicle 2's **Critical Crash Envelope** (V<sub>2</sub>CCE) begins when the driver recognizes impending danger and ends at the point of impact with Vehicle 1.

When determining **Crash Type**, it is important to keep in mind that some **Crash Configurations** are plane of impact dependent, while others are not. In this case the **Crash Type** for Vehicle 1 and Vehicle 2 is [“50” and “51,” Head-On](#) respectively since it involved the front planes of both vehicles. If the collision had involved the side of one or both of the vehicles, then the **Crash Type** would have been [“64” and “65,” Angle/Sideswipe](#).

### Example 3

#### Example 3 Diagram

Vehicle 1 and Vehicle 2 are traveling in opposite directions on the same roadway. A non-contact vehicle (NCV) is parked in front of a non-contact heavy truck on the road shoulder and suddenly enters the roadway into Vehicle 1’s travel lane. The driver of Vehicle 1 instantly brakes, and steers left to avoid the non-contact vehicle. Vehicle 1 crosses over the center line and **immediately** impacts the front of Vehicle 2. Vehicle 2 had no avoidance maneuvers. “None” was identified by police on the crash report for both drivers in the data element for recording driver distractions.

| Precrash Element                             | Vehicle 1                                        | Vehicle 2                                   |
|----------------------------------------------|--------------------------------------------------|---------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                                   | Not Distracted                              |
| <a href="#">Pre-Event Movement</a>           | Going Straight                                   | Going Straight                              |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle Encroaching Into Lane        | Other Motor Vehicle Encroaching Into Lane   |
| <a href="#">Critical Precrash (Event)</a>    | From Parking Lane/Shoulder                       | From Opposite Direction Over Left Lane Line |
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Left                        | No Avoidance Maneuver                       |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                         | Tracking                                    |
| <a href="#">Pre-Impact Location</a>          | Stayed on Roadway, But Left Original Travel Lane | Stayed in Original Travel Lane              |
| <a href="#">Crash Type</a>                   | 58                                               | 59                                          |

In this example, Vehicle 1 has one **Critical Crash Envelope** (V<sub>1</sub>CCE). Vehicle 1’s **Critical Crash Envelope** involved a successful avoidance of a non-contact vehicle and resulted in an **immediate** impact to Vehicle 2. Vehicle 1’s **Critical Crash Envelope** was initiated by the non-contact vehicle; afterwards there was no opportunity for subsequent avoidance actions. Therefore, the encroachment of the non-contact vehicle into Vehicle 1’s travel lane is coded as the **Critical Event - Precrash (Event)** for Vehicle 1. Vehicle 1’s **Attempted Avoidance Maneuver** is coded as the action taken to avoid the non-contact vehicle.

Vehicle 2 has one **Critical Crash Envelope** (V<sub>2</sub>CCE) that begins at the point where Vehicle 1 is in an imminent path of collision with Vehicle 2 and ends at the point of impact with Vehicle 1.

[Tracking](#) is selected as Vehicle 1’s **Pre-Impact Stability** based on [Precrash General Rule #10](#).

Vehicle 1's **Pre-Impact Location** is [Stayed On Roadway But Left Original Travel Lane](#). This attribute best describes the location of the vehicle after the critical event and before impact.

The non-contact vehicle and the non-contact truck were not involved in an impact in the sequence of crash events and are, therefore, non-contact vehicles and not counted in the structuring of the case.

#### Example 4

##### Example 4 Diagram

Vehicle 1 and Vehicle 2 are traveling in the same direction in adjacent lanes on a divided highway (with a painted median). Vehicle 1 has a tire blow out and loses control, crosses the left lane line, and impacts the right rear of Vehicle 2. Vehicle 2 is redirected across the painted median, skidding and rotating clockwise, and subsequently impacts Vehicle 3. Vehicle 3 attempted to avoid Vehicle 2 by steering right and accelerating. “None” was identified by police on the crash report for all drivers in the data element for recording driver distractions.

| Precrash Element                             | Vehicle 1                                        | Vehicle 2                                                  | Vehicle 3                                     |
|----------------------------------------------|--------------------------------------------------|------------------------------------------------------------|-----------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                                   | Not Distracted                                             | Not Distracted                                |
| <a href="#">Pre-Event Movement</a>           | Going Straight                                   | Going Straight                                             | Going Straight                                |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Loss Control Due To:                | Other Motor Vehicle Encroaching Into Lane                  | Other Motor Vehicle Encroaching Into Lane     |
| <a href="#">Critical Precrash (Event)</a>    | Blow Out or Flat Tire                            | From Adjacent Lane (Same Direction) - Over Right Lane Line | From Opposite Direction - Over Left Lane Line |
| <a href="#">Attempted Avoidance Maneuver</a> | Unknown/Not Reported                             | Unknown/Not Reported                                       | Accelerating and Steering Right               |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                         | Tracking                                                   | Tracking                                      |
| <a href="#">Pre-Impact Location</a>          | Stayed on Roadway, But Left Original Travel Lane | Stayed in Original Travel Lane                             | Stayed in Original Travel Lane                |
| <a href="#">Crash Type</a>                   | 45                                               | 44                                                         | 98                                            |

In this example, Vehicle 1 has one **Critical Crash Envelope** (V<sub>1</sub>CCE) that begins with control loss due to the tire blow out and ends at the point of impact with Vehicle 2. The blow out is the

**Critical Event - Precrash (Event).** Vehicle 2 has two **Critical Crash Envelopes** ( $V_2CCE_1$  and  $V_2CCE_2$ ). Vehicle 2's first **Critical Crash Envelope** ( $V_2CCE_1$ ) begins when Vehicle 1 enters Vehicle 2's travel lane and ends at the point of impact with Vehicle 1. The first CCE is selected because Precrash is only interested in coding the **Critical Crash Envelope** that leads to a vehicle's first harmful event. Vehicle 3 has one **Critical Crash Envelope** ( $V_3CCE$ ) that begins when Driver 3 recognizes and reacts to Vehicle 2 that is in an imminent path of collision with Vehicle 3 and ends at the point of impact with Vehicle 2.

**Attempted Avoidance Maneuver** was coded as [Unknown/Not Reported](#) for Vehicles 1 and 2 because of a lack of information to assess attempted avoidance. The **Crash Type** for Vehicle 1 and Vehicle 2 is ["45" - "44," Sideswipe/Angle: Straight Ahead](#), respectively based on their positions (i.e., left versus right) and because Vehicle 1 did not **intend** to change lanes. Situations involving vehicles that **intended** to change lanes are captured with **Crash Type** codes ["46" and "47," Sideswipe/Angle: Changing lanes](#). The **Crash Type** for Vehicle 3 is ["98," Other](#) since it was not involved in the FIRST HARMFUL EVENT in the crash.

## Example 5

### Example 5 Diagram

Vehicle 2 is stopped waiting to turn left in a left turn lane at an intersection controlled by a traffic signal. Vehicle 1 approaches the intersection and the driver is texting. Vehicle 1's driver looks up at the last minute and brakes and steers right leaving tire marks but cannot avoid striking the rear of Vehicle 2. There is no information on the crash report to assess distraction for the driver of Vehicle 2.

| Precrash Element                             | Vehicle 1                       | Vehicle 2                                     |
|----------------------------------------------|---------------------------------|-----------------------------------------------|
| <a href="#">Driver Distracted By</a>         | While Manipulating Mobile Phone | Not Reported                                  |
| <a href="#">Pre-Event Movement</a>           | Going Straight                  | Stopped in Road                               |
| <a href="#">Critical Precrash (Category)</a> | Other Vehicle in Lane           | Other Vehicle in Lane                         |
| <a href="#">Critical Precrash (Event)</a>    | Other Vehicle Stopped           | Traveling in Same Direction with Higher Speed |

| Precrash Element                             | Vehicle 1                                               | Vehicle 2                      |
|----------------------------------------------|---------------------------------------------------------|--------------------------------|
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Right                              | No Avoidance Maneuver          |
| <a href="#">Pre-Impact Stability</a>         | Skidding Longitudinally - Rotation Less Than 30 Degrees | Tracking                       |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane                          | Stayed in Original Travel Lane |
| <a href="#">Crash Type</a>                   | 20                                                      | 22                             |

In this example, Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins at the point the driver recognizes Vehicle 2 is stopped in the lane and ends at the point of impact with Vehicle 2. Vehicle 2's **Critical Crash Envelope** (V<sub>2</sub>CCE) begins and ends at the point of impact.

Vehicle 1's **Driver Distracted By** is [While Manipulating a Mobile Phone](#). Texting is captured in this attribute.

The Pre-Event Movement and Critical Event coding can be tricky in rear-end crash scenarios. Refer to the [Precrash Event Scenarios for Different Rear-End Collision Situations](#) following the Precrash Examples for additional guidance.

The **Crash Type** for Vehicle 2 is '[22,' Rear-end: Stopped Left](#) because it was stopped and **intended** to turn left at the intersection.

The **Pre-Impact Stability** for Vehicle 1 is [Skidding Longitudinally - Rotation Less Than 30 Degrees](#) as opposed to [Tracking](#) because tire marks were present and rotation was minimal.

## Example 6

### Example 6 Diagram

Vehicle 1 is traveling on a two-lane roadway and the driver, who is diabetic, has a hypoglycemic attack and begins to lose consciousness. The vehicle departs the right side of the road as it enters a curve and strikes a tree.

| Precrash Element                             | Vehicle 1                              |
|----------------------------------------------|----------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                         |
| <a href="#">Pre-Event Movement</a>           | Going Straight                         |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Loss of Control Due To    |
| <a href="#">Critical Precrash (Event)</a>    | Other Cause of Control Loss (Specify:) |

| Precrash Element                             | Vehicle 1        |
|----------------------------------------------|------------------|
| <a href="#">Attempted Avoidance Maneuver</a> | None             |
| <a href="#">Pre-Impact Stability</a>         | Tracking         |
| <a href="#">Pre-Impact Location</a>          | Departed Roadway |
| <a href="#">Crash Type</a>                   | 01               |

Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins at the point where the vehicle is in imminent path of a collision with the tree and ends at impact.

**Driver Distracted By** is coded as [Not Distracted](#) because the driver lost consciousness just prior to the Critical Precrash Event and intoxication, illness, blackouts, falling asleep, or being fatigued are not considered distractions for the purposes of this element in FARS and CRSS.

The **Critical Event** is coded [This Vehicle Control Loss Due To: Other Cause of Control Loss \(Specify:\)](#) following [Precrash General Rule #4](#) that addresses loss of control because of driver illness.

The **Pre-Event Movement** element describes the vehicle's activity just prior to the **Critical Event**, in this case, [Going Straight](#).

The **Crash Type** for Vehicle 1 is "[01, Right Roadside Departure: Drive Off Road](#)." Do not confuse the **Critical Event Category** coding of [This Vehicle Control Loss Due To](#) with the **Crash Type** "[02, Right Roadside Departure: Control/Traction Loss](#)."

## Example 7

### Example 7 Diagram

Vehicle 1 is traveling on a two-lane roadway with moderate snow falling. The driver suddenly encounters black ice on the roadway, loses control, and begins to rotate counterclockwise. The driver attempts to regain control by braking and steering right but overcorrects and the vehicle departs the right side of the roadway and strikes a pole. The police on the crash report identify that the driver is "Not Distracted."

| Precrash Element                             | Vehicle 1                            |
|----------------------------------------------|--------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                       |
| <a href="#">Pre-Event Movement</a>           | Going Straight                       |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Loss of Control Due To: |

| Precrash Element                             | Vehicle 1                                                          |
|----------------------------------------------|--------------------------------------------------------------------|
| <a href="#">Critical Precrash (Event)</a>    | <b><i>Suddenly Encountered</i></b> Poor Road Conditions (Specify:) |
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Right                                         |
| <a href="#">Pre-Impact Stability</a>         | Skidding Laterally Clockwise Rotation                              |
| <a href="#">Pre-Impact Location</a>          | Departed Roadway                                                   |
| <a href="#">Crash Type</a>                   | 02                                                                 |

Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins when the vehicle encounters the black ice and ends at impact with the pole.

The **Critical Event** in this example is [This Vehicle Control Loss Due To: Poor Road Conditions \(Specify: \(Black ice\)\)](#).

It can be difficult to determine the **Critical Event** in cases when weather, road conditions, roadway alignment, and speed all potentially play a role in the crash. Examples 7 and 8 are prime examples, [Poor Road Conditions](#), [Too Fast For Conditions](#), or [This Vehicle Traveling](#) category attributes (e.g., [Off the Edge of the Road on the Right Side](#)) could be selected based on the circumstances.

Typically, [Poor Road Conditions](#) such as ice and puddles are “suddenly” encountered by the driver and not an ongoing situation.

[Too Fast for Conditions](#) applies when the vehicle's movement and speed were not appropriate relative to the vehicle's surroundings; roadway curves are often involved.

If neither of these [Loss of Control Critical Events](#) apply, then [This Vehicle Traveling](#) Category attributes are appropriate.

## Example 8

### Example 8 Diagram

Vehicle 1 is traveling on a two-lane roadway with heavy rain falling. Police estimate the driver was traveling 55 mph in this 35-mph speed zone. While negotiating a curve, the driver loses control on the rain-slickened road and the vehicle slides off the right edge of the road but does not sustain an impact. The driver steers left in an attempt to regain control, crosses both travel lanes, and departs the left side of the road before striking a tree with its right side. The crash

report identifies “None” in a Contributing Circumstances field that includes various driver distraction attributes among the factors available.

| Precrash Element                             | Vehicle 1                                                             |
|----------------------------------------------|-----------------------------------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                                                        |
| <a href="#">Pre-Event Movement</a>           | Negotiating a Curve                                                   |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Loss of Control Due To                                   |
| <a href="#">Critical Precrash (Event)</a>    | Traveling Too Fast for Conditions <i><b>or Road Configuration</b></i> |
| <a href="#">Attempted Avoidance Maneuver</a> | Steering Left                                                         |
| <a href="#">Pre-Impact Stability</a>         | Skidding Laterally Counterclockwise Rotation                          |
| <a href="#">Pre-Impact Location</a>          | Departed Roadway                                                      |
| <a href="#">Crash Type</a>                   | 07                                                                    |

In this example, Vehicle 1 has one **Critical Crash Envelope** (V<sub>1</sub>CCE) that begins when the driver begins to lose control and the vehicle begins to rotate counterclockwise. The envelope ends at impact with the tree. This crash is not a multiple **Critical Crash Envelope** scenario because Vehicle 1 never regained control.

The **Critical Event** is coded [This Vehicle Control Loss Due To: Too Fast For Conditions](#) because the vehicle’s movement and speed were not appropriate relative to the vehicle’s surroundings (heavy rain and curve). This is applicable in this case even without the officer specifically stating, “too fast for conditions.”

The **Pre-Impact Location** is coded [Departed Roadway](#) since the element is based on the location of the vehicle after the critical event, and immediately before the first impact.

The **Crash Type** element is based on the FIRST HARMFUL EVENT and the vehicle did not strike anything when it departed the right side of the road, therefore, [“07,” Left Roadside Departure-Control/Traction Loss](#) is selected as the **Crash Type**.

## Example 9

### Example 9 Diagram

Vehicle 1 is traveling westbound on a highway with a posted speed limit of 55 mph. Vehicle 2 is traveling east on the same highway in sunny and dry conditions. A deer suddenly enters the roadway from the right and the driver of Vehicle 1 attempts to brake and steer left, leaving

several meters of tire marks, but strikes the deer. Vehicle 1 then goes into a counterclockwise yaw and crosses into the oncoming lanes and strikes Vehicle 2.

The driver of Vehicle 1 had a blood alcohol concentration (BAC) of 0.15 and was charged with driving under the influence. There were no indications of distraction identified on the crash report for the driver of Vehicle 1. Instead, in the Contributing Factors field where the officer could assess distraction he selected “animal in road” and “had been drinking.” The Contributing Factors for the driver of Vehicle 2 were coded as “Unknown.” The driver of Vehicle 2 was killed.

| Pre-crash Element                            | Vehicle 1                                             | Vehicle 2                                   |
|----------------------------------------------|-------------------------------------------------------|---------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                                        | Unknown if Distracted                       |
| <a href="#">Pre-Event Movement</a>           | Going Straight                                        | Going Straight                              |
| <a href="#">Critical Precrash (Category)</a> | Object or Animal                                      | Other Motor Vehicle Encroaching Into Lane   |
| <a href="#">Critical Precrash (Event)</a>    | Animal in Road                                        | From Opposite Direction Over Left Lane Line |
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Left                             | Unknown/Not Reported                        |
| <a href="#">Pre-Impact Stability</a>         | Skidding Longitudinally Rotation Less Than 30 Degrees | Tracking                                    |
| <a href="#">Pre-Impact Location</a>          | Stayed On Roadway, But Left Original Travel Lane      | Stayed in Original Travel Lane              |
| <a href="#">Crash Type</a>                   | 13                                                    | 98                                          |

Vehicle 1 has two **Critical Crash Envelopes** ( $V_1CCE_1$  and  $V_1CCE_2$ ). Vehicle 1’s first **Critical Crash Envelope** ( $V_1CCE_1$ ) begins when the driver recognizes the deer in the roadway and ends at the point of impact with the deer. The Precrash coding is based on the **Critical Crash Envelope** that resulted in Vehicle 1’s first impact ( $V_1CCE_1$ ).

Vehicle 2 has only one **Crash Envelope** ( $V_2CCE$ ) that begins when it’s in imminent path of collision with Vehicle 1 and ends at impact.

[Not Distracted](#) is selected for Vehicle 1 **Driver Distracted By**. The driver took evasive maneuvers to avoid the deer that identifies that the driver was attentive prior to the Critical Event. Also, there were no indications of distraction identified on the crash report for the driver of Vehicle 1 and in the Contributing Factors field, where the officer could assess distraction, he selected “animal in road” and “had been drinking.” It’s important to note that the BAC level or indication of alcohol as a factor in the crash for the driver of Vehicle 1 plays no role in distraction coding.

The **Pre-Impact Location** for Vehicle 1 is [Stayed On Roadway- But Left Original Travel Lane](#) since part of the vehicle was out of its original lane prior to impact with the deer. Similarly, vehicles that depart the road and strike a curb are coded as [Departed the roadway](#) even though the majority of the vehicle is still on the roadway.

The **Crash Type** for Vehicle 1 is [“13,” Pedestrian/Animal on Road](#).

Vehicle 2 **Driver Distracted By** is coded [Unknown if Distracted](#); the deceased driver could not be interviewed by the police and the officer coded “Unknown” in the field where distraction would be assessed.

Since no information was available to assess **Attempted Avoidance Maneuver** [Unknown/Not Reported](#) was selected for Vehicle 2.

The **Crash Type** for Vehicle 2 is [‘98,’ Other](#) since it was not involved in the FIRST HARMFUL EVENT in the crash.

### Example 10

#### Example 10 Diagram

The crash occurred at the intersection of a five-lane east/west roadway with a center left-turn lane and a two-lane north/south roadway. The intersection was controlled by traffic signals. Vehicle 1 was eastbound in the left-turn lane of the five-lane roadway. Vehicle 2 was traveling west on the same roadway. Vehicle 1 had a green turn arrow and attempted to turn left to go north on the intersecting two lane road. Vehicle 2 passed through the intersection and its front struck the right side of Vehicle 1. The officer reported that there was no evidence of avoidance actions by either of the vehicles involved.

“Not Distracted” was identified by police on the crash report for the driver of Vehicle 1. The police crash report did not detail the circumstances regarding Vehicle 2’s passing through the intersection, but the driver was cited for running a red light.

| Precrash Element                             | Vehicle 1                                 | Vehicle 2              |
|----------------------------------------------|-------------------------------------------|------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                            | Not Reported           |
| <a href="#">Pre-Event Movement</a>           | Turning Left                              | Going Straight         |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle Encroaching into Lane | This Vehicle Traveling |

| Precrash Element                             | Vehicle 1                                    | Vehicle 2                                |
|----------------------------------------------|----------------------------------------------|------------------------------------------|
| <a href="#">Critical Precrash (Event)</a>    | From Opposite Direction Over Right Lane Line | Crossing Over (Passing Through) Junction |
| <a href="#">Attempted Avoidance Maneuver</a> | No Avoidance Maneuver                        | No Avoidance Maneuver                    |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                     | Tracking                                 |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane               | Stayed in Original Travel Lane           |
| <a href="#">Crash Type</a>                   | 68                                           | 69                                       |

In this example, the **Critical Crash Envelope** for both vehicles (V<sub>1</sub>CCE) and (V<sub>2</sub>CCE) begin when they are in an imminent path of collision. The **Critical Crash Envelopes** end at the point of impact.

The first portion of [Precrash General Rule #7](#) applies to this crash. It states “When two vehicles are initially traveling on the **same** trafficway and one executes a left turn with the right-of-way (i.e., green arrow), use [Other Motor Vehicle Encroaching Into Lane - From Opposite Direction Over Right Lane Line](#) for the turning vehicle’s **Critical Event**.”

A similar principle applies for Vehicle 1’s **Pre-Impact Location**; it’s considered to have [Stayed in Original Travel Lane](#) while making the turn. Consider Vehicle 1’s “lane” as continuing left as they negotiate the turn through the intersection.

Vehicle 2’s **Driver Distracted By** is coded [Not Reported](#) since the police crash report did not provide any information on distractions.

## Example 11

### Example 11 Diagram

The crash occurred at the intersection of a five-lane east/west roadway with a center left-turn lane and a two-lane north/south roadway. The intersection was controlled by traffic signals.

Vehicle 1 was southbound on the two-lane roadway. Vehicle 2 was traveling west on the five-lane roadway. Vehicle 1 had a green turn arrow and attempted to turn left to travel east on the intersecting five lane road. Vehicle 2 passed through the intersection and its front struck the left side of Vehicle 1.

The driver of Vehicle 1 was attentive and took no avoidance actions. Vehicle 2's driver reported that he was thinking about an issue at work and did not notice the traffic signal until the last moment. He applied his brakes, but no tire marks were present.

| <b>Precrash Element</b>                             | <b>Vehicle 1</b>                          | <b>Vehicle 2</b>                         |
|-----------------------------------------------------|-------------------------------------------|------------------------------------------|
| <a href="#"><u>Driver Distracted By</u></a>         | Not Distracted                            | Lost in Thought/Day Dreaming             |
| <a href="#"><u>Pre-Event Movement</u></a>           | Turning Left                              | Going Straight                           |
| <a href="#"><u>Critical Precrash (Category)</u></a> | Other Motor Vehicle Encroaching Into Lane | This Vehicle Traveling                   |
| <a href="#"><u>Critical Precrash (Event)</u></a>    | From Crossing Street Across Path          | Crossing Over (Passing Through) Junction |
| <a href="#"><u>Attempted Avoidance Maneuver</u></a> | No Avoidance Maneuver                     | Braking                                  |
| <a href="#"><u>Pre-Impact Stability</u></a>         | Tracking                                  | Tracking                                 |
| <a href="#"><u>Pre-Impact Location</u></a>          | Stayed in Original Travel Lane            | Stayed in Original Travel Lane           |
| <a href="#"><u>Crash Type</u></a>                   | 82                                        | 83                                       |

In this example, Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins at the point where Vehicle 1 is in an imminent collision path with Vehicle 2 and ends at the point of impact.

Vehicle 2's **Critical Crash Envelope** (V<sub>2</sub>CCE) begins when the driver recognizes Vehicle 1 turning in front of it in the intersection and ends at impact.

The second portion of [Precrash General Rule #7](#) applies to this crash. It states "When two vehicles are initially traveling on **different** trafficways the **Critical Event** for the vehicle turning left with the right-of-way should be [Other Motor Vehicle Encroaching into Lane-From Crossing Street, Across Path](#)."

Vehicles initially on **different** trafficways are captured in **Crash Type Configuration "K," Turn Into Path** (**Crash Types "76" - "85"**). So, in this case, the **Crash Types** for Vehicle 1 and Vehicle 2 are ["82" and "83"](#) respectively. Turning vehicles initially on the **same** trafficway are coded in **Crash Type Configuration "J," Turn Across Path** (**Crash Types "68" - "75"**). Unlike many of the other **Crash Types**, the plane contacted on the vehicle is irrelevant for the [Change Trafficway \(Category IV\) Crash Types](#).

## Example 12

### Example 12 Diagram

Vehicle 1 was eastbound on a two-lane roadway. Vehicle 2 was backing out of a driveway on the south side of the road, intending to travel east. Vehicle 1 braked and steered left but was unable to avoid striking the rear of Vehicle 2. The driver of Vehicle 2 stated he saw the other vehicle approaching but misjudged its speed and did not think they were going to collide.

The officer indicated that Vehicle 1 was traveling 50 mph in the 35-mph speed zone and applied the brakes just prior to impact but did not leave tire marks. Driver distractions were identified by police for both drivers on the crash report as “None.”

| Precrash Element                             | Vehicle 1                                  | Vehicle 2              |
|----------------------------------------------|--------------------------------------------|------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                             | Not Distracted         |
| <a href="#">Pre-Event Movement</a>           | Going Straight                             | Backing Up             |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle Encroaching Into Lane  | This Vehicle Traveling |
| <a href="#">Critical Precrash (Event)</a>    | From Driveway, Turning into Same Direction | Backing                |
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Left                  | No Avoidance Maneuver  |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                   | Tracking               |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane             | Entered Roadway        |
| <a href="#">Crash Type</a>                   | 93                                         | 92                     |

In this example, Vehicle 1’s **Critical Crash Envelope** ( $V_1CCE$ ) begins at the point where the driver recognizes Vehicle 2 is backing into the roadway and recognizes the danger. The **Critical Crash Envelope** for Vehicle 1 ends at impact.

Vehicle 2’s **Critical Crash Envelope** ( $V_2CCE$ ) begins when it’s in imminent path of collision with Vehicle 1 and ends at impact.

Although Vehicle 1 was traveling 15 mph over the speed limit, the **Critical Precrash Category** for Vehicle 1 is [Other Motor Vehicle Encroaching Into Lane](#). The situation that made the event critical was Vehicle 2’s movement (backing out of the driveway) and not Vehicle 1’s speed. The

**Critical Event** for Vehicle 1 is [From Driveway Turning Into Same Direction](#), since Vehicle 2 **intended** to travel east in the same direction as Vehicle 1.

The **Critical Event** for Vehicle 2 is [This Vehicle Traveling- Backing](#).

### Example 13

#### Example 13 Diagram

Vehicle 1 was eastbound on a five-lane roadway with center left-turn lanes approaching an intersection controlled by a traffic signal. Vehicle 2 was westbound on the same roadway in the left turn lane. The signal was solid green for eastbound and westbound traffic. Vehicle 2 attempted to make a U-turn at the intersection to travel east and was struck in the right side by the front of Vehicle 1. The driver of Vehicle 2 stated he scanned the intersection for traffic but did not see Vehicle 1 approaching. The driver of Vehicle 1 was attentive and saw the other vehicle approaching but did not think it would attempt to turn and consequently had no time to react. Police charged the driver of Vehicle 2 with failure to yield.

| Precrash Element                             | Vehicle 1                                   | Vehicle 2                                       |
|----------------------------------------------|---------------------------------------------|-------------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                              | Not Distracted                                  |
| <a href="#">Pre-Event Movement</a>           | Going Straight                              | Making a U-Turn                                 |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle Encroaching into Lane   | This Vehicle Traveling                          |
| <a href="#">Critical Precrash (Event)</a>    | From Opposite Direction Over Left Lane Line | Making a U-Turn                                 |
| <a href="#">Attempted Avoidance Maneuver</a> | No Avoidance Maneuver                       | No Avoidance Maneuver                           |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                    | Tracking                                        |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane              | Stayed on Roadway but Left Original Travel Lane |
| <a href="#">Crash Type</a>                   | 98                                          | 98                                              |

In this example, Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins at the point where the driver recognizes Vehicle 2 is making a U-turn in front of them and ends at impact.

Vehicle 2's **Critical Crash Envelope** (V<sub>2</sub>CCE) begins when it's in imminent path of collision with Vehicle 1 and ends at impact.

The **Critical Event** for Vehicle 1 is [Other Motor Vehicle Encroaching into Lane-From Opposite Direction Over Left Lane Line](#).

The **Pre-Event Movement** for Vehicle 2 is [Making a U-Turn](#) and the **Critical Event** for Vehicle 2 is [Making a U-Turn](#). If it is unclear if a vehicle is [Turning Left](#) or [Making a U-Turn](#), default to [Turning Left](#).

The key to the **Critical Event** coding in this case is that Vehicle 2 did **not** have the right of way while making the U-turn. If the scenario was altered such that Vehicle 2 was making a legal U-turn **with** the right of way, the first portion of [Precrash General Rule #7](#) would apply and Vehicle 2's **Critical Event** would be [Other Motor Vehicle Encroaching into Lane -From Opposite Direction Over Right Lane Line](#).

The **Crash Type** for both vehicles is, ["98," Other Crash Type](#). This **Crash Type** is used for collisions that do not reasonably fit into any of the specified types. This code includes (but is not limited to): Rollovers on the road, U-turns, third or subsequent vehicles involved in a crash, or the second involved vehicle when the FIRST HARMFUL EVENT involved a vehicle-to-object collision or non-collision.

#### Example 14

##### Example 14 Diagram

Vehicle 1 was traveling westbound on a median divided highway. Vehicle 2 was traveling east on the same highway. The driver of Vehicle 1 reportedly fell asleep and drifted off the left side of the roadway. Vehicle 1 crossed the median and entered the eastbound lanes where its front struck the left side of Vehicle 2. After initial impact Vehicle 2 rotated counterclockwise and rolled over one quarter turn, coming to rest on its right side. The field on the crash report for assessing driver distraction was coded as "Other" for the driver of Vehicle 1 and "None" for the driver of Vehicle 2.

| Preocrash Element                            | Vehicle 1                                    | Vehicle 2                                   |
|----------------------------------------------|----------------------------------------------|---------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                               | Not Distracted                              |
| <a href="#">Pre-Event Movement</a>           | Going Straight                               | Going Straight                              |
| <a href="#">Critical Precrash (Category)</a> | This Vehicle Traveling                       | Other Motor Vehicle Encroaching Into Lane   |
| <a href="#">Critical Precrash (Event)</a>    | Off the Edge of the Road on the Left Side    | From Opposite Direction Over Left Lane Line |
| <a href="#">Attempted Avoidance Maneuver</a> | No Avoidance Maneuver                        | Unknown/Not Reported                        |
| <a href="#">Pre-Impact Stability</a>         | Skidding Laterally Counterclockwise Rotation | Tracking                                    |
| <a href="#">Pre-Impact Location</a>          | Departed Roadway                             | Stayed in Original Travel Lane              |
| <a href="#">Crash Type</a>                   | 64                                           | 65                                          |

In this example, Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins at the point where the vehicle leaves the initial roadway and ends at impact.

Vehicle 2's **Critical Crash Envelope** (V<sub>2</sub>CCE) begins when the driver recognizes the other vehicle approaching and ends at impact.

Vehicle 1's **Driver Distracted By** is coded as [Not Distracted](#) because the driver was asleep just prior to the Critical Precrash Event and intoxication, illness, blackouts, falling asleep, or being fatigued are not considered distractions for the purposes of this element in FARS and CRSS.

Vehicle 1's **Attempted Avoidance Maneuver** is coded as [No Avoidance Maneuver](#) because this element identifies the driver's action/response to the Critical Event and this driver was asleep.

[Tracking](#) is the appropriate selection for Vehicle 2's **Pre-Impact Stability**. [Precrash General Rule #10](#) states that a vehicle is considered to be "Tracking" if the following conditions are met:

- No skid marks are present on the diagram or mentioned in the narrative,
- The case material does not indicate skidding, and
- The vehicle did not rotate 30 degrees or more.

The **Pre-Impact Stability** for Vehicle 1 is [Skidding laterally-counterclockwise rotation](#) since the vehicle rotated 30 degrees or more. The driver need not make any steering inputs or leave tire marks for this attribute to be selected.

Median scenarios sometime cause confusion with the **Pre-Impact Location** element. [Departed Roadway](#) is used for vehicles crossing a median into oncoming traffic, as Vehicle 1 does in this case. A vehicle is considered to have [Returned to Roadway](#) only if it returned to the **same** roadway it was initially traveling on after the **Critical Event**.

The **Crash Type** for Vehicle 1 and Vehicle 2 is ["64" and "65," Angle/Sideswipe](#) respectively since it involved the side plane of one or both of the vehicles. If the collision had involved the front plane of both vehicles, then the **Crash Type** would have been ["50" and "51," Head-On](#).

## Example 15

### Example 15 Diagram

Vehicle 1 was traveling west on a two-lane roadway with a private driveway on the south side of the road. Vehicle 2 was westbound ahead of Vehicle 1 and was decelerating so it could turn left into the private drive. Vehicle 3 was stopped facing north on the driveway access of the private drive. The driver of Vehicle 1 was reportedly daydreaming and did not see Vehicle 2 decelerating in the lane ahead. After realizing Vehicle 2 was in its lane, the driver of Vehicle 1 braked and steered right off the right side of the road (leaving tire marks) and then steered left back into the travel lanes. The front of Vehicle 1 struck the rear of Vehicle 2 before the driver of Vehicle 2 could react. The initial impact pushed Vehicle 2 forward into Vehicle 3. The crash report identified “Not Distracted” for Vehicle 2 and Vehicle 3.

| Precrash Element                             | Vehicle 1                                                | Vehicle 2                      | Vehicle 3                                            |
|----------------------------------------------|----------------------------------------------------------|--------------------------------|------------------------------------------------------|
| <a href="#">Driver Distracted By</a>         | Lost in Thought/Day Dreaming                             | Not Distracted                 | Not Distracted                                       |
| <a href="#">Pre-Event Movement</a>           | Going Straight                                           | Going Straight                 | Stopped in Roadway                                   |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle in Lane                              | This Vehicle Traveling         | Other Motor Vehicle Encroaching into Lane            |
| <a href="#">Critical Precrash (Event)</a>    | Traveling in Same Direction While Decelerating           | This Vehicle Decelerating      | From Crossing Street-Turning into Opposite Direction |
| <a href="#">Attempted Avoidance Maneuver</a> | Braking and Steering Right                               | No Avoidance Maneuver          | No Avoidance Maneuver                                |
| <a href="#">Pre-Impact Stability</a>         | Skidding Longitudinally<br>Rotation Less Than 30 Degrees | Tracking                       | Tracking                                             |
| <a href="#">Pre-Impact Location</a>          | Returned to Roadway                                      | Stayed in Original Travel Lane | Stayed in Original Travel Lane                       |
| <a href="#">Crash Type</a>                   | 28                                                       | 30                             | 98                                                   |

In this example, Vehicle 1’s **Critical Crash Envelope** (V<sub>1</sub>CCE) begins when the driver recognizes Vehicle 2 is decelerating ahead and ends with impact with Vehicle 2.

Vehicle 2 has two **Critical Crash Envelopes** ( $V_2CCE_1$  and  $V_2CCE_2$ ). Vehicle 2's first **Critical Crash Envelope** ( $V_2CCE_1$ ) begins when it is in imminent path of a collision with Vehicle 1 and ends at the point of impact with Vehicle 1. Use the **Critical Crash Envelope** that resulted in Vehicle 2's first impact ( $V_2CCE_1$ ), because Precrash coding is associated with the **Critical Crash Envelope** that leads to a vehicle's first harmful event.

The **Critical Event** for Vehicle 1 is [Other Motor Vehicle in Lane-Traveling in Same Direction While Decelerating](#), even though the vehicle departed the right side of the roadway prior to striking Vehicle 2. Determining the **Critical Event** can be made easier by using the “**But For**” test. In this example “But For” Vehicle 2 being in this vehicle's lane, it would not have been involved in the crash.

Vehicle 1's **Attempted Avoidance Maneuver** is *Braking and Steering Right*, because that was the driver's initial action in response to the realization of impending danger. Vehicle 1 steering left back into the roadway is not considered in this case. Vehicle 3's **Attempted Avoidance Maneuver** is [No Avoidance Maneuver](#) because the vehicle was stopped.

The **Pre-Impact Location** for Vehicle 1 is [Returned to Roadway](#), since the vehicle returned to the **same** roadway during the Precrash motion.

The **Crash Type** for Vehicle 1 and Vehicle 2 is “28” [Rear-End: Decelerating \(Slowing\)](#) – “30,” [Rear-End: Decelerating, Going Left](#) respectively based on three factors:

- The front to rear impact configuration,
- Vehicle 2's decelerating (as opposed to stopped or lower steady speed), and
- Vehicle 2's **intent** to turn left into the private drive.

## Example 16

### Example 16 Diagram

Vehicle 1 was traveling east in the right lane of a straight and level divided highway with shoulders. Vehicle 2 was eastbound in the right lane behind Vehicle 1. Conditions were daylight with rain falling and fog. All indications are that both vehicles were driving at or near the speed limit. Vehicle 1 edged off the right side of the roadway onto the shoulder and the driver overcorrected, braking and steering left, back into its original lane. The vehicle went into a counterclockwise yaw and was struck on the left side by the front of Vehicle 2.

Police indicated the driver of Vehicle 1 was “Distracted” and that the driver of Vehicle 2 was “Not Distracted.”

| Pre-crash Element                             | Vehicle 1                                       | Vehicle 2                                      |
|-----------------------------------------------|-------------------------------------------------|------------------------------------------------|
| <a href="#">Driver Distracted By</a>          | Distraction (Distracted), Details Unknown       | Not Distracted                                 |
| <a href="#">Pre-Event Movement</a>            | Going Straight                                  | Going Straight                                 |
| <a href="#">Critical Pre-crash (Category)</a> | This Vehicle Traveling                          | Other Motor Vehicle in Lane                    |
| <a href="#">Critical Pre-crash (Event)</a>    | Over the Lane Line on Right Side of Travel Lane | Traveling in Same Direction While Decelerating |
| <a href="#">Attempted Avoidance Maneuver</a>  | Braking and Steering Left                       | Unknown/Not Reported                           |
| <a href="#">Pre-Impact Stability</a>          | Skidding Laterally-Counter-Clockwise Rotation   | Tracking                                       |
| <a href="#">Pre-Impact Location</a>           | Returned to Roadway                             | Stayed in Original Travel Lane                 |
| <a href="#">Crash Type</a>                    | 48                                              | 48                                             |

Vehicle 1's **Critical Crash Envelope** (V<sub>1</sub>CCE) begins when the driver realizes the vehicle is departing the travel lane and ends at impact.

The **Critical Crash Envelope** for Vehicle 2 (V<sub>2</sub>CCE) begins when the vehicle is in imminent path of collision with Vehicle 1 and ends at impact.

[Distraction \(Distracted\), Details Unknown](#) is selected for Vehicle 1 **Driver Distracted By**. Police reported the driver was distracted, although the specific distraction was not identified.

The presence of rain and fog does not affect Vehicle 1's **Critical Event** of [This Vehicle Traveling-Off The Edge of the Road On the Right Side](#) in this case. Do not assume that [This Vehicle Loss of Control Critical Events](#) such as [Poor Road Conditions](#) or [Traveling Too Fast for Conditions](#) are always selected just because the weather and/or road conditions were not optimal.

When determining **Crash Type**, it is important to keep in mind that some **Crash Configurations** are plane of impact dependent, while others are not. In this case the **Crash Type** for both vehicles are ["48," Sideswipe/Angle: Specifics Other](#). The vehicles were traveling in the same trafficway in the same direction ([Crash Type Category II](#)) and the impact involved the side of one or both of the vehicles ([Crash Type Configuration F](#)). If the impact had been front to rear, [Crash Configuration D \(Rear-End\)](#) would have applied.

## Example 17

### Example 17 Diagram

Vehicle 1 is traveling eastbound. A non-contact vehicle (NCV) is westbound and attempts to turn left in front of Vehicle 1 into an intersecting private driveway. Vehicle 1 braked and steered left to avoid the non-contact vehicle. The driver of Vehicle 1 successfully avoided the non-contact vehicle and maintained full control but crossed into the westbound lane. Now traveling the wrong way in the westbound lane, Vehicle 1 recognized that Vehicle 2 was in his path and attempted to steer right and return to the eastbound lane but struck Vehicle 2 head on. Vehicle 2 attempted to avoid the crash by braking and steering right. The crash report was coded as “Not Distracted” for both drivers.

| Precrash Element                             | Vehicle 1                                                  | Vehicle 2                       |
|----------------------------------------------|------------------------------------------------------------|---------------------------------|
| <a href="#">Driver Distracted By</a>         | Not Distracted                                             | Not Distracted                  |
| <a href="#">Pre-Event Movement</a>           | Successful Avoidance Maneuver to a Previous Critical Event | Going Straight                  |
| <a href="#">Critical Precrash (Category)</a> | Other Motor Vehicle in Lane                                | Other Motor Vehicle in Lane     |
| <a href="#">Critical Precrash (Event)</a>    | Traveling in Opposite Direction                            | Traveling in Opposite Direction |
| <a href="#">Attempted Avoidance Maneuver</a> | Steering Right                                             | Braking and Steering Right      |
| <a href="#">Pre-Impact Stability</a>         | Tracking                                                   | Tracking                        |
| <a href="#">Pre-Impact Location</a>          | Stayed in Original Travel Lane                             | Stayed in Original Travel Lane  |
| <a href="#">Crash Type</a>                   | 52                                                         | 52                              |

In this example, Vehicle 1 has two **Critical Crash Envelopes** ( $V_1CCE_1$  and  $V_1CCE_2$ ). Vehicle 1’s first **Critical Crash Envelope** ( $V_1CCE_1$ ) ends at the point where the driver of Vehicle 1 made a successful avoidance maneuver and maintained full control of the vehicle. Vehicle 1’s second **Critical Crash Envelope** ( $V_1CCE_2$ ) begins shortly after the successful avoidance maneuver and ends at the point of impact with Vehicle 2. For coding purposes, use the **Critical Crash Envelope** that resulted in Vehicle 1’s first impact ( $V_1CCE_2$ ).

Vehicle 2 has one **Critical Crash Envelope** ( $V_2CCE_1$ ), which begins at the point where the driver of Vehicle 2 recognizes Vehicle 1 in their lane and ends at the point of impact with Vehicle 1.

The **Crash Type** for both vehicles is coded “52,” [Head-On: Specifics Other](#) because Vehicle 1 had full control traveling the wrong way.

#### **Example 18: Precrash Event Scenarios for Different Rear-End Collision Situations**

Rear-end crashes sometimes cause confusion with precrash coding. Two key points must be determined to accurately code the [Pre-Event Movement](#), [Critical Event - Precrash \(Category\)](#) and [Critical Event - Precrash \(Event\)](#):

- Was the lead vehicle stopped, decelerating, or traveling at a steady speed?
- Did the trailing vehicle decelerate prior to impact?

The following scenarios should be used as a guide.

#### ***Two Vehicle Collisions***

**Scenario 1:** Both vehicles in motion. Leading vehicle, traveling at steady speed, is struck from behind by trailing vehicle.

| <b>Vehicle Position</b> | <b>Pre-Event Movement</b> | <b>Critical Precrash (Category)</b> | <b>Critical Precrash (Event)</b>                    |
|-------------------------|---------------------------|-------------------------------------|-----------------------------------------------------|
| Trailing                | Going Straight            | Other Motor Vehicle in Lane         | Traveling in Same Direction with Lower Steady Speed |
| Lead                    | Going Straight            | Other Motor Vehicle in Lane         | Traveling in Same Direction with Higher Speed       |

**Scenario 2:** Both vehicles traveling at same speed. Lead vehicle decelerates and trailing vehicle continues at initial speed. Trailing vehicle eventually applies brakes before striking the lead vehicle that is not yet stopped.

| <b>Vehicle Position</b> | <b>Pre-Event Movement</b> | <b>Critical Precrash (Category)</b> | <b>Critical Precrash (Event)</b>               |
|-------------------------|---------------------------|-------------------------------------|------------------------------------------------|
| Trailing                | Going Straight            | Other Motor Vehicle in Lane         | Traveling in Same Direction While Decelerating |
| Lead                    | Going Straight            | This Vehicle Traveling              | This Vehicle Decelerating                      |

**Scenario 3:** Both vehicles traveling at same speed. Lead vehicle stops and is immediately struck by trailing vehicle.

| Vehicle Position | Pre-Event Movement | Critical Precrash (Category) | Critical Precrash (Event)                      |
|------------------|--------------------|------------------------------|------------------------------------------------|
| Trailing         | Going Straight     | Other Motor Vehicle in Lane  | Traveling in Same Direction While Decelerating |
| Lead             | Going Straight     | Other Motor Vehicle in Lane  | Traveling in Same Direction with Higher Speed  |

**Scenario 4:** Lead vehicle is stopped on roadway and is struck by a trailing vehicle.

| Vehicle Position | Pre-Event Movement | Critical Precrash (Category) | Critical Precrash (Event)                     |
|------------------|--------------------|------------------------------|-----------------------------------------------|
| Trailing         | Going Straight     | Other Motor Vehicle in Lane  | Other Vehicle Stopped                         |
| Lead             | Stopped in Road    | Other Motor Vehicle in Lane  | Traveling in Same Direction with Higher Speed |

**Scenario 5:** Lead and trailing vehicle stopped on roadway. Lead vehicle backs into trailing vehicle.

| Vehicle Position | Pre-Event Movement | Critical Precrash (Category) | Critical Precrash (Event) |
|------------------|--------------------|------------------------------|---------------------------|
| Trailing         | Stopped in Road    | Other Motor Vehicle in Lane  | Backing                   |
| Lead             | Stopped in Road    | This Vehicle Traveling       | Backing                   |

### ***Three Vehicle Collisions***

**Scenario 6:** Two vehicles stopped in traffic, struck by decelerating trailing vehicle.

| Vehicle Position | Pre-Event Movement | Critical Precrash (Category) | Critical Precrash (Event)                      |
|------------------|--------------------|------------------------------|------------------------------------------------|
| Trailing         | Decelerating       | Other Motor Vehicle in Lane  | Other Vehicle Stopped                          |
| Middle           | Stopped in Road    | Other Motor Vehicle in Lane  | Traveling in Same Direction while Decelerating |
| Lead             | Stopped in Road    | Other Motor Vehicle in Lane  | Traveling in Same Direction with Higher Speed  |

**Scenario 7:** Lead vehicle stopped in traffic, middle vehicle decelerating, trailing vehicle strikes middle vehicle that strikes lead vehicle.

| <b>Vehicle Position</b> | <b>Pre-Event Movement</b> | <b>Critical Precrash (Category)</b> | <b>Critical Precrash (Event)</b>               |
|-------------------------|---------------------------|-------------------------------------|------------------------------------------------|
| Trailing                | Going Straight            | Other Motor Vehicle in Lane         | Traveling in Same Direction while Decelerating |
| Middle                  | Decelerating              | Other Motor Vehicle in Lane         | Traveling in Same Direction with Higher Speed  |
| Lead                    | Stopped in Road           | Other Motor Vehicle in Lane         | Traveling in Same Direction with Higher Speed  |

### PC3 - Vehicle Number - Precrash Level

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.VEH\_NO

#### ELEMENT VALUES:

| Codes   | Attributes      |
|---------|-----------------|
| 001-999 | Assigned Number |

**Definition:** This element identifies the number assigned to this vehicle in the crash.

**Remarks:** Each motor vehicle in a crash must be assigned a unique number by the Analyst. Order is not important.

Numbers assigned to vehicles must be consecutive, starting with “001” with no missing numbers.

## PC4 - Contributing Circumstances, Motor Vehicle

**FORMAT:** 2 numeric. Select All That Apply.

**SAS NAME:** *Factor.VEHICLECC*

**ELEMENT VALUES:**

| Codes | Attributes                                                 |
|-------|------------------------------------------------------------|
| 00    | <a href="#">None <i>Noted</i></a>                          |
| 01    | <a href="#">Tires</a>                                      |
| 02    | <a href="#">Brake System</a>                               |
| 03    | <a href="#">Steering</a>                                   |
| 04    | <a href="#">Suspension</a>                                 |
| 05    | <a href="#">Power Train</a>                                |
| 06    | <a href="#">Exhaust System</a>                             |
| 07    | Head Lights                                                |
| 08    | Signal Lights                                              |
| 09    | <a href="#">Other Lights</a>                               |
| 10    | Wipers                                                     |
| 11    | <a href="#">Wheels</a>                                     |
| 12    | Mirrors                                                    |
| 13    | <a href="#">Windows/Windshield</a>                         |
| 14    | <a href="#">Body/Doors</a>                                 |
| 15    | <a href="#">Truck Coupling/Trailer Hitch/Safety Chains</a> |
| 16    | <a href="#">Safety Systems</a>                             |
| 17    | <a href="#">Vehicle Contributing Factors - No Details</a>  |
| 97    | <a href="#">Other</a>                                      |
| 99    | <a href="#">Reported as Unknown</a>                        |

**Definition:** This element describes the possible pre-existing motor vehicle defects or maintenance conditions that may have contributed to the crash.

**Remarks:** Rationale: Important for determining the significance of pre-existing problems, including equipment and operation, in motor vehicles involved in crashes that could be useful in determining the need for improvements in manufacturing and consumer alerts.

**00 (None Noted)** is used:

- when the case material make a positive statement that the vehicle had no defects, or “none” was indicated on the police crash report.
- when the case material does not indicate a defect in an available field and not reporting a defect in that field indicates “None.”
- when the investigating officer is limited in selection and cannot select a defect in addition to another factor relevant to crash and no other indication of a defect exists in the case material.
- ***When the case material are silent on this information and there is no reason to suspect a pre-existing motor vehicle defect or maintenance condition exists that may have contributed to the crash.***

**01 (Tires)** include any defect (e.g., lost/losing re-tread) or maintenance issue of a tire (e.g., one or more bald tires). If the contributing factor is of the wheel (e.g., a lug nut comes off), then use [\*\*11 \(Wheels\)\*\*](#). If the officer noted this driver was driving with a “donut”/spare tire, improperly sized tire(s), driving on run-flats in an air-out situation, etc., see RELATED FACTORS-DRIVER LEVEL [\*\*057 \(Driving with Tire Related Problems\)\*\*](#) *and the table for comparison example coding situations.*

**02 (Brake System)** includes parking brakes.

**03 (Steering)** is used when the case material indicate the following may have contributed to the crash: tie rod ends, kingpins, power steering components, and ball joints.

**04 (Suspension)** is used when the case material indicate that the vehicle’s suspension components may have contributed to the crash. These include, springs, shock absorbers, struts, and control arms.

**05 (Power Train)** is used when the case material indicate that the vehicle’s power train components may have contributed to the crash. Examples are universal joints, drive shaft, and transmission. This also includes engine, differential, and stuck throttles.

**06 (Exhaust System)** includes exhaust manifold(s), headers, muffler, catalytic converter, tailpipe, etc.

**09 (Other Lights)** is used for an indication of missing or inoperative taillights on the vehicle or trailer contributing to the crash. It is also used when the case material indicated the “lights” of the vehicle contributed to the crash, but the type of light is not specified.

**11 (Wheels)** includes loss of lug nuts.

**13 (Windows/Windshield)** is used when there is a pre-existing defect to the windows or windshield such as improper tinting or cracks.

**14 (Body/Doors)** includes trunk, hood, tailgate, rear doors of cargo vans, etc.

**15 (Truck Coupling/Trailer Hitch/Safety Chains)** applies to a defective trailer hitch or an improper trailer hitch.

**16 (Safety Systems)** is used when the case material indicate that the air bags failed to deploy, or the air bag deployed inappropriately. Also, use this when a seat belt failure is described, such as webbing that was excessively worn or came unlatched. Excludes: improper use.

**17 (Vehicle Contributing Factors - No Details)** is used if a vehicle “factor” or “defect” is indicated in the case material but no information is given concerning the nature of the “factor.”

**97 (Other)** includes any other component described in the case material that is not listed in the above attribute list, such as horns.

**99 (Reported as Unknown)** is used only if the case material specifically indicates an “unknown defect” or “unknown contributing factor.”

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                      | <b>THEN</b>                                                                       |
|-----------------|----------------------------------------------------------------|-----------------------------------------------------------------------------------|
| 1L4P            | any DRIVER’S VISION OBSCURED BY equals 09,                     | at least one CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE must equal 97.             |
| 1L5P            | any DRIVER’S VISION OBSCURED BY equals 10,                     | at least one CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE must equal 07 or 08 or 09. |
| 3D70            | CRITICAL EVENT - PRECRASH (EVENT) equals 01-04,                | CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE must not equal 00.                      |
| 3DB0            | any CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE equals 00 or 99, | only that one code and no other must be coded for this vehicle.                   |
| V990            | any SEQUENCE OF EVENTS equals 61,                              | CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE should not equal 00.                    |

## PC5 - Trafficway Description

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.VTRAFWAY

**ELEMENT VALUES:**

| Codes | Attributes                                                            |
|-------|-----------------------------------------------------------------------|
| 0     | <a href="#">Non-Trafficway or Driveway Access</a>                     |
| 1     | <a href="#">Two-Way, Not Divided</a>                                  |
| 2     | <a href="#">Two-Way, Divided, Unprotected Median</a>                  |
| 3     | <a href="#">Two-Way, Divided, Positive Median Barrier</a>             |
| 5     | <a href="#">Two-Way, Not Divided with a Continuous Left-Turn Lane</a> |
| 4     | <a href="#">One-Way Trafficway</a>                                    |
| 6     | <a href="#">Entrance/Exit Ramp</a>                                    |
| 8     | <a href="#">Not Reported</a>                                          |
| 9     | <a href="#">Reported as Unknown</a>                                   |

**Definition:** This element identifies the value indicated in the case material that best describes the trafficway flow just prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** Enter the value indicated in the case material that best describes the trafficway flow just prior to this vehicle's [CRITICAL PRECRASH EVENT](#). For vehicles departing the trafficway prior to their CRITICAL PRECRASH EVENT, the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, the trafficway selected for classification is the one it is on before entering the junction.

**See the [Coding Guide: Trafficway Components](#) for helpful information.**

A trafficway may include several roadways if it is a physically divided highway. Trafficways are not physically divided unless the divider is a median, barrier, or other constructed device.

**Pavement markings do qualify when they meet the definition of a median.** Refer to the definition of [03 \(On Median\)](#) under RELATION TO TRAFFICWAY.

A channelized lane should be considered a turn lane of the roadway it is part of, not a separate one-way roadway. Therefore, crashes occurring in a channelized lane should not be coded as on a separate trafficway but should reflect the trafficway the vehicle was on before entering the channel.

**0 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#) or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

**1 (Two-Way, Not Divided)** is used whenever there is no median. Generally, medians are not designed to legally carry traffic. Any painted markings on the roadway less than four feet wide

are not medians. **NOTE:** Although gores separate roadways, and traffic islands (associated with channels) separate travel lanes, neither is involved in the determination of trafficway division.

**5 (Two-Way, Not Divided, with a Continuous Left-Turn Lane)** is used whenever the trafficway has a two-way left turn lane positioned between opposing straight-through travel lanes. It is designed to allow left turns to driveways, shopping centers, businesses, etc., while at the same time providing a separation of opposing straight-through travel lanes.

**2 (Two-Way, Divided, Unprotected Median)** is used whenever the trafficway is physically divided; however, the division is unprotected (e.g., vegetation, gravel, paved medians, trees, water, embankments, painted medians greater than 4 feet, and ravines that separate a trafficway (i.e., all non-manufactured barriers)). **NOTE:** Curbs alone are not traffic barriers; therefore, raised curbed medians **DO NOT** constitute a positive barrier in and by themselves. Without a positive barrier, curbed medians are examples of **2 (Two-Way, Divided, Unprotected Medians)**. The unprotected medians can be of any width; however, painted, paved, flush areas must be at least 4 feet in width to constitute a median strip. **Continuous Left-turn Lanes are not considered Unprotected Medians** (see [5 \(Two-Way, Not Divided, with a Continuous Left-Turn Lane\)](#)).

**3 (Two-Way, Divided, Positive Median Barrier)** is used whenever the traffic is physically divided and the division is protected by any concrete, metal, or other type of longitudinal barrier (i.e., all manufactured barriers). For underpass support structures and bridge rails acting as a barrier, use this attribute.

Traffic Barrier refers to a physical structure such as a guardrail, a concrete safety barrier, or a rock wall that has the primary function of preventing cross-median travel by deflecting and redirecting vehicles along the roadway on which they were traveling. Therefore, trees, curbing, rumble strips, and drain depressions are not barriers.

All traffic barriers are constructed on a median strip; therefore, if a traffic barrier exists on a divided highway, **3 (Two-Way, Divided, Positive Median Barrier)** must be used. If it is not known whether a barrier exists or not, assume one does and use **3 (Two-Way, Divided, Positive Median Barrier)** (that is, if a median is known to exist).

**4 (One-Way Trafficway)** is used whenever the trafficway is undivided and traffic flows in one direction (e.g., one-way streets).

**6 (Entrance/Exit Ramp)** is an auxiliary or connecting roadway used for entering or exiting through-traffic lanes of a limited access roadway.

**8 (Not Reported)** *Check to see if [0 \(Non-Trafficway or Driveway Access\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered "**Not Reported**."

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).

2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                                                                |

## PC6 - Total Lanes in Roadway

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.VNUM\_LAN

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 0     | <a href="#">Non-Trafficway or Driveway Access</a> |
| 1     | One Lane                                          |
| 2     | Two Lanes                                         |
| 3     | Three Lanes                                       |
| 4     | Four Lanes                                        |
| 5     | Five Lanes                                        |
| 6     | Six Lanes                                         |
| 7     | Seven or More Lanes                               |
| 8     | <a href="#">Not Reported</a>                      |
| 9     | <a href="#">Reported as Unknown</a>               |

**Definition:** This element identifies the value indicated in the case material that best describes the number of roadway lanes just prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, the roadway selected for classification is the one it is on before entering the junction.

**See the [Coding Guide: Total Lanes in Roadway](#) for helpful information.**

A Trafficway may have several Roads or, if undivided, a single Road. A Road consists of the travel lanes plus any adjacent shoulder(s) or parking lanes. A Trafficway consists of all Roads plus any roadsides, medians, or dividers. The travel lanes constitute the Roadway. A Road is the Roadway plus any adjacent Shoulder(s). The TOTAL LANES IN ROADWAY counted here include the travel lanes but not the shoulder(s).

The number of lanes counted does not include any of which are rendered unusable by restriction of the right-of-way (e.g., closed due to construction).

If turn bays, acceleration, deceleration, or center 2-way left turn lanes exist and are physically located within the cross section of the roadway, and these lanes are the most representative of the driver's environment just prior to the [CRITICAL PRECRASH EVENT](#), then they are to be included in the number of lanes. Because a channelized lane is separated, it should not be included unless it is preceded by a turn bay or turn lane and this bay or lane is felt to be most representative of the driver's environment just prior to impact.

Channelized lanes are separated from other through or turn related lanes. (**NOTE:** The separation normally will not involve a physical barrier.) If the channel is most representative of the driver's critical precrash environment, count the number of lanes in the channel for this element. (See Examples of Channelized lanes [Figure 24](#).)

*Figure 24: Channel with Turn Bay, Channel without Turn Bay*

**0 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#), or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

If traffic flows in both directions and is undivided, code the total number of lanes in both directions. If the trafficway is divided into two or more roadways, code only the number of lanes for the roadway on which this vehicle was traveling. **Be aware that the case material may indicate the total number of lanes on the divided trafficway.**

**8 (Not Reported)** Check to see if [9 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                           |

## PC7 - Speed Limit

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.VSPD\_LIM

### ELEMENT VALUES:

| Codes | Attributes                                                           |
|-------|----------------------------------------------------------------------|
| 00    | <a href="#">No Statutory Limit/Non-Trafficway or Driveway Access</a> |
| 05-95 | Actual Speed Limit (in 5 mph increments)                             |
| 98    | <a href="#">Not Reported</a>                                         |
| 99    | <a href="#">Reported as Unknown</a>                                  |

**Definition:** This element identifies the value indicated in the case material that best represents the speed limit just prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its [CRITICAL PRECRASH EVENT](#), the roadway selected for classification is the one it is on before entering the junction.

**Note:** Refer to the highway speed limit that is operational at the time and place of the crash whether physically displayed or not. Try not to confuse advisory signs on entrance/exit ramps or near intersections with the actual legal maximum speed limit. Disregard advisory or other speed signs since they do not indicate the legal speed limit. If a State has a statute that uniformly reduces the maximum allowable speed limit within or near a construction zone, then code the indicated reduced speed limit, if known.

Acceptable speed limits are in 5 mph increments.

**00 (No Statutory Limit/Non-Trafficway or Driveway Access)** is used when there is no posted speed limit and no law that governs the maximum speed you can drive (dirt roads, private roads open to the public). Also use this attribute in cases when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#) or when the vehicle was in a driveway access prior to its precrash event.

When coding SPEED LIMIT for roadways with two different speed limits (for north and south-bound lanes), use the speed limit for the direction of travel where the [CRITICAL PRECRASH EVENT](#) begins.

When a roadway has a different speed limit for different types of vehicles, code the SPEED LIMIT that is applicable to passenger cars.

**Example:**

A rural Interstate highway has a speed limit of 65 mph for passenger cars, but the same road has a 55 mph speed limit for heavy trucks/buses.

- **Circumstance 1:** A single-vehicle (passenger car) crash. Speed Limit = 65 mph
- **Circumstance 2:** A single-vehicle (heavy truck/bus) crash. Speed Limit = 65 mph
- **Circumstance 3:** A two-vehicle crash, (passenger car and heavy truck/bus) crash. Speed Limit = 65 mph

**Logic:**

Our statisticians feel that it would be more representative to code the SPEED LIMIT of the majority of the traffic, namely the passenger car. In addition, they feel that by identifying the car speed limit of 65 mph, they can then determine the truck speed limit by reviewing the State's speed limit law. (The reverse is not necessarily true.)

**98 (Not Reported)** Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

**Values less than 15 mph are unlikely occurrences and will raise an error flag.**

**FARS SPECIAL INSTRUCTION:**

Accurate coding of SPEED LIMIT is extremely important. Do not rely solely on the police crash report . Check with the State Highway Department as well.

When coding SPEED LIMIT on On/Off Ramps (i.e., when the [CRITICAL PRECRASH EVENT](#) occurs on the ramp), consider the following.

- A. When a ramp has a posted Speed Limit - a regulatory (black on white) sign, not an advisory (black on yellow) one - the posted speed should be coded.
- B. When there is an advisory speed limit or no sign at all, you should:

1. Check with your State Highway Department to see if there is an implicit speed limit for all unmarked ramps. If there is, code speed limit.
2. If there is not, code the speed limit of the controlled access highway.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                           |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| A292            | any TRAFFICWAY DESCRIPTION, TOTAL LANES IN ROADWAY, ROADWAY ALIGNMENT, ROADWAY GRADE, ROADWAY SURFACE TYPE, or ROADWAY SURFACE CONDITIONS equals 0, 00 for this vehicle, | all must equal 0, 00, and SPEED LIMIT must equal 00 for this vehicle. |
| A492            | TRAFFICWAY DESCRIPTION equals 2, 3, 5, 6,                                                                                                                                | SPEED LIMIT must not equal 00.                                        |
| A493            | TRAFFICWAY DESCRIPTION equals 2, 3, 5,                                                                                                                                   | SPEED LIMIT should be greater than 15.                                |
| A521            | any SEQUENCE OF EVENTS equals 46,                                                                                                                                        | SPEED LIMIT should equal 05-55, 98, or 99 for this vehicle.           |

## PC8 - Roadway Alignment

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.VALIGN

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 0     | <a href="#">Non-Trafficway or Driveway Access</a> |
| 1     | <a href="#">Straight</a>                          |
| 2     | <a href="#">Curve - Right</a>                     |
| 3     | <a href="#">Curve - Left</a>                      |
| 4     | <a href="#">Curve - Unknown Direction</a>         |
| 8     | <a href="#">Not Reported</a>                      |
| 9     | <a href="#">Reported as Unknown</a>               |

**Definition:** This element identifies the value indicated in the case material that best represents the roadway alignment prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the **roadway** selected for classification is the one the vehicle departed. For crashes occurring in a channel, consider the ROADWAY ALIGNMENT of the channel itself.

This data element is coded in accordance with the precrash protocols outlined in the [PRECRASH DATA OVERVIEW](#) section of the Coding Manual. In the precrash data elements that record the characteristics of the trafficway, the value coded should be most representative of the driver's critical precrash environment. For resolving ambiguities, the police crash report information is prioritized as follows:

1. The **Narrative** is used if it describes roadway alignment prior to the vehicle's critical precrash event.
2. The **Diagram** is used if it shows the roadway alignment prior to the vehicle's critical precrash event.
3. If the roadway alignment prior to the vehicle's critical precrash event is not described in the Narrative or shown in the Diagram, use the **check-box** information.
4. If the check-box does not exist, is not filled out, or is recorded at the crash level and does not apply to this vehicle's environment, then code [8 \(Not Reported\)](#).

**0 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#) or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

**1 (Straight)** is selected if the case material indicate this vehicle's roadway is straight.

**2 (Curve - Right)** or **3 (Curve - Left)** is selected if the case material indicate this vehicle's roadway is curved or there is any curvature discernable on the diagram.

**4 (Curve - Unknown Direction)** is selected if the case material indicate a curve, but no curve direction (left/right) is indicated.

**8 (Not Reported)** Check to see if [9 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered "**Not Reported**."

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                                                                                                                                      |

| A4D1            | PRE-EVENT MOVEMENT (PRIOR TO RECOGNITION OF CRITICAL EVENT) equals 01,                                                                                                   | ROADWAY ALIGNMENT should not equal 2-4.                                                                                                                                          |
| V539            | <b>CRASH TYPE equals 50-67,</b>                                                                                                                                          | <b>ROADWAY ALIGNMENT should not equal 2 for both vehicles involved in the FIRST HARMFUL EVENT, and should not equal 3 for both vehicles involved in the FIRST HARMFUL EVENT.</b> |

## PC9 - Roadway Grade

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.VPROFILE

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 0     | <a href="#">Non-Trafficway or Driveway Access</a> |
| 1     | Level                                             |
| 3     | <a href="#">Hillcrest</a>                         |
| 5     | Uphill                                            |
| 6     | Downhill                                          |
| 2     | <a href="#">Grade, Unknown Slope</a>              |
| 4     | <a href="#">Sag (Bottom)</a>                      |
| 8     | <a href="#">Not Reported</a>                      |
| 9     | <a href="#">Reported as Unknown</a>               |

**Definition:** This element identifies the value indicated in the case material that best represents the roadway grade prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, the roadway selected for classification is the one it is on before entering the junction. For crashes occurring in a channel, consider the ROADWAY GRADE of the channel itself.

*Figure 25: Diagram of Roadway Grades*

**0 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#) or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

**3 (Hillcrest)** refers to the area of transition between an uphill and a downhill grade.

**2 (Grade, Unknown Slope)** is used if the case material indicate a grade, but uphill/downhill is not indicated.

**4 (Sag [Bottom])** is a designed transition feature between a change of grade at the bottom of a hill. It is not a dip, which is a flaw.

A dip on the road is not the same as a sag. A sag is a design feature whereas a dip is a flaw. The minimum length of a sag is 100 feet.

**8 (Not Reported)** *Check to see if [9 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                           |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 1Z1P            | any SEQUENCE OF EVENTS equals 66,                                                                                                                                        | ROADWAY GRADE should equal 6 for this vehicle.                        |
| A292            | any TRAFFICWAY DESCRIPTION, TOTAL LANES IN ROADWAY, ROADWAY ALIGNMENT, ROADWAY GRADE, ROADWAY SURFACE TYPE, or ROADWAY SURFACE CONDITIONS equals 0, 00 for this vehicle, | all must equal 0, 00, and SPEED LIMIT must equal 00 for this vehicle. |
| A494            | TRAFFICWAY DESCRIPTION equals 6,                                                                                                                                         | ROADWAY GRADE should not equal 3, 4.                                  |

## PC10 - Roadway Surface Type - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.VPAVETYP

**ELEMENT VALUES:**

| Codes | Attributes                                             |
|-------|--------------------------------------------------------|
| 0     | <a href="#">Non-Trafficway Area or Driveway Access</a> |
| 1     | Concrete                                               |
| 2     | Blacktop, Bituminous, or Asphalt                       |
| 3     | Brick or Block                                         |
| 4     | Slag, Gravel, or Stone                                 |
| 5     | Dirt                                                   |
| 7     | Other                                                  |
| 8     | <a href="#">Not Reported</a>                           |
| 9     | Reported as Unknown                                    |

**Definition:** This element identifies the value indicated in the case material that best represents the roadway surface type prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, the roadway selected for classification is the one it is on before entering the junction.

Should be obtained from the crash report or the State Highway Department.

If the police crash report narrative states more than one type, choose the type with the lowest number. For example, if the PCR indicates both dirt and gravel are present, then use code **4 (Slag, Gravel, or Stone)** because it is a lower number than **5 (Dirt)**. If the PCR has a combination code selected such as "Dirt/Gravel" without further explanation, and you cannot determine if the officer is indicating dirt or gravel, or both dirt and gravel, then use code **8 (Not Reported)**.

**0 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its [CRITICAL PRECRASH EVENT](#) or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

If a police crash report data element is coded with the attribute "Other" but the officer does not specify what this refers to:

1. Code **7 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **8 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**8 (Not Reported) Check to see if 9 (Reported as Unknown) is more appropriate for the situation.**

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                               |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| A160            | LAND USE AND FUNCTIONAL SYSTEM (b) equals 01-06,                                                                                                                         | ROADWAY SURFACE TYPE should equal 1, 2, 8, or 9 for at least one vehicle. |
| A170            | ROADWAY SURFACE TYPE equals 3-5 for every vehicle,                                                                                                                       | LAND USE AND FUNCTIONAL SYSTEM (b) should not equal 01-06.                |
| A292            | any TRAFFICWAY DESCRIPTION, TOTAL LANES IN ROADWAY, ROADWAY ALIGNMENT, ROADWAY GRADE, ROADWAY SURFACE TYPE, or ROADWAY SURFACE CONDITIONS equals 0, 00 for this vehicle, | all must equal 0, 00, and SPEED LIMIT must equal 00 for this vehicle.     |
| A330            | ROUTE SIGNING equals 1, 2,                                                                                                                                               | ROADWAY SURFACE TYPE should equal 1, 2, 8 for at least one vehicle.       |
| A490            | TRAFFICWAY DESCRIPTION equals 2, 3, 5,                                                                                                                                   | ROADWAY SURFACE TYPE should not equal 4, 5, 7.                            |
| A500            | TOTAL LANES IN ROADWAY equals 3-7,                                                                                                                                       | ROADWAY SURFACE TYPE should not equal 4, 5, 7.                            |

## PC11 - Roadway Surface Conditions

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.VSURCOND

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 00    | <a href="#">Non-Trafficway or Driveway Access</a> |
| 01    | <a href="#">Dry</a>                               |
| 02    | <a href="#">Wet</a>                               |
| 03    | <a href="#">Snow</a>                              |
| 10    | <a href="#">Slush</a>                             |
| 04    | <a href="#">Ice/Frost</a>                         |
| 06    | <a href="#">Water (Standing, Moving)</a>          |
| 05    | <a href="#">Sand</a>                              |
| 11    | <a href="#">Mud, Dirt, Gravel</a>                 |
| 07    | <a href="#">Oil</a>                               |
| 08    | <a href="#">Other</a>                             |
| 98    | <a href="#">Not Reported</a>                      |
| 99    | <a href="#">Reported as Unknown</a>               |

**Definition:** This element identifies the value indicated in the case material that best represents the roadway surface condition prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

**Remarks:** For vehicles departing the trafficway prior to their [CRITICAL PRECRASH EVENT](#), the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, the roadway selected for classification is the one it is on before entering the junction. These conditions may have been present but did not necessarily contribute to the crash.

If more than one surface condition is indicated for this vehicle (e.g., with a combination code such as “slush/Ice”), then select the condition, if specified in case material, that would have most affected the vehicle's traction. If there is not enough information available to distinguish if one or both of the surface conditions were applicable during the time of the crash, use [98 \(Not Reported\)](#).

**00 (Non-Trafficway or Driveway Access)** is used when this vehicle is entering a trafficway but was not on a trafficway prior to its EVENT or when the vehicle was in a driveway access prior to its CRITICAL PRECRASH EVENT.

A road made of sand or dirt would be coded **01 (Dry)** under normal conditions, not **05 (Sand)**, or **11 (Mud, Dirt, Gravel)**.

**02 (Wet)** describes a roadway surface that is covered with water from rain or melted snow.

**03 (Snow)** describes a roadway surface that is covered with snow.

**10 (Slush)** describes a roadway surface that is covered with melting snow.

**04 (Ice/Frost)** includes a roadway covered with ice from freezing rain or water runoff that has pooled on the roadway and turned to ice.

**06 (Water [Standing, Moving])** describes a roadway surface that is covered with water and typically localized.

**05 (Sand)** includes sand on the roadway as a result of sand blown by wind or sand discharged on the roadway by highway trucks.

**11 (Mud, Dirt, Gravel)** indicates these substances present on the surface of the roadway at the crash location, not the surface type of the roadway by design.

**07 (Oil)** includes fuel spilled on the roadway.

**08 (Other)** is used for roadway surface conditions not described above.

If a police crash report data element is coded with the attribute “Other,” but the officer does not specify what this refers to:

1. Code **08 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **98 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Not Reported)** *Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                | <b>THEN</b>                                                                 |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 1A1P            | RELATED FACTORS-CRASH LEVEL equals 005,                                                                                                                                  | ROADWAY SURFACE CONDITIONS must equal 06 for at least one vehicle.          |

| 98    | <a href="#">Other</a>                   |

### Not Reported and Unknown

| Codes | Attributes                          |
|-------|-------------------------------------|
| 97    | <a href="#">Not Reported</a>        |
| 99    | <a href="#">Reported as Unknown</a> |

Definition: This element identifies the sign or signal indicated in the case material that best describes the traffic controls in the vehicle's environment just prior to this vehicle's [CRITICAL PRECRASH EVENT](#).

Remarks: The roadway used for coding this element is the one this vehicle departed if it is off the roadway just prior to its [CRITICAL PRECRASH EVENT](#). If this vehicle is in a junction just prior to its CRITICAL PRECRASH EVENT, this element is coded based on the roadway this vehicle was on before entering the junction.

Code the attribute indicated in the case material if it directly matches. Devices known to be missing should be coded as the type of device and under DEVICE FUNCTIONING coded as [1 \(Device Not Functioning\)](#).

Code this element whether the device was functioning or not. If more than one device is present, code the highest device (lowest number on list) most related to the crash.

There are *three* exceptions:

1. One exception is [50 \(Person\)](#) which includes a law enforcement officer, crossing guard, flagman, etc.  
**50 (Person)** takes precedence over the entire list.
2. The *second* exception is a [28 \(Other Regulatory Sign\)](#). You may have a Regulatory Speed Limit Sign along with another TRAFFIC CONTROL DEVICE. *For example, a Warning Sign for a dangerous condition in which the Warning Sign is more relevant in the crash. In this case, the [40 \(Warning Sign\)](#) is more appropriate to code.*
3. *The third exception is [65 \(Railway Crossing Device\)](#). The various railway crossing devices take precedence over [40 \(Warning Sign\)](#) when both “flashing lights on an approaching train” and a railway crossing device are present.*

#### MUTCD Notes:

- Traffic calming devices:
  - Although some highway design features, such as curbs, median barriers, guardrails, speed humps or tables, and textured pavement, have a significant impact on traffic operations and safety, they are not considered to be traffic control devices and provisions regarding their design and use are generally not included.
- Pavement markings:
  - While pavement markings are considered Traffic Control Devices in MUTCD, this element should only be used to identify Signs and Signals.

**00 (No Controls)** is used if, at the time of the crash, there was no intent to control (regulate or warn) vehicle traffic. Use this attribute if statutory controls apply (e.g., State law requires that when two vehicles meet at an uncontrolled intersection, the one on the right has the right-of-way).

When a traffic control is deactivated (e.g., traffic signal that emits no signals) during certain times of the day and was deactivated at the time of the crash, code **00 (No Controls)**. A traffic control that has just been installed and not yet activated is also coded **00 (No Controls)**.

However, a traffic control that is out (e.g., due to a power failure) and was reported as such in the case material, is coded, unless a temporary control (e.g., stop sign, police officer, etc.) has been inserted, in which case the temporary control should be coded. Devices known to be missing should be coded as the type of device and under DEVICE FUNCTIONING coded as [1 \(Device Not Functioning\)](#).

### ***Traffic Signals***

**01 (Traffic Control Signal [on colors] without Pedestrian Signal)** refers to any highway traffic signal by which traffic is alternatively directed to stop and permitted to proceed, using the colors of red, yellow, and green. This traffic control signal does not have a pedestrian control signal. The source of actuation is of no concern.

**02 (Traffic Control Signal [on colors] with Pedestrian Signal)** refers to any highway traffic signal by which traffic is alternatively directed to stop and permitted to proceed, using the colors of red, yellow, and green. This traffic control signal does have a pedestrian control signal. The source of actuation is of no concern.

**03 (Traffic Control Signal [on colors] not known whether or not Pedestrian Signal)** any highway traffic signal by which traffic is alternatively directed to stop and permitted to proceed, using the colors of red, yellow, and green. It is unknown if this traffic control signal has a pedestrian control signal. The source of actuation is of no concern.

**07 (Lane Use Control Signal)** is for permanent lane control electronic devices (i.e., overhead lights or “X” indicating lane open or closed for rush hour lanes, bridges, or at tollbooths).

**08 (Other Highway Traffic Signal)** should be coded for traffic signals that are not covered in the preceding attributes. Use this attribute when a School Bus uses flashing lights to control traffic around the bus, regardless of any additional signs the school bus uses. For example, a school bus uses flashing lights and a stop sign on an arm to stop traffic around the school bus. This should only be used if the crash occurred during the time the sign was in effect.

**09 (Unknown Highway Traffic Signal)** is used with the investigating officer reported that the highway traffic signal was unknown at the time of crash.

**04 (Flashing Traffic Control Signal)** usually has a single colored head and flashes. Use this attribute if it is a Highway Traffic Signal that is flashing. This includes a flashing beacon. If a flashing red beacon appears with a stop sign, use this attribute.

Guide signs do not constitute traffic controls.

You may have a Regulatory Speed Limit Sign along with another Traffic Control Device (for example, a Warning Sign for a dangerous condition in which the Warning Sign is more relevant in the crash). In this case, the Warning Sign is more appropriate to code.

Another set of questions arises from the issue of proximity of the device to the crash. Judgment must be applied in these situations. Typical signs that create such problems are:

- Speed limit signs where a party to the crash may be speeding.
- “Do Not Pass” signs where a no passing zone extends for miles but is only marked at the beginning of the zone.
- “Pedestrians Prohibited” signs at entrances to freeways, but a pedestrian crash occurs on the freeway between interchanges.
- And other such signs that may pertain to a significant length of road.

In these instances, if the crash occurs within reasonably close proximity of the sign and the sign type is relevant to the crash, then it may be appropriate to code the sign.

If there is a question as to which type a sign is, consult the [Manual of Uniform Traffic Control Devices \(MUTCD\)](#). Generally, the appropriate code should be used if a party to the crash failed to heed the sign, was in a position to be controlled by the sign, or the sign has some relationship to the crash. For example, for a crash at a four-legged, two-way stop intersection where a driver fails to stop at the stop sign and collides with another vehicle, use the attribute **20 (Stop Sign)**. Conversely, at the same intersection, a driver on an approach not controlled by a stop sign loses control and strikes a utility pole. In this case, **20 (Stop Sign)** would not be appropriate.

Pavement markings are not considered as traffic control devices.

### ***Regulatory Signs***

**20 (Stop Sign)** is a traffic sign used to control vehicular traffic, usually erected at road junctions, which instructs drivers to stop and then to proceed only if the way ahead is clear. This attribute does not include Stop Signs at Rail Grade Crossings. Stop Signs at Rail Grade Crossings are coded [65 \(Railway Crossing Device\)](#).

**21 (Yield Sign)** indicates that a vehicle driver must slow down and prepare to stop if necessary, usually while merging into traffic on another road but needn’t stop if the way is clear. This attribute does not include Yield Signs at Rail Grade Crossings. Yield Signs at Rail Grade Crossings are coded [65 \(Railway Crossing Device\)](#).

### **28 (Other Regulatory Sign)**

Regulatory signs inform highway users of traffic laws or regulations and indicate the applicability of legal requirements that would not otherwise be apparent.

Examples of Regulatory Signs other than [20 \(Stop Sign\)](#) or [21 \(Yield Sign\)](#) are:

- Regulatory Speed Limit signs (black numbers on a white background)
- Turn Prohibition signs
- Do Not Pass
- Do Not Enter signs
- Wrong way
- One-way signs

- Road Closed signs
- Hazardous Cargo signs

**29 (Unknown Regulatory Sign)** is used when the investigating officer reported that the regulatory sign was unknown at the time of crash.

**23 (School Zone Sign/Device)** is used when the [FIRST HARMFUL EVENT](#) occurred during the time the sign was in effect. If the sign was in effect, it does not matter whether children were present. Some **23 (School Zone Signs/Devices)** can be flashing, if this is the case, use this attribute before using [04 \(Flashing Traffic Control Signal\)](#).

### ***Other Signs and Signals***

**40 (Warning Sign)** is used when it is deemed necessary to warn traffic of existing or potentially hazardous conditions on or adjacent to a highway or street.

#### **Examples of Warning Signs:**

- Work/Construction Zone related signs (Lane Shift, Uneven Surface, Workers Ahead, etc.).
- Changes in Horizontal Alignment signs (Hill, Curve, etc.).
- Road Narrows.
- Divided Road/Divided Road Ends.
- Low Clearance.
- Road Surface Condition signs (Bump, Slippery When Wet, etc.).
- Traffic Flow signs (Merge, Two-way Traffic, No Passing Zone, etc.).
- This includes electronic warning signs such as portable signs (i.e., attached to a vehicle), or stationary devices.
- Flashing lights on an approaching train.
- Advisory Speed signs (often black-on-yellow).

**65 (Railway Crossing Device)** is used to control or warn vehicular traffic at a railway crossing.

#### **Examples:**

- Flashing Lights,
- Wigwags,
- Bells,
- Cross Bucks,
- Stop Signs at Rail Grade Crossing.
- Yield Signs at Rail Grade Crossings.

**50 (Person)** is someone (e.g., police officer, crossing guard, flagman, or officially designated person) who is in the act of controlling both vehicular and pedestrian traffic.

**98 (Other)** includes: any other device, which (a) functions as a traffic control device that is not listed as an attribute of this data element, (b) is not excluded by the manual, and (c) is related to the crash. Some examples are barricades, cones, drums, and object markers.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **98 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **97 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

### ***Not Reported and Unknown***

**97 (Not Reported)** Check to see if [00 \(No Controls\)](#) or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered “**Not Reported.**”

Code **97 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used if the investigating officer reported that the traffic control device at the time of crash was not known.

### **Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                     | <b>THEN</b>                                                                                                                                |

| 3     | <a href="#">Device Functioning Properly</a>                                                |
| 8     | <a href="#">Not Reported</a>                                                               |
| 9     | <a href="#">Reported as Unknown</a>                                                        |

**Definition:** This element identifies the functionality of the traffic control device recorded for this vehicle in the element [TRAFFIC CONTROL DEVICE](#).

**Remarks:** This data element is coded with respect to the control selected in the element [TRAFFIC CONTROL DEVICE](#).

**1 (Device Not Functioning)** is used when the device is not functioning at all (e.g., signal out, sign knocked down). Devices known to be missing should be coded here.

**2 (Device Functioning - Functioning Improperly)** is used when the device was functioning to an extent but not as intended (e.g., red signal lamp burned out, sign twisted, or obscured by vegetation).

**4 (Device Not Functioning or Device Functioning Improperly, Specifics Unknown)** is used when the case material indicate the traffic control device was not functioning as designed at the time of the crash, but a differentiation between codes **1 (Device Not Functioning)** and **2 (Device Functioning - Functioning Improperly)** cannot be determined. An example of this may be a contributing circumstance field value such as “Traffic control device inoperative, missing, or obscured” without clarifying information in the case material.

**3 (Device Functioning Properly)** is used when the traffic control device was functioning as designed at the time of the crash. As a default rule, if the device is listed as present, code **3 (Device Functioning Properly)** unless specified otherwise. For example, the police crash report indicates a stop sign is applicable to a vehicle at an intersection crash and there is no mention of it functioning improperly, it is assumed the stop sign was functional.

**8 (Not Reported)** *Check to see if 0 (No Controls) or [9 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered “**Not Reported.**”

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used if the investigating officer reported that it was unknown if the traffic control device was functioning at the time of crash.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                  | <b>THEN</b>                                      |
|-----------------|--------------------------------------------|--------------------------------------------------|
| 610P            | TRAFFIC CONTROL DEVICE equals 00,          | DEVICE FUNCTIONING must equal 0.                 |
| 660P            | TRAFFIC CONTROL DEVICE is not equal to 00, | DEVICE FUNCTIONING must not equal 0.             |
| 660Q            | TRAFFIC CONTROL DEVICE does not equal 97,  | it is unlikely that DEVICE FUNCTIONING equals 8. |
| 661P            | TRAFFIC CONTROL DEVICE equals 97,          | DEVICE FUNCTIONING must equal 8.                 |

## PC14 - Driver's Vision Obscured By

**FORMAT:** 2 numeric. Select All That Apply.

**SAS NAME:** *Vision.VISION*

**ELEMENT VALUES:**

| Codes | Attributes                                                      |

| 12    | <a href="#">External Mirrors</a>                                |
| 13    | <a href="#">Broken or Improperly Cleaned Windshield</a>         |
| 14    | <a href="#">Obstructing Angles on Vehicle</a>                   |
| 95    | <a href="#">No Driver Present/Unknown if Driver Present</a>     |
| 97    | <a href="#">Vision Obscured - No Details</a>                    |
| 98    | <a href="#">Other Visual Obstruction</a>                        |
| 99    | <a href="#">Reported as Unknown</a>                             |

**Definition:** This data element records impediments to a driver's visual field that were noted in the case material.

**Remarks:** These "visual obstructions" can appear anywhere in the case material. Examples include a field on the police crash report (e.g., "Contributing Factors"), in the narrative section, in the violations section, or in witness statements. See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

**00 (No Obstruction Noted)** is used when the case material give no indication of a visual obstruction for this driver.

**01 (Rain, Snow, Fog, Smoke, Sand, Dust)** is used when one or more of these conditions exist AND are noted to have obstructed the view of the driver. Do not use this attribute when only the

vehicle windshield is described as “fogged.” (See [09 \(Inadequate Defrost or Defog System\)](#) or [13 \(Broken or Improperly Cleaned Windshield\)](#).)

**02 (Reflected Glare, Bright Sunlight, Headlights)** is used when one or more of these conditions are noted to have obstructed the view of the driver.

**03 (Curve, Hill, or Other Roadway Design Feature)** is used when any of these roadway features or design elements is noted to have obstructed the view of the driver (including embankment, sag, etc.).

**04 (Building, Billboard, Other Structure)** is used when any of these man-made structures are noted to have obstructed the view of the driver (including traffic signs, poles, signals, etc.).

**05 (Trees, Crops, Vegetation)** is used when any of these natural features are noted to have obstructed the view of the driver.

**06 (In-Transport Motor Vehicle [including load])** is used when a vehicle that is in motion or stopped on the roadway is noted to have obstructed the view of the driver. The vehicle may be but does not have to be a contact vehicle in the case.

**07 (Not In-Transport Motor Vehicle [parked, working])** is used when a vehicle that is parked in a designated parking area or space, stopped in an area off the roadway, or is a working motor vehicle is noted to have obstructed the view of the driver. The vehicle may be but does not have to be a contact vehicle in the case.

**08 (Splash or Spray of Passing Vehicle)** is used when this condition is noted to have obstructed the view of the driver. The splash or spray can come from water or mud; however, the use of this attribute does not require it to be raining at the time of the crash.

**09 (Inadequate Defrost or Defog System)** is used when the presence of frost or fog on the windshield was noted as being due to an inadequate system. The case material must state specifically that the system was not operating properly. If the case material states the presence of frost or fog alone on the windshield, you should use [13 \(Broken or Improperly Cleaned Windshield\)](#).

**10 (Inadequate Vehicle Lighting System)** is used when the case material indicate this driver’s vision was impaired because the exterior lighting system (including headlights, fog-lights, etc.) of the driver’s vehicle was deficient in some way. This would include being turned off or not operating properly. This response should not be used to describe inadequate lighting systems of other vehicles (e.g., oncoming motor vehicles) or for inadequate highway lighting.

**11 (Obstruction Interior to the Vehicle)** is used when the case material indicate this driver’s vision was impaired because of a feature in the interior of their vehicle (including head restraint, rear-view mirror, window stickers, sunshades, ornaments, windshield tinting).

**12 (External Mirrors)** is used when the case material indicate that an exterior mirror on this driver’s vehicle created a visual obstruction.

**13 (Broken or Improperly Cleaned Windshield)** is used when this condition is noted to have obstructed the view of the driver. The presence of frost or fog on the windshield would apply. For a “fogged” or “frosted” windshield due to an inadequate or inoperable system see [09 \(Inadequate Defrost or Defog System\)](#).

**14 (Obstructing Angles on Vehicle)** is used when the case material indicate that the size or shape of a driver's own vehicle created a visual obstruction (including trailer, vehicle height, blind spot). Not to be confused with visual obstructions from other vehicles or a vehicle's interior components such as head restraints, sunshades, etc.

**95 (No Driver Present/Unknown if Driver Present)** is used when there is no driver in this vehicle or when it is unknown if there is a driver present in this vehicle at the time of the crash.

**97 (Vision Obscured - No Details)** is used when the case material indicate that a vision impediment exists but does not clearly indicate the nature of the impediment.

**98 (Other Visual Obstruction)** is used when the case material indicate the nature of a vision impediment that cannot be attributed to one of the other attributes above. For example, an unattached trailer left on the road shoulder.

**99 (Reported as Unknown)** is used when the case material specifically indicate unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                             | <b>THEN</b>                                                                                                                                                        |

## PC15 - Driver Maneuvered to Avoid

**FORMAT:** 2 numeric. Select All That Apply

**SAS NAME:** *Maneuver.MANEUVER*

**ELEMENT VALUES:**

| Codes | Attributes                                                        |
|-------|-------------------------------------------------------------------|
| 00    | <a href="#">Driver Did Not Maneuver to Avoid</a>                  |
| 01    | <a href="#">Object</a>                                            |
| 02    | <a href="#">Poor Road Conditions (Puddle, Ice, Pothole, etc.)</a> |
| 03    | <a href="#">Live Animal</a>                                       |
| 04    | <a href="#">Contact Motor Vehicle (in this Crash)</a>             |
| 05    | <a href="#">Pedestrian, Pedalcyclist, or Other Non-Motorist</a>   |
| 92    | <a href="#">Phantom/Non-Contact Motor Vehicle</a>                 |
| 95    | <a href="#">No Driver Present/Unknown if Driver Present</a>       |
| 98    | <a href="#">Not Reported</a>                                      |
| 99    | <a href="#">Reported as Unknown</a>                               |

**Definition:** This data element identifies the thing(s) the driver attempted to avoid while the vehicle was on the road portion of the trafficway, just prior to the first harmful event for this vehicle.

**Remarks:** The “road” by definition includes the roadway and shoulder/parking lane portions when a shoulder/parking lane is present. The source for this data is the crash report narrative or related crash report form fields as completed by the investigating officer. It is the officer’s assessment. See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

**Use the available crash report fields, narrative, and diagram to code the thing(s) the driver attempted to avoid while the vehicle was on the road portion of the trafficway, just prior to the first harmful event for this vehicle.** Code the thing(s) the driver tried to avoid whether the maneuver was successful or not (i.e., whether the driver was able to avoid the object, poor road condition, animal, vehicle, or non-motorist or not).

**Currently there are no State crash reports having fields, which by themselves, can be applied to code this element. Some State crash reports do have fields containing relevant information to consider such as Driver Contributing Circumstances, Vehicle Maneuver, Roadway Factors, Avoidance Maneuvers, or Environmental Circumstances. However, the data in these fields will rarely provide all the information needed to code DRIVER MANEUVERED TO AVOID.**

**00 (Driver Did Not Maneuver to Avoid)** is used when:

- The officer reports that no avoidance maneuvers were taken by the driver.
- The avoidance maneuver(s) occurred after the first harmful event for the vehicle.
- The avoidance maneuver occurred when the vehicle was not on a roadway, shoulder, or parking lane.

***Lack of definitive avoidance information in the report (absence of information) should not be coded as 00 (Driver Did Not Maneuver to Avoid). See [98 \(Not Reported\)](#) for absence of information situations.***

***Examples of when 00 (Driver Did Not Maneuver to Avoid) CAN be coded:***

- *The crash report narrative says the FHE event for a motor vehicle “stopped in traffic” is a collision with motor vehicle in motion. “Stopped in traffic” during the entire Critical Crash Envelope (CCE) means the driver did not avoid anything prior to the vehicle’s FHE.*
- *The case material indicate the driver did not try to avoid anything on the road prior to the vehicle’s FHE because:*
  - *the driver did not have time to react*
  - *the driver was asleep or unconscious*
  - *the driver did not see or recognize there was anything to avoid*
- *The crash description identifies the driver did not try to avoid anything in the road prior to its FHE. For example, the crash report narrative says “The vehicle drifted off the road because the driver was talking on a cell phone. The driver tried to recover back to the road, lost control, and hit a tree.”*

**01 (Object)** is used when the driver attempted to avoid a non-fixed object such as: an animal carcass, an unattached trailer, a bicycle without a rider, downed tree limbs or power lines, debris from a previous crash, rocks that fall from an adjacent hillside, a load that fell from another vehicle, debris left from a tire blowout, etc.

**02 (Poor Road Conditions [Puddle, Ice, Pothole, etc.])** is used when the driver maneuvered to avoid the location of a road condition. Treat the condition as if it were an object. Do not use this attribute if the driver lost control while traveling on/over the road condition but made no maneuver to avoid it.

**03 (Live Animal)** is used when the driver attempted to avoid a live animal that is stationary or moving. A dead animal carcass is considered debris and coded as [01 \(Object\)](#).

**04 (Contact Motor Vehicle (in this Crash))** is used when the driver attempted to avoid another **contact** motor vehicle in the crash (**receives a vehicle form**). This includes in-transport, parked, or working motor vehicles. A trailer not connected to a motor vehicle would be considered an [01 \(Object\)](#).

**05 (Pedestrian, Pedalcyclist, or Other Non-Motorist)** is used when the driver attempts to avoid a pedestrian, pedalcyclist, or other non-motorist. Other Non-motorist would include people riding on an animal, or in an animal drawn conveyance or on a personal conveyance. A person

killed in a previous crash or an unoccupied pedalcycle or personal conveyance would be considered an [01 \(Object\)](#).

**92 (Phantom/Non-Contact Motor Vehicle)** is used when the driver attempted to avoid another motor vehicle in the crash that was reported as a **non-contact** or phantom vehicle (**does not receive a [vehicle form](#)**). This includes in-transport, parked, or working motor vehicles. A trailer not connected to a motor vehicle would be considered an [01 \(Object\)](#).

**95 (No Driver Present/Unknown if Driver Present)** is used when there is no driver in this vehicle or when it is unknown if there is a driver present in this vehicle at the time of the crash.

**98 (Not Reported)** *Check to see if [00 \(Driver Did Not Maneuver to Avoid\)](#) or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered "**Not Reported**."

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when the information about a particular vehicle's circumstances are reported as "unknown."

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                           | THEN                                                                           |
|----------|--------------------------------------------------------------|--------------------------------------------------------------------------------|
| 3BCP     | CRASH TYPE equals 34, 36, 38, 40, 54, 56, 58, or 60,         | DRIVER MANEUVERED TO AVOID must not equal 00.                                  |
| 41IP     | TRAVEL SPEED is equal to 000,                                | DRIVER MANEUVERED TO AVOID should equal 00 <b>or</b> 95.                       |
| 9C4P     | UNIT TYPE equals 1, and DRIVER PRESENCE equals 0 or 9,       | DRIVER MANEUVERED TO AVOID must only equal 95.                                 |
| 9C5P     | DRIVER MANEUVERED TO AVOID equals 95,                        | DRIVER PRESENCE must equal 0 or 9.                                             |
| AZ6P     | any DRIVER MANEUVERED TO AVOID equals 00,                    | PRE-EVENT MOVEMENT (PRIOR TO RECOGNITION OF CRITICAL EVENT) must not equal 17. |
| AZ7P     | any DRIVER MANEUVERED TO AVOID equals 00 or 95 or 98, or 99, | only that one code and no other must be coded for this vehicle.                |
| AZBP     | any DRIVER MANEUVERED TO AVOID equals 03,                    | CRITICAL EVENT - PRECRASH (EVENT) should equal 87-89.                          |

| <b>Error ID</b> | <b>IF</b>                                                                                                                  | <b>THEN</b>                                                 |

| 98    | <a href="#">Other Distraction (Specify:)</a>                                   |

**Definition:** This element identifies the attribute(s) that best describe this driver's attention to driving prior to the driver's realization of an impending critical event or just prior to impact if realization of an impending critical event does not occur. This element reports on the presence of

any distractions that may or may not have contributed to the crash. Distraction from the primary task of driving occurs when drivers divert their attention from the driving task to some other activity. Also, driving while daydreaming or lost in thought is identified as distracted driving by NHTSA. Physical conditions/impairments (fatigue, alcohol, medical condition, etc.) or psychological states (anger, emotional, depressed, etc.) are not identified as distractions by NHTSA.

**NOTE:** *"Presence" is not the same as an activity associated with the person or item. The driver needs to be engaged in some activity associated with the thing that is causing a distraction. Just having a mobile phone, sandwich, passenger, etc. in the vehicle isn't a distraction. The distraction is when the driver's attention is diverted from driving to using the phone, eating the sandwich, turning around to talk to a backseat passenger, etc. It doesn't have to be a contributing factor in the crash, but it does have to be in use, engaged, the person was doing it at the time, etc. for it to have been a distraction.*

**Remarks:** Record the attribute(s) that best describe this driver's attention to driving prior to the driver's realization of an impending critical event or just prior to impact if realization of an impending critical event does not occur. If this driver's vehicle has two critical crash envelopes, record the attribute(s) that best describe the driver's attention prior to the first [CRITICAL PRECRASH EVENT](#) (i.e., prior to realization of the impending danger that the driver successfully avoided). Intoxication, Ill, Blackout, Asleep, or Fatigued are not considered distractions. This information is captured under the data element [CONDITION \(IMPAIRMENT\) AT TIME OF CRASH](#).

DRIVER DISTRACTED BY is a "Select All That Apply" element. If the element values [00 \(Not Distracted\)](#), [16 \(No Driver Present\)](#), [17 \(Distraction/ Inattention\)](#), [18 \(Distraction/Careless\)](#), [19 \(Careless/Inattentive\)](#), [92 \(Distraction \[Distracted\], Details Unknown\)](#), [93 \(Inattention \[Inattentive\], Details Unknown\)](#), [96 \(Not Reported\)](#), or [99 \(Reported as Unknown if Distracted\)](#) are selected, then only that one element value may be used.

### **Witness Statements:**

See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

#### **00 (Not Distracted)**

- When the case material indicate that the individual was completely attentive to driving.
- When the case material does not indicate a distraction in an available field, and not reporting a distraction in that field indicates 00 (Not Distracted).
- For omission of information see 96 (Not Reported) guidance below.

**16 (No Driver Present/Unknown if Driver Present)** is used when there is no driver in this vehicle or when it is unknown if there is a driver present in this vehicle at the time of the crash.

**96 (Not Reported)** Check to see if 00 (Not Distracted) or 99 (Reported as Unknown if Distracted) are more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **96 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Distracted)** is used when the case material specifically indicate unknown.

***Distractions:***

**03 (By Other Occupant[s])** is used when the driver was distracted by another occupant in this driver's vehicle prior to realization of impending danger. Examples of other occupant distraction include conversing with or looking at another occupant (baby/child in back seat, rowdy teenager, argumentative spouse, etc.).

**04 (By a Moving Object in Vehicle)** is used when the driver was distracted by a moving object in this driver's vehicle prior to realization of impending danger. Examples include a dropped object, a moving pet, insect, or cargo.

**05 (While Talking or Listening to Mobile Phone)** is used when the driver is talking or listening on a mobile phone. This attribute includes talking or listening on a "hands-free" or Bluetooth enabled phone.

**06 (While Manipulating Mobile Phone)** is used when the driver is dialing or text messaging (texting) on a mobile phone. Any manual button/control actuation on the phone qualifies. This includes dialing or text messaging on any wireless e-mail device.

**15 (Other Mobile Phone Related)** is used when the case material indicates the driver is distracted from the driving task due to mobile phone involvement, but none of the specified codes are applicable (reaching for mobile phone, etc.). This attribute is also applied when specific details regarding mobile phone distraction/usage are not provided (*e.g., email, nonspecific mobile phone use*).

**07 (Adjusting Audio or Climate Controls)** is used when someone is distracted from the driving task while adjusting the air conditioner, heater, radio, cassette, using the radio, using the cassette, or CD that are mounted in the vehicle.

**09 (While Using Other Component/Controls Integral to Vehicle)** is used when the driver is distracted while manipulating a control in the vehicle including adjusting headlamps or interior lights, controlling windows (power or manual), manipulating door locks (power or manual),

adjusting side view mirrors (power or manual), adjusting rear view mirror, adjusting seat (power or manual), adjusting steering wheel, adjusting seat belt, on-board navigational devices, etc. (original equipment).

**10 (While Using or Reaching for Device/Object Brought into Vehicle)** is used when the driver is distracted while using or reaching for a device in the vehicle including a radar detector, CDs, razors, music portable CD player, headphones, a navigational device, laptop or tablet PC, etc. This attribute is also used when it cannot be determined if the involved device was OEM, brought into the vehicle, or a function of a mobile phone (i.e., GPS).

If it is unknown if the device or object was brought into the vehicle or was original equipment on this vehicle, default to brought into vehicle and use attribute **10 (While Using or Reaching for Device/Object Brought into Vehicle)**.

**12 (Distracted by Outside Person, Object, or Event)** is used when the driver was distracted by an outside person, object, or event prior to realization of impending danger. Examples include animals on the roadside, a previous crash, or non-traffic related signs (advertisements, electronic billboards, etc.). Do not use this attribute for a person, object, or event that the driver has recognized and for which the driver has taken some action (e.g., avoiding a pedestrian on the roadway).

**13 (Eating or Drinking)** is used when the driver is eating or drinking or involved in an activity related to these actions (picking food from carton placed on passenger seat, reaching to throw out used food wrapper, etc.).

**14 (Smoking Related)** is used when the driver is smoking or involved in an activity related to smoking, such as lighting a cigarette, putting ashes in the ash tray, vaping, etc. Any method of lighting the cigarette would be coded **14 (Smoking Related)**. Chewing tobacco related distractions are coded under **98 (Other Distraction [Specify: ])**.

**17 (Distraction/Inattention)** is used **exclusively** when “Distraction/Inattention” or “Inattention/Distraction” are noted in the case material as one combined attribute and it cannot be determined which DRIVER DISTRACTED BY attribute is intended, **92 (Distraction [Distracted], Details Unknown)** or **93 (Inattention [Inattentive], Details Unknown)**.

**18 (Distraction/Careless)** is used **exclusively** when “Distraction/Careless” or “Careless/Distraction” are noted in the case material as one combined attribute and it cannot be determined which DRIVER DISTRACTED BY attribute applies.

**19 (Careless/Inattentive)** is used **exclusively** when “Careless/Inattentive” or “Inattentive/Careless” are noted in the case material as one combined attribute and it cannot be determined which DRIVER DISTRACTED BY attribute applies.

**92 (Distraction [Distracted], Details Unknown)** is used when “distraction” or “distracted” are noted in the case material, but specific distraction(s) cannot be identified. For non-specific “inattention,” see attribute

**93 (Inattention [Inattentive], Details Unknown)**.

**93 (Inattention [Inattentive], Details Unknown)** is used when “inattention” or “inattentive” are noted in the case material, but it cannot be identified if this refers to a distraction(s).

**97 (Lost in Thought/Day Dreaming)** is used when the driver is not completely attentive to driving because he/she is thinking about items other than the driving task. For non-specific

“distraction,” see [92 \(Distraction \[Distracted\], Details Unknown\)](#). For non-specific “inattention,” see [93 \(Inattention \[Inattentive\], Details Unknown\)](#).

**98 (Other Distraction [Specify:])**\* is used when details regarding this driver’s distraction are known but none of the specified codes are applicable (e.g., chewing tobacco related).

**\*Note: For attributes with a “Specify:” designation, a fill-in text box will open in RBIS.** This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**Consistency Checks** [\(See Section 400\)](#):

| 98    | <a href="#">Other (Specify:)</a>                                           |
| 99    | <a href="#">Unknown</a>                                                    |

**Definition:** This element identifies the attribute that best describes this vehicle’s activity prior to the driver’s realization of an impending critical event or just prior to impact if the driver took no action or had no time to attempt any evasive maneuvers.

**Remarks:** Record the attribute that best describes this vehicle’s activity **prior** to the driver’s realization of an impending critical event or just **prior** to impact if the driver took no action or had no time to attempt any evasive maneuvers.

Actions taken by the driver, of this vehicle, **after realization** of an impending danger are captured in [ATTEMPTED AVOIDANCE MANEUVER](#).

**00 (No Driver Present/Unknown if Driver Present)** is pre-coded for in-transport motor vehicles when the element [DRIVER PRESENCE](#) is coded as [0 \(No Driver Present/Not Applicable\)](#).

**01 (Going Straight)** is used when this vehicle's path of travel was straight ahead without any attempted or intended changes. The coding of this attribute is not always dependent on the roadway alignment.

**02 (Decelerating in Road)** is used when this vehicle was traveling straight ahead within the road portion of the trafficway and was decelerating.

**03 (Accelerating in Road)** is used when this vehicle was traveling straight ahead within the road portion of the trafficway and was accelerating. **03 (Accelerating in Road)** must be explicitly stated by officer.

**04 (Starting in Road)** is used when this vehicle was in the process of starting forward from a stopped position *and intending to proceed straight ahead* within the road portion of the trafficway (e.g., start up from traffic signal).

**05 (Stopped in Roadway)** is used when this vehicle was stopped momentarily, with the motor running within the roadway portion of the trafficway (e.g., stopped for traffic signal).

**06 (Passing or Overtaking Another Vehicle)** is used when this vehicle was traveling straight ahead and was in the process of passing or overtaking another vehicle on the left or right. **Note:** This attribute is not used in rear-end collisions. (See Tables - [Precrash Event Scenarios for Different Rear-End Situations](#).)

**07 (Disabled or "Parked" in Travel Lane)** is used when this vehicle was "parked" in a travel lane (e.g., double parked, disabled) with a driver present in the vehicle.

**08 (Leaving a Parking Position)** is used when this vehicle was entering the travel lane from a parking area adjacent to the traffic lanes (i.e., in the process of leaving the parking position). This attribute includes vehicles that were previously stopped/parked on the shoulder, roadside, median, etc. For vehicles backing from a driveway, use attribute [13 \(Backing Up \[Other Than for Parking Position\]\)](#).

**09 (Entering a Parking Position)** is used when this vehicle was leaving the travel lane to a parking area adjacent to the traffic lanes (i.e., in the process of parking). This attribute includes vehicles that are stopping/parking on the shoulder, roadside, median, etc. For vehicle backing into a driveway use [13 \(Backing Up \[Other Than for Parking Position\]\)](#).

**10 (Turning Right)** is used when this vehicle was moving forward and turned right, changing lanes from one roadway to a different roadway (e.g., from or to a driveway, parking lot, or intersection). Excludes situations where the vehicle was leaving a parking position.

**11 (Turning Left)** is used when this vehicle was moving forward and turned left, changing lanes from one roadway to a different roadway (e.g., from or to a driveway, parking lot, or intersection). Excludes situations where the vehicle was leaving a parking position.

**12 (Making a U-Turn)** is used when this vehicle was moving forward making a U-turn on the trafficway. Excludes situations where the vehicle was leaving a parking position.

**13 (Backing Up [Other Than for Parking Position])** is used when this vehicle was intentionally traveling backwards within the trafficway. Vehicles backing into or from a

driveway are included in this attribute. If the backward movement is unintentional (e.g., the vehicle rolls or drifts backward) do not use this attribute (see [98 \(Other \[Specify:\]\)](#)). Also, do not use this attribute if the vehicle was backing into or out of a parking space (see [09 \(Entering a Parking Position\)](#) or [08 \(Leaving a Parking Position\)](#), respectively).

**14 (Negotiating a Curve)** is used when this vehicle was continuing along a road that curved to the right or left.

**15 (Changing Lanes)** is used when this vehicle was traveling straight ahead and changed travel lanes to the right or left while on the same roadway.

**16 (Merging)** is used when this vehicle was moving forward and merging from the left or right into a traffic lane (e.g., roadway narrows, exit/entrance ramps).

**17 (Successful Avoidance Maneuver to a Previous Critical Event)** is used when this vehicle responded to a previous critical event and successfully avoided an impact. However, this maneuver precipitated a subsequent critical crash envelope, which resulted in this vehicle's first impact.

**98 (Other [Specify:])** is used when this vehicle's PRE-EVENT MOVEMENT is known but none of the specified attributes are applicable. An example would be a vehicle that unintentionally travels (e.g., rolls or drifts) backward. The movement must be specified in the "specify box."

**\*Note: For attributes with a "Specify:" designation,** a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**99 (Unknown)** is used when the vehicle's movement prior to the driver's realization of an impending critical event is unknown.

#### Consistency Checks [\(See Section 400\)](#):

**Definition:** This element identifies the category of the event that was critical to this vehicle being involved in the crash.

**Remarks:** When more than one condition applies and it cannot be determined which one had a greater effect, choose the higher listed attribute (e.g., [1 \(This Vehicle Loss of Control Due to:\)](#) takes precedence over [2 \(This Vehicle Traveling\)](#)).

If you do not know from available sources which driver had the right-of-way at a controlled or uncontrolled intersection, follow the guidelines under [Precrash General Rule #6](#).

See the [Coding Guide: Precrash Critical Event Category Flowchart](#) for helpful information.

**1 (This Vehicle Loss of Control Due to:)** is used to identify situations where the critical factor leading to the collision involved control loss of this vehicle. Control loss can be related to either mechanical failure or environmentally induced vehicle instability. (See [Precrash General Rule #5](#) for additional guidance.)

**2 (This Vehicle Traveling)** is used to identify situations where the critical factor leading to the collision involves the travel path of this vehicle.

**3 (Other Motor Vehicle in Lane)** is used to identify situations where the critical factor leading to the collision involved the travel of the other vehicle in the same lane as this vehicle.

**4 (Other Motor Vehicle Encroaching into Lane)** is used to identify situations where the critical factor leading to the collision involves the other vehicle's movement into or across this vehicle's travel lane from another lane, intersection, driveway, or ramp.

**5 (Pedestrian or Pedalcyclist or Other Non-Motorist)** is used to identify situations where the critical factor leading to the collision for this vehicle involved a pedestrian, pedalcyclist, or other non-motorist. A pedalcyclist is defined as a person riding a pedal power conveyance (bicycle, tricycle, etc.). Other non-motorists include people on personal conveyances (baby carriage, skate

board, roller blades, motorized wheelchair, etc.) and any person riding on an animal or in an animal-drawn conveyance (on horseback, in a horse-drawn carriage, etc.).

**6 (Object or Animal)** is used to identify situations where the critical factor leading to the collision for this vehicle involved an object or animal.

**7 (Other)** is used when a critical factor not previously listed resulted in the collision for this vehicle. Previous impacts in the crash are not considered as other critical precrash events.

**9 (Unknown)** is used when the critical precrash event that resulted in the collision is unknown.

**Consistency Check** [\(See Section 400\)](#):

| 91    | <a href="#">Object Approaching Road</a>   |
| 92    | <a href="#">Object Unknown Location</a>   |

### OTHER

| Code | Attribute                                                |
|------|----------------------------------------------------------|
| 98   | <a href="#">Other Critical Precrash Event (Specify:)</a> |

### UNKNOWN:

| Code | Attribute               |
|------|-------------------------|
| 99   | <a href="#">Unknown</a> |

**Definition:** This element identifies the critical event that made the crash imminent (i.e., something occurred that made the collision possible).

**Remarks:**

The selection of the [CRITICAL PRECRASH CATEGORY](#) will determine what CRITICAL PRECRASH EVENTS are available to select.

When you know the CRITICAL PRECRASH CATEGORY, but are unable to select a specific CRITICAL PRECRASH EVENT, use the following guideline:

Default to one of the “Other” or “Unknown” attributes within each CRITICAL PRECRASH EVENT CATEGORY, rather than coding the entire CRITICAL PRECRASH CATEGORY as “Other critical precrash event.” ([Precrash General Rule #3](#))

**\*Note: For attributes with a “Specify:” designation**, a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a **specific** reason for this selection.

Responsive actions to this situation, if any, are coded under [ATTEMPTED AVOIDANCE MANEUVER](#).

A CRITICAL PRECRASH EVENT is coded for each vehicle and identifies the circumstances leading to this vehicle’s first impact in the crash.

Do not refer to culpability. Many crash scenarios will suggest fault, but this should be coincidental rather than by design. As an example, vehicle 1 was speeding when vehicle 2 crossed vehicle 1’s path from a driveway. The situation that made the precrash event critical for vehicle 1 (since it did not lose control) was vehicle 2’s movement across vehicle 1’s path **and not** vehicle 1’s speed.

The mere presence of a traffic control signal/sign typically does not make the situation critical when determining CRITICAL PRECRASH EVENT. (See example under [Precrash General Rule #2](#))

When selecting events within the categories of [This Vehicle Traveling](#) and [Other Motor Vehicle Encroaching Into Lane](#) for Critical Events occurring in intersections, a vehicle’s “travel lane” extends through the intersection area even if no lane line markings are present within the intersection. For example, for a vehicle that is turning left, its original travel lane extends through the intersection to the lane into which it is turning (see [Figure 26](#) below).

*Figure 26: Diagram of a Vehicle Turning Left and its Extended Travel Lane*

A motor vehicle is stopped in a travel lane and is impacted by another motor vehicle ricocheting off a vehicle. The CRITICAL PRECRASH EVENT for the vehicle struck by the ricocheting

vehicle is in the category of either: [Other Motor Vehicle In Lane](#) or [Other Motor Vehicle Encroaching Into Lane](#). ([Precrash General Rule #9](#))

***This Vehicle Loss of Control Due to:***

**01 (Blow Out or Flat Tire)** is used when a vehicle in motion loses control as the result of an immediate tire disruption. Examples include blow out, rapid air loss, tread separation, etc.

**02 (Stalled Engine)** refers to a vehicle that is in motion and loses engine power. A stalled engine situation must precipitate a collision to be coded in this element. A vehicle that is stopped as the result of an engine malfunction does not take this attribute.

**03 (Disabling Vehicle Failure [e.g., Wheel Fell Off] [Specify:])** is selected when a mechanical malfunction, such as a component of the vehicle suspension or steering system, leads to the critical reason for the collision. (See “[Note: For attributes with “specify:” designation](#)“ at the beginning of Remarks section for this element.)

**04 (Non-Disabling Vehicle Problem [e.g., Hood Flew Up] [Specify:])** is selected when some mechanical abnormality suddenly occurred to this vehicle that leads to the critical reason for the collision. The abnormality must not be disabling damage. For bald tires, see [06 \(Traveling Too Fast for Conditions or Road Configuration\)](#). (See “[Note: For attributes with “specify:” designation](#)“ at the beginning of Remarks section for this element.)

**05 (Suddenly Encountered Poor Road Conditions [Puddle, Pothole, Ice, Etc.] [Specify:])** captures control loss due to suddenly encountered environmental conditions of the roadway and not ongoing situations. For ongoing situations, see [06 \(Traveling Too Fast for Conditions or Road Configuration\)](#). These conditions must have initiated the precrash event that resulted in the collision. (See “[Note: For attributes with “specify:” designation](#)“ at the beginning of Remarks section for this element.)

**06 (Traveling Too Fast for Conditions or Road Configuration)** identifies this vehicle’s movement and speed were not appropriate relative to its surroundings in which the subsequent loss of control led to the collision. This attribute applies when the loss of control is due to a vehicle traveling at a speed that was unsafe for the road configuration or conditions, and has no bearing on the [SPEED LIMIT](#). The officer does not necessarily have to indicate that speed was a factor in the crash, and therefore this attribute is independent of [SPEEDING RELATED](#). This attribute may also be used in situations where there are no adverse weather and/or road surface conditions.

**Examples include:**

- A roadway departure on a curve where the driver failed to negotiate and departed the roadway resulting in an impact. If the driver merely steered straight while in a curve and departed the roadway, the category This Vehicle Traveling may apply.
- The vehicle loses control (hydroplanes) on a wet roadway (can be due to bald tires).

**08 (Other Cause of Control Loss [Specify:])** is selected when it was determined that this vehicle’s loss of control was the primary reason that made the event critical and the above attributes do not adequately identify the control loss condition. If control is lost due to driver illness such as heart attacks, diabetic comas, etc., then CRITICAL EVENT - PRECRASH

(EVENT) should be coded as **08 (Other cause of control loss [specify:])**. This attribute should not be used for drivers who are impaired by alcohol and/or drugs unless the driver's [CONDITION \(IMPAIRMENT\) AT TIME OF CRASH](#) equals **01 (Ill, Blackout)**. (See "[Note: For attributes with "Specify:" designation](#)" at the beginning of Remarks section for this element.)

**09 (Unknown Cause of Control Loss)** is selected when it is known control loss made the situation critical, but it is unknown whether the vehicle or the environment caused the control loss.

### **This Vehicle Traveling**

These attributes identify situations where the critical factor leading to the collision involved the travel path of **this** vehicle.

**10 (Over the Lane Line on Left Side of Travel Lane)** is selected when this vehicle departs its lane to the left and is entering or had entered the adjoining lane, shoulder, or designated bike lane. The change of travel path by this vehicle must precipitate the critical event for the collision. As an example, this vehicle attempts to pass another vehicle on the other vehicle's left and is struck by a vehicle traveling within its travel lane in the opposite direction.

However, by modifying the scenario slightly, the lane change may not always be the factor leading to the precrash event. Consider the same situation where this vehicle is passing to the left of the lead vehicle. If an animal runs into the roadway and is struck by this vehicle, then the correct choice would be [87 \(Animal in Road\)](#).

**11 (Over the Lane Line on Right Side of Travel Lane)** is selected when this vehicle departs its lane to the right and is entering or had entered the adjoining lane, shoulder, or designated bike lane. To use this attribute, change of travel path by this vehicle must precipitate the critical event for the collision. As an example, this vehicle attempts to pass another vehicle on the other vehicle's right and is struck in the rear by a vehicle traveling within its travel lane in the same direction. The correct choice for this vehicle would be **11 (Over the Lane Line on Right Side of Travel Lane)**.

However, by modifying the scenario slightly the lane change may not always be the factor leading to the precrash event. Consider the same situation where this vehicle is passing to the right of the lead vehicle. If an animal runs into the road and is struck by this vehicle, then the correct choice would be [87 \(Animal in Road\)](#).

**12 (Off the Edge of the Road on the Left Side)** identifies a situation where the initial precrash event occurred beyond the left side shoulder area. This also includes departure into a median.

**13 (Off the Edge of the Road on the Right Side)** identifies a situation where the initial precrash event occurred beyond the right-side shoulder area.

**14 (End Departure)** is used when the vehicle departs the end of the roadway (e.g., "T" intersection).

**15 (Turning Left)** is used when this vehicle attempts a left turn to or from its roadway or driveway to another roadway or driveway.

**16 (Turning Right)** is used when this vehicle attempts a right turn to or from its roadway or driveway to another roadway or driveway.

**17 (Crossing Over (Passing Through) Junction)** identifies this vehicle's travel as proceeding through the junction without any planned turning.

**18 (This Vehicle Decelerating)** is used when the vehicle is decelerating.

**19 (Unknown Travel Direction)** is used for those occasions where this vehicle's travel made the situation critical, but it is unknown which travel direction this vehicle was moving.

**20 (Backing)** is used when this vehicle was backing in a travel lane or backing into the roadway from a driveway, shoulder, or parking lane. This attribute excludes unintentional backward movement of the vehicle such as a vehicle that rolls or drifts backward (see [98 \(Other Critical Precrash Event \[Specify:\]\)](#)).

**21 (Making a U-Turn)** is used when this vehicle attempts to make a U-Turn. When it cannot be determined if the vehicle is making a left or a U-Turn, default to left turn.

### **Other Motor Vehicle in Lane**

These attributes identify situations where the critical factor leading to the collision involved the travel of the **other** vehicle in the same lane as **this** vehicle. **Note:** For Rear-End collision situations involving three vehicles see tables [Precrash Event Scenarios for Different Rear-End Collision Situations](#).

**50 (Other Vehicle Stopped)** identifies a situation where the other vehicle is not in motion (i.e., stopped, parked, disabled) and in this vehicle's travel lane.

**51 (Traveling in Same Direction with Lower Steady Speed)** is used when the other vehicle was the lead vehicle in the same travel lane, traveling in the same direction, and was traveling slower than this vehicle.

**52 (Traveling in Same Direction While Decelerating)** is used when the other vehicle was the lead vehicle in the same travel lane, traveling in the same direction, and was decelerating. Deceleration can include intentional deceleration by braking or unintended deceleration caused by a prior event (e.g., tire blowout, prior collision).

**53 (Traveling in Same Direction with Higher Speed)** is used when the speed of the other vehicle was higher than this vehicle or accelerating. The other vehicle must be overtaking this vehicle.

**54 (Traveling in Opposite Direction)** is used when the other vehicle was in this vehicle's travel lane and traveling head-on in the opposite direction of this vehicle.

**55 (In Crossover)** is used when the other vehicle enters a crossover already occupied by this vehicle. A crossover is defined as a designated opening within a median used primarily for "U-turns."

**56 (Backing)** identifies a situation where the other vehicle was in the process of backing up while in this vehicle's travel lane. This attribute also includes unintentional backward movement of the other vehicle. For example, a vehicle that rolls or drifts backward in this vehicle's lane.

**59 (Unknown Travel Direction/Speed of Other Motor Vehicle in Lane)** is used for situations where the other vehicle's activity (while in the same lane as this vehicle) precipitated the precrash event, but the travel direction and/or speed could not be determined.

### **Other Motor Vehicle Encroaching into Lane**

These attributes identify situations where the critical factor leading to the collision involved the **other** vehicle's movement into or across **this** vehicle's travel lane from another lane, intersection, driveway, or ramp.

When two vehicles are initially traveling on the same trafficway and one executes a left turn with the right-of-way (i.e., green arrow), use **Other Motor Vehicle Encroaching Into Lane - From opposite direction-over right lane line** for the turning vehicle's critical event. This applies to CRASH TYPES 68, 69.

If the vehicles were initially on different trafficways (CRASH TYPES 76, 77 and 82, 83) the critical event for the vehicle turning left with the right-of-way should be **Other Motor Vehicle Encroaching - From crossing street across path**. (Precrash General Rule #7.)

**60 (From Adjacent Lane (Same Direction) Over Left Lane Line)** is used when the other vehicle was traveling in the same direction as this vehicle and crosses the left lane line with respect to this vehicle's travel lane (i.e., other vehicle crosses its right lane line).

**61 (From Adjacent Lane (Same Direction) Over Right Lane Line)** is used when the other vehicle was traveling in the same direction as this vehicle and crosses the right lane line with respect to this vehicle's travel lane (i.e., other vehicle crosses its left lane line).

**62 (From Opposite Direction Over Left Lane Line)** identifies a situation where the other vehicle crosses the left lane line while traveling in the opposite direction from this vehicle.

**63 (From Opposite Direction Over Right Lane Line)** identifies a situation where the other vehicle crosses the right lane line while traveling in the opposite direction from this vehicle.

**64 (From Parking Lane/Shoulder, Median/Crossover, Roadside)** is selected when the other vehicle's *Critical Precrash envelope began when* departing one of these trafficway components and entering the travel lane of this vehicle. ***This attribute is not to be used for vehicles that cross the median or are re-entering the roadway after a departure.***

**65 (From Crossing Street, Turning into Same Direction)** is used when the other vehicle was turning from another roadway onto this vehicle's roadway and attempted to travel in the same direction as this vehicle.

**66 (From Crossing Street, Across Path)** is used when the other vehicle was continuing straight through the intersection and attempted to cross over this vehicle's roadway.

**67 (From Crossing Street, Turning into Opposite Direction)** is used when the other vehicle was entering an intersection from another roadway and was turning or attempting to turn onto this vehicle's roadway in the opposite travel direction of this vehicle.

**68 (From Crossing Street, Intended Path Not Known)** is used when the other vehicle's entrance into the intersection was the critical factor that led to the collision; however, the other vehicle's travel direction could not be determined.

**70 (From Driveway, Turning into Same Direction)** is used when the other vehicle was turning from a driveway onto this vehicle's roadway and attempted to travel in the same direction as this vehicle.

**71 (From Driveway, Across Path)** is used when the other vehicle was entering this vehicle's roadway from a driveway and was continuing straight across to another driveway or roadway.

**72 (From Driveway, Turning into Opposite Direction)** is used when the other vehicle was entering this vehicle's roadway from a driveway and was attempting to turn into the opposite travel direction of this vehicle.

**73 (From Driveway, Intended Path Not Known)** is used to identify driveway-related precrash events where details surrounding the other vehicle's intended path are not known.

**74 (From Entrance to Limited Access Highway)** is used for entrance ramp situations where the other vehicle was attempting to enter (merge) onto the limited access highway that was being traveled by this vehicle.

**78 (Encroachment by Other Vehicle Details Unknown)** is used for situations where the other vehicle initiated the critical precrash event, but circumstances surrounding the other vehicle's encroachment are unknown.

### **Pedestrian or Pedalcyclist or Other Non-Motorist**

These attributes identify situations where the critical factor leading to the collision for this vehicle involved a pedestrian, pedalcyclist, or other non-motorist. These selections include situations where a vehicle was exiting a driveway. A pedalcyclist is defined as a person riding a pedal powered conveyance (bicycle, tricycle, etc.). Other non-motorists include people on personal conveyances (baby carriage, skateboard, rollerblades, motorized wheelchair, etc.) and any person riding on an animal or in an animal-drawn conveyance (on horseback, in a horse-drawn carriage, etc.).

**80 (Pedestrian in Road)** is used when a pedestrian was present (sitting, standing, walking, or running, etc.) in the road ***and in the travel path of this vehicle during this vehicle's critical precrash envelope***. For people not on foot (e.g., person on a skateboard or in a motorized wheelchair), use **83 (Pedalcyclist or Other Non-Motorist in Road)**.

#### ***Examples:***

- ***The driver does not see the pedestrian in the road in the vehicle's travel path ahead and strikes the pedestrian in the road.***
- ***The driver sees the pedestrian in the road in the vehicle's travel path ahead, swerves to avoid the pedestrian, drives off the road, and hits a mailbox.***

**81 (Pedestrian Approaching Road)** identifies situations where a pedestrian was within the trafficway and moving toward the road or attempting to enter the road but was not on the road ***during this vehicle's critical precrash envelope***.

#### ***Example:***

- The driver sees the pedestrian approaching the road, swerves to avoid the pedestrian, drives off the road, and hits a mailbox.

**82 (Pedestrian Unknown Location)** is used when it was determined the presence or action of a pedestrian was the critical factor that led to this vehicle's collision, but the location or action of the pedestrian was not known.

***Example:***

- It is known that the presence of a Pedestrian was the event that made the situation critical for this vehicle; however, whether the Pedestrian was approaching the road or already in the road and in the travel path of the vehicle is not known.

**83 (Pedalcyclist or Other Non-Motorist in Road)** is selected when a pedalcyclist or other non-motorist was present in the road (irrespective of relative motion) ***and in the travel path of this vehicle during this vehicle's critical precrash envelope***. Other non-motorists include people on personal conveyances (baby carriage, skate board, roller blades, motorized wheelchair, etc.) and any person riding on an animal or in an animal-drawn conveyance (on horseback, in a horse-drawn carriage, etc.).

***Examples:***

- ***The driver does not see the pedalcyclist in the road in the vehicle's travel path ahead and strikes the pedalcyclist in the road.***
- ***The driver sees the pedalcyclist in the road in the vehicle's travel path ahead, swerves to avoid the pedalcyclist, drives off the road, and hits a mailbox.***

**84 (Pedalcyclist or Other Non-Motorist Approaching Road)** identifies situations where the pedalcyclist or other non-motorist was within the trafficway and moving toward the road or attempting to enter the road but was not on the road ***during this vehicle's critical precrash envelope***.

***Example:***

- ***The driver sees the pedalcyclist approaching the road, swerves to avoid the pedalcyclist, drives off the road, and hits a mailbox.***

**85 (Pedalcyclist or Other Non-Motorist Unknown Location)** is used when it was determined the presence or action of a pedalcyclist or other non-motorist was the critical factor that led to this vehicle's collision, but the action of the pedalcyclist or other non-motorist was not known.

***Example:***

- ***It is known that the presence of a Pedalcyclist or Other Non-Motorist was the event that made the situation critical for this vehicle; however, whether the Pedalcyclist or Other Non-Motorist was approaching the road or already in the road and in the travel path of the vehicle is not known.***

## Object or Animal

These attributes identify situations where the critical factor leading to the collision for this vehicle involved a **non-fixed** object or animal.

**87 (Animal in Road)** is used when an animal was present (i.e., stationary or moving) in the road **and in the travel path of this vehicle during this vehicle's critical precrash envelope**.

### *Examples:*

- *The driver does not see the animal in the road in the vehicle's travel path ahead and strikes the animal in the road.*
- *The driver sees the animal in the road in the vehicle's travel path ahead, swerves to avoid the animal, drives off the road, and hits a mailbox.*

**88 (Animal Approaching Road)** identifies situations where an animal was within the trafficway and moving toward the road or attempting to enter the road, but not on the road **during this vehicle's critical precrash envelope**.

### *Example:*

- *The driver sees the animal approaching the road, swerves to avoid the animal, drives off the road, and hits a mailbox.*

**89 (Animal - Unknown Location)** is used when it was determined the presence or action of an animal was the critical factor that led to this vehicle's collision, but the action of the animal was not known.

### *Example:*

- *It is known that the presence of an animal was the event that made the situation critical for this vehicle; however, whether the animal was approaching the road or already in the road and in the travel path of the vehicle is not known.*

**90 (Object in Road)** is used when a **non-fixed** object (e.g., **garbage can, train, ball**) was present in the road **and in the travel path of this vehicle during this vehicle's critical precrash envelope**. An object is defined as being either fixed or non-fixed (only non-fixed objects are captured in this attribute). "Fixed" objects (trees, poles, fire hydrants, etc.) cannot be in the roadway. ([Precrash General Rule #8](#))

### *Examples:*

- *The driver does not see the garbage can in the vehicle's travel path ahead and strikes the garbage can in the road.*
- *The driver sees the garbage can in the vehicle's travel path ahead, swerves to avoid the garbage can, drives off the road, and hits a mailbox.*
- *The driver does not see the train in the travel path ahead and strikes the train in the crossing.*
- *The driver sees the train in the travel path ahead, swerves to avoid the train, drives off the road, and hits the train outside the trafficway.*

- *The driver sees the train in the travel path ahead, swerves to avoid the train, and strikes a railroad crossing device.*

**91 (Object Approaching Road)** identifies situations where a *non-fixed* object (*e.g., garbage can, train, ball*) was within the trafficway and moving toward the road, but not on the road *during this vehicle's critical precrash envelope*.

*Example:*

- *The driver sees the garbage can rolling toward (approaching) the vehicle's travel path ahead, swerves to avoid the garbage can, drives off the road, and hits a mailbox.*
- *The driver sees the train approaching the travel path ahead, swerves to avoid the train, drives off the road, and hits the train outside the trafficway.*
- *The driver sees the train approaching the travel path ahead, swerves to avoid the train, and strikes a railroad crossing device.*

**92 (Object Unknown Location)** is selected when it was determined the presence or movement of an object was the critical factor that led to this vehicle's collision, but details surrounding the location of the object were not known.

*Example:*

- *It is known that the presence of a garbage can, train, or ball was the event that made the situation critical for this vehicle; however, whether the object was approaching the road or already in the road and in the travel path of the vehicle is not known.*

If there are doubts, unclear, *or unusual* circumstances, see [98 \(Other Critical Precrash Event \[specify:\]\).](#) For example, *an abandoned, driverless motor vehicle in transport was on the roadway in the train crossing when it was struck by a train.*

### Other

This attribute identifies situations where the critical factor leading to the collision for this vehicle was not previously listed.

**98 (Other Critical Precrash Event [Specify:])** is used when a critical factor not previously listed resulted in the collision for this vehicle. Previous impacts in the crash are not considered as "other critical precrash events."

**Examples include:**

- The first harmful event for this vehicle is a [non-collision harmful event](#).
- The vehicle is a driverless motor vehicle in-transport.
- A MVIT that becomes a contact vehicle by being struck by a "load" from another MVIT.
- The vehicle was disabled in a previous crash.
- An in-transport vehicle strikes or is struck by the door of a parked motor vehicle that is opened into the travel lane or some portion of the equipment of the parked motor

vehicle (excluding the primary outline); e.g., extended mirrors used when hauling a camper or trailer. **NOTE:** This should not be used for **loads** of vehicles extending into the travel lane, e.g., attached trailers or oversized cargo. In these cases, the vehicle is **in-transport** and not parked.

- Unintentional Rolling Backward.
- Height Clearance.
- Mechanical problem with no control loss (stopped in the roadway with a stalled engine or broken axle, etc.).
- Vehicle stuck or stranded on the track and is struck by a train.
- This Vehicle is backing into a driveway/parking stall.

(See “[Note: For attributes with “Specify:” designation](#)“ at the beginning of Remarks section for this element.)

### **Unknown:**

**99 (Unknown)** is used when the critical precrash event that resulted in the collision is not known.

### **Consistency Checks [\(See Section 400\)](#):**

| 99    | <a href="#">Unknown/Not Reported</a>                        |

**Definition:** This element identifies movements/actions taken by the driver, within a critical crash envelope, in response to a [CRITICAL PRECRASH EVENT](#).

**Remarks:** Attempted avoidance maneuvers are movements/actions taken by the driver, within a critical crash envelope, in response to a Critical Precrash Event. See [Precrash Data Overview](#) for an expanded discussion on precrash definitions. Attempted avoidance maneuvers occur **after** the driver has realization of an impending danger. This element assesses what the driver's action(s) was in response to his/her realization. ***Use the available crash report fields, narrative, and diagram to code the actions taken by the driver in response to the driver's realization of an impending danger (Critical Event) and within the appropriate Critical Crash Envelope (CCE).***

***Currently there are no State crash reports having fields, which by themselves, can be applied to code this element. Some State crash reports do have fields containing relevant information to consider such as Driver Contributing Circumstances, Vehicle Maneuver, Roadway Factors, Avoidance Maneuvers, or Environmental Circumstances. However, the data in these fields will rarely provide all the information needed to code ATTEMPTED AVOIDANCE MANEUVER.***

First determine the [CRITICAL PRECRASH EVENT](#) (for the appropriate Critical Crash Envelope) and select the attribute which best describes the actions taken by the driver in response to that CRITICAL PRECRASH EVENT. Most crashes have only one critical crash envelope and thus only one CRITICAL PRECRASH EVENT; however, multiple critical crash envelopes with their respective Critical Precrash Events, can exist. In the case of multiple critical precrash envelopes, select the attribute which best describes the actions taken by the driver in response to the CRITICAL PRECRASH EVENT, within the appropriate critical crash envelope that occurred just prior to this vehicle's first harmful event.

This element may be used independently: (1) of any maneuvers associated with this driver's Crash Type, and (2) this vehicle's first associated crash event.

When there was a known action (e.g., braking), but you cannot determine whether there was more than one action (e.g., braking and steering left), default to the known action (e.g., braking).

### ***Witness Statements:***

See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

**00 (No Driver Present/Unknown if Driver Present)** is pre-coded for in-transport motor vehicles when the element [DRIVER PRESENCE](#) is coded as [0 \(No Driver Present/Not Applicable\)](#).

**01 (No Avoidance Maneuver)** is selected whenever the driver did not attempt any evasive (pre-impact) maneuvers, i.e., the case material indicate that there was no realization of danger or realization without time/ability to react or there is some indication on a field or within the narrative statements (supported by the diagram if present) that identifies no avoidance maneuver was attempted. **Note: This attribute should not be assessed solely by the diagram.**

***Lack of definitive avoidance information in the report (absence of information) should not be coded as 01 (No Avoidance Maneuver). See [99 \(Unknown/Not Reported\)](#) for absence of information situations.***

***Examples of when 01 (No Avoidance Maneuver) CAN be coded:***

- ***The driver cannot attempt an avoidance maneuver in response to his/her realization of an impending danger because the vehicle is “stopped in traffic” during the entire applicable CCE.***
- ***The case material indicate the driver did not attempt an avoidance maneuver after realization of an impending danger and within the appropriate critical crash envelope because:***
  - ***The driver did not have time to react.***
  - ***The driver was asleep or unconscious.***
  - ***The driver did not see or recognize there was anything to avoid.***

**16 (Braking)** is used when there is indication that the brakes were applied.

**98 (Other Actions, [Specify:])** is used when the police crash report indicates the driver took certain avoidance actions, but none of the specified attributes apply. This value also applies when there are reported movements/actions taken by the driver with no information provided about the

driver's specific actions. (e.g., "The driver of Vehicle 2 attempted to avoid the collision but was unsuccessful").

**\*Note: For attributes with a "Specify:" designation**, a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**99 (Unknown/Not Reported)** is used when:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material); or
2. a field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material); or
3. police indicate unknown.

**Note:** If a State's crash report manual instructs to leave data blocks blank when there is no avoidance maneuver, then a blank in those data blocks are NOT considered **99 (Unknown/Not Reported)**.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                   | <b>THEN</b>                                                                                                                                      |

## PC21 - Pre-Impact Stability

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.PCRASH4

**ELEMENT VALUES:**

| Codes | Attributes                                                            |
|-------|-----------------------------------------------------------------------|
| 0     | <a href="#">No Driver Present/Unknown if Driver Present</a>           |
| 1     | <a href="#">Tracking</a>                                              |
| 2     | <a href="#">Skidding Longitudinally Rotation Less Than 30 Degrees</a> |
| 3     | <a href="#">Skidding Laterally Clockwise Rotation</a>                 |
| 4     | <a href="#">Skidding Laterally Counter-Clockwise Rotation</a>         |
| 5     | <a href="#">Skidding Laterally, Rotation Direction Unknown</a>        |
| 7     | <a href="#">Other Vehicle Loss-of-Control (Specify:)</a>              |
| 9     | <a href="#">Precrash Stability Unknown</a>                            |

**Definition:** This element assesses the stability of the vehicle **after** the critical event, but **before** the impact.

**Remarks:** The stability of the vehicle **prior** to an avoidance action is **not** considered except in the following situation:

A vehicle that is out of control (e.g., yawing clockwise) prior to an avoidance maneuver is coded as [7 \(Other Vehicle Loss-of-Control \[Specify:\]\)](#) only if an avoidance action was taken in response to an impending danger.

Thus, this element focuses upon this vehicle's dynamics **after the** [CRITICAL PRECRASH EVENT](#).

**0 (No Driver Present/Unknown if Driver Present)** is pre-coded for in-transport motor vehicles when the element [DRIVER PRESENCE](#) is coded as **0 (No Driver Present/Not Applicable)**.

**1 (Tracking)** is used when there is no brake lockup and the vehicle continued along its intended path without rotation. Stopped, slowing, turning, or accelerating to avoid a rear-end collision are examples. Only if the case material include enough detail to determine all of the items from [Precrash General Rule #10](#), code **1 (Tracking)** can be applied.

Even when the officer does not specifically mention "skidding" or "braking," narrative statements such as "the vehicle began to rotate," "the back end slid out," "the vehicle was sliding," etc., are valid for selecting attributes 2-5.

**2 (Skidding Longitudinally Rotation Less Than 30 degrees)** is selected when there is brake lockup or whenever tire marks are apparent without brake lockup (braking or non-braking) and rotation is less than 30 degrees clockwise or counterclockwise. If there is no information to support rotation greater than or equal to 30 degrees, then use this attribute. Also use this attribute when there is indication in the case material that the vehicle was not tracking (e.g., sliding) but tire marks are not present, (wet, ice, snow covered, etc.).

**3 (Skidding Laterally Clockwise Rotation)** is selected when the vehicle rotates clockwise, relative to the driver's seating position. The vehicle must rotate 30 degrees or more. This attribute also applies when the driver attempts a steering input (e.g., steers right), but the vehicle rotates clockwise.

**4 (Skidding Laterally Counter-Clockwise Rotation)** is selected when the vehicle rotates counterclockwise, relative to the driver's seating position. The vehicle must rotate 30 degrees or more. This attribute also applies when the driver attempts a steering input (e.g., swerves left), but the vehicle rotates counterclockwise.

**5 (Skidding Laterally, Rotation Direction Unknown)** is used when the vehicle rotates 30 degrees or more, but it cannot be determined from the case material whether it was clockwise or counterclockwise rotation.

**7 (Other Vehicle Loss-of-Control [Specify:])** is selected when a driver loses control of a vehicle prior to the critical event.

**\*Note: For attributes with a "Specify:" designation,** a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**9 (Precrash Stability Unknown)** is selected when the stability of the vehicle cannot be determined. If the case material does not provide enough information (e.g., in the diagram, narrative, etc.) to determine precrash stability, code **9 (Precrash Stability Unknown)**.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                      | <b>THEN</b>                                                                |

| 7     | <a href="#">Entered Roadway</a>                                           |
| 9     | <a href="#">Unknown</a>                                                   |

**Definition:** This element assesses the location of the vehicle after the critical event, and immediately before the First Harmful Event for this vehicle.

**Remarks:** When determining Pre-Impact Location for crashes occurring in intersections, a vehicle's "travel lane" extends through the intersection area even if no lane line markings are present within the intersection. Additionally, for a vehicle that is turning, its original travel lane extends through the junction to the lane or driveway access into which it is turning.

Select the attribute that best describes the location of the vehicle (i.e., perimeter of the vehicle from the case diagram).

**0 (No Driver Present/Unknown if Driver Present)** is used when there is no driver in this vehicle.

**1 (Stayed in Original Travel Lane)** is selected when the vehicle remained within the boundaries of its initial travel lane.

**2 (Stayed on Roadway but Left Original Travel Lane)** is selected when the perimeter of the vehicle departed its initial travel lane; however, the vehicle remained within the boundaries of the roadway (travel lanes).

**3 (Stayed on Roadway, Not Known if Left Original Travel Lane)** is selected when it cannot be ascertained whether the vehicle remained within its initial travel lane. To use this attribute, the vehicle must have remained within the boundaries of the roadway.

**4 (Departed Roadway)** is selected when the vehicle departed the roadway as a result of a precrash motion. The roadway departure must not be related to the post-impact trajectory of a crash within the roadway. Use this attribute for vehicles crossing a median into oncoming traffic.

This attribute is selected when any part of the vehicle departed the roadway edge. (See the coding of Pre-Impact Location in [Example 9](#) under the [Precrash Data Overview Examples](#).)

**5 (Remained off Roadway)** the precrash motion occurred outside the boundaries of the roadway. This includes traveling on the shoulders, within the median, on the roadside, or off the trafficway.

**6 (Returned to Roadway)** is selected when the vehicle was on the roadway, went off the roadway and then returned to the same roadway during precrash motion.

**7 (Entered Roadway)** is selected when the vehicle was not previously on the roadway and then the vehicle enters the roadway during precrash motion.

**9 (Unknown)** the precrash motion of the vehicle cannot be determined.

**Consistency Checks** ([See Section 400](#)):

## PC23 - Crash Type

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.ACC\_TYPE

**ELEMENT VALUES:**

**As assigned by the selection on the next screens**

| Codes | Attributes                       |
|-------|----------------------------------|
| 00    | <a href="#">No Impact</a>        |
| 01-93 | Crash Types                      |
| 98    | <a href="#">Other Crash Type</a> |
| 99    | <a href="#">Unknown</a>          |

**Definition:** This element describes the type of crash this in-transport vehicle was involved in based on the [FIRST HARMFUL EVENT](#) and the precrash circumstances.

**Remarks:** The CRASH TYPE is a numeric value assigned by selecting the **Crash Category** and the **Crash Configuration** on the next screens/pages. The number can be directly entered or edited here; however, the two-step process of selecting the Crash Category and Crash Configuration is preferred to visualize the crash scenario.

The FIRST HARMFUL EVENT may include a collision between a vehicle and some object, accompanied by property damage or human injury. The object may be another vehicle, a person, an animal, a fixed object, the road surface, or the ground. If the first collision is a rollover, the impact is with the ground or road surface. The collision may also involve plowing into soft ground, if severe vehicle deceleration results in damage or injury. A road departure without damage or injury is **not** defined as a harmful event.

Please see [The following crash types require clarification](#) for guidance on a few specific crash types.

**Crash Type Table**

| Category                                  | Configuration                 | CRASH TYPES (includes intent)                                                                                                        |                                                                                                                                          |                                                                                                                                |                                                                                                                       |                                                                    |

## **Category I. Single Driver**

### **Configuration A. Right Roadside Departure**

The vehicle departed the right side of the road with the first harmful event occurring off the road.

#### **01 (Right Roadside Departure: Drive Off Road)**

Use **Right Roadside Departure: Drive Off Road** when the vehicle departed the road under a controlled situation (the driver was distracted, fell asleep, intentionally departed, etc.).

#### **02 (Right Roadside Departure: Control/Traction Loss)**

Use **Right Roadside Departure: Control/Traction** when there is evidence that the vehicle lost traction or “got away” from the driver in some other way (e.g., the vehicle spun off the road as a result of surface conditions, oversteer phenomena, or mechanical malfunctions). If doubt exists, use [01 \(Right Roadside Departure, Drive Off Road\)](#). If the control/traction loss occurs as a result of an avoidance of something in the road, see remarks for CRASH TYPE [03 \(Right Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal\)](#) and [04 \(Right Roadside Departure: Specifics Other\)](#) to establish which attribute applies.

#### **03 (Right Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal)**

Use **Right Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal** when the vehicle departed the road to avoid something on the road. Phantom vehicle situations, pedestrians, bicyclists, and other cyclists and non-motorists are included here.

#### 04 (*Right Roadside Departure: Specifics Other*)

Use **Right Roadside Departure: Specifics Other** if the vehicle departed the road to avoid something on the road other than a vehicle, pedestrian, or animal. Also use “Specifics Other” for crashes involving a driverless in-transport vehicle.

#### 05 (*Right Roadside Departure: Specifics Unknown*)

Use **Right Roadside Departure: Specifics Unknown** if the vehicle departed the right side of the road for unknown reasons.

#### Configuration B. Left Roadside Departure

##### 06 (*Left Roadside Departure: Drive Off Road*)

Use **Left Roadside Departure: Drive Off Road** when the vehicle departed the road under a controlled situation (the driver was distracted, fell asleep, intentionally departed, etc.).

##### 07 (*Left Roadside Departure: Control/Traction Loss*)

Use **Left Roadside Departure: Control/Traction Loss** if there is evidence that the vehicle lost traction or “got away” from the driver in some other way (e.g., the vehicle spun off the road as a result of surface conditions, oversteer phenomena, or mechanical malfunctions.) If doubt exists, use [06 \(Left Roadside Departure: Drive Off Road\)](#). If the control/traction loss occurs as a result of an avoidance of something in the road, see remarks for CRASH TYPE [08 \(Left Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal\)](#) and [09 \(Left Roadside Departure: Specifics Other\)](#) to establish which attribute applies.

### **08 (Left Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal)**

Use **Left Roadside Departure: Avoid Collision with Vehicle, Pedestrian, Animal** when the vehicle departed the road to avoid something on the road. Phantom vehicle situations, pedestrians, bicyclists, and other cyclists and non-motorists are included here.

### **09 (Left Roadside Departure: Specifics Other)**

Use **Left Roadside Departure: Specifics Other** if the vehicle departed the road to avoid something on the road other than a vehicle, pedestrian, or animal. Also, use “Specifics Other” for crashes involving a driverless in-transport vehicle.

### **10 (Left Roadside Departure: Specifics Unknown)**

Use **Left Roadside Departure: Specifics Unknown** if the vehicle departed the left side of the road for unknown reasons.

### **Configuration C. Forward Impact**

The vehicle struck an object on the road or off the end of a trafficway while moving forward. Vehicle plane of contact is NOT a consideration.

### **11 (Forward Impact: Parked Vehicle)**

Use **Forward Impact: Parked Vehicle** if the crash involves an impact with a parked vehicle anywhere on the road while moving forward. Vehicle plane of contact is NOT a consideration. For cases involving a parked vehicle opening a door into moving traffic or extended mirrors into the travel lane use [15 \(Forward Impact: Specifics Other\)](#).

### 12 (*Forward Impact: Stationary Object*)

Use **Forward Impact: Stationary Object** if the crash involves an impact with a stationary object anywhere on the road while moving forward. Vehicle plane of contact is NOT a consideration. Use this attribute for cases involving a vehicle that strikes a working motor vehicle that is stationary on the road. For vehicles striking moving working motor vehicles actively performing their task, see [15 \(Forward Impact: Specifics Other\)](#).

### 13 (*Forward Impact: Pedestrian/Animal*)

Use **Forward Impact: Pedestrian/Animal** if the first harmful event involves an impact with a pedestrian or animal anywhere on the road while moving forward. Pedestrians, bicyclists, and other cyclists and non-motorists are included here. Vehicle plane of contact is NOT a consideration. However, if a vehicle is backing up when it contacts a non-motorist select [CRASH TYPE 92 \(Backing, Etc.: Backing Vehicle\)](#).

### 14 (*Forward Impact: End Departure*)

Use **Forward Impact: End Departure** when the vehicle ran off the end of the road and crashed into something while moving forward. Vehicle plane of contact is NOT a consideration.

### 15 (*Forward Impact: Specifics Other*)

Use **Forward Impact: Specifics Other** for impacted (striking or struck) trains and non-stationary objects anywhere on the road while moving forward. Vehicle plane of contact is NOT a consideration. Also use "Specifics Other" for crashes involving a driverless in-transport vehicle or for vehicles striking working motor vehicles such as snow plows, street sweepers, etc. in the act of performing their task (for vehicles striking stationary working motor vehicles in the road, see [12 \(Forward Impact: Stationary Object\)](#)). Use this attribute for cases involving a parked

vehicle opening a door into moving traffic, extended mirrors into the travel lane, or an object hanging over the road.

### **16 (Forward Impact: Specifics Unknown)**

Use **Forward Impact: Specifics Unknown** when the case material indicate a single driver was involved in a forward impact collision, but no further classification is possible. Vehicle plane of contact is NOT a consideration.

## **Category II. Same Trafficway, Same Direction**

### **Configuration D. Rear-End**

The front of the overtaking vehicle impacted the rear of the other vehicle. Note, even if the rear-impacted vehicle had started to make a turn, code here (not in Category IV - Change in Trafficway, Vehicle Turning).

### **20 (Rear-End: Stopped)**

Use **Rear-End: Stopped** for a vehicle that impacts another vehicle from the rear when the impacted vehicle was stopped in the trafficway.

### **21 (Rear-End: Stopped, Straight)**

Use **Rear-End: Stopped, Straight** for a rear-impacted vehicle that was stopped in the trafficway and was intending to proceed straight ahead.

### **22 (Rear-End: Stopped, Left)**

Use **Rear-End: Stopped, Left** for a rear-impacted vehicle that was stopped in the trafficway, intending to make a left turn.

### **23 (Rear-End: Stopped, Right)**

Use **Rear-End: Stopped, Right** for a rear-impacted vehicle that was stopped in the trafficway, intending to make a right turn.

#### **24 (Rear-End: Slower)**

Use **Rear-End: Slower** for a vehicle that impacts another vehicle from the rear when the impacted vehicle was going slower than the striking vehicle.

#### **25 (Rear-End: Slower, Going Straight)**

Use **Rear-End: Slower, Going Straight** for a rear-impacted vehicle that was going slower than the other vehicle while proceeding straight ahead.

#### **26 (Rear-End: Slower, Going Left)**

Use **Rear-End: Slower, Going Left** for a rear-impacted vehicle that was going slower than the other vehicle while intending to turn left.

#### **27 (Rear-End: Slower, Going Right)**

Use **Rear-End: Slower, Going Right** for a rear-impacted vehicle that was going slower than the other vehicle while intending to turn right.

#### **28 (Rear-End: Decelerating (Slowing))**

Use **Rear-End: Decelerating (Slowing)** for a vehicle that impacts another vehicle from the rear when the impacted vehicle was slowing down.

#### **29 (Rear-End: Decelerating (Slowing), Going Straight)**

Use **Rear-End: Decelerating (Slowing), Going Straight** for a rear-impacted vehicle that was slowing down while proceeding straight ahead.

#### **30 (Rear-End: Decelerating (Slowing), Going Left)**

Use **Rear-End: Decelerating (Slowing), Going Left** for a rear-impacted vehicle that was slowing down while intending to turn left.

#### **31 (Rear-End: Decelerating (Slowing), Going Right)**

Use **Rear-End: Decelerating (Slowing), Going Right** for a rear-impacted vehicle that was slowing down while intending to turn right.

### 32 (*Rear-End: Specifics Other*)

EACH: **32**  
SPECIFICS  
OTHER

Use **Rear-End: Specifics Other** for rear-end collisions that cannot be described in “20-31.” Enter “Specifics Other” for crashes involving a driverless in-transport vehicle.

### 33 (*Rear-End: Specifics Unknown*)

EACH: **33**  
SPECIFICS  
UNKNOWN

Use **Rear-End: Specifics Unknown** when the case material indicate a rear-end collision occurred, but no further classification is possible.

### Configuration E. Forward Impact

The front of the overtaking vehicle impacted the rear of the other vehicle, following a steering maneuver around a noninvolved vehicle or object.

### 34 (*Forward Impact: Control/Traction Loss*)

Use **Forward Impact: Control/Traction Loss** for a collision in which a vehicle’s frontal area impacts another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-involved vehicle) while both are traveling on the same trafficway in the same direction.

### 35 (*Forward Impact: Control/Traction Loss*)

Use **Forward Impact: Control/Traction Loss** for a vehicle that is impacted by the frontal area of another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-involved vehicle) while both are traveling on the same trafficway in the same direction.

### **36 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a collision in which a vehicle's frontal area impacts another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-fixed object (e.g., garbage can, person, animal, etc.) in the Road) while both are traveling on the same trafficway in the same direction.

### **37 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a vehicle that is impacted by the frontal area of another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-fixed object (garbage can, person, animal, etc.) in the Road) while both are traveling on the same trafficway in the same direction.

### **38 (Forward Impact: Avoid Collision with Vehicle)**

Use **Forward Impact: Avoid Collision with Vehicle** for a vehicle that struck the rear of another vehicle with its front plane while maneuvering to avoid collision with a non-involved vehicle, when loss of control or traction was not a factor, and both were traveling on the same trafficway, in the same direction.

### **39 (Forward Impact: Avoid Collision with Vehicle)**

Use **Forward Impact: Avoid Collision with Vehicle** for a vehicle that was impacted by the frontal area of another vehicle that was maneuvering to avoid a collision with a non-involved vehicle, when loss of control or traction was not a factor, and both were traveling on the same trafficway, in the same direction.

### **40 (Forward Impact: Avoid Collision with Object)**

Use **Forward Impact: Avoid Collision with Object** for a vehicle that struck the rear of another vehicle with its front plane while maneuvering to avoid a collision with a non-fixed object (garbage can, person, animal, etc.) in the road, when loss of control or traction was not a factor, and both were traveling on the same trafficway, in the same direction.

#### **41 (Forward Impact: Avoid Collision with Object)**

Use **Forward Impact: Avoid Collision with Object** for a vehicle that was impacted by the frontal area of another vehicle that was maneuvering to avoid a collision with a non-fixed object (garbage can, person, animal, etc.) in the road, when loss of control or traction was not a factor, and both were traveling on the same trafficway, in the same direction.

#### **42 (Forward Impact: Specifics Other)**

|                                                     |
|-----------------------------------------------------|
| <b>EACH: 42</b><br><b>SPECIFICS</b><br><b>OTHER</b> |
|-----------------------------------------------------|

Use **Forward Impact: Specifics Other** (for both vehicles) for a forward impact collision that occurred while both vehicles were traveling on the same trafficway, in the same direction, and the striking vehicle was attempting to avoid a vehicle or an object that cannot be described by “34 - 40.”

Also, use this code for crashes involving a driverless in-transport vehicle that would otherwise qualify for this configuration.

#### **43 (Forward Impact: Specifics Unknown)**

|                                                       |
|-------------------------------------------------------|
| <b>EACH: 43</b><br><b>SPECIFICS</b><br><b>UNKNOWN</b> |
|-------------------------------------------------------|

Use **Forward Impact: Specifics Unknown** when the case material indicate that a forward impact collision occurred while both vehicles were traveling on the same trafficway and in the same direction, but no further classification was possible.

### **Configuration F. Sideswipe/Angle**

The two vehicles are involved in an impact involving the side of one or both vehicles.

The following four attributes, **Sideswipe/Angle**, **Straight Ahead On Left**, **Sideswipe/Angle**, **Straight Ahead On Left/Right**, **Sideswipe/Angle**, **Changing Lanes To The Right** and **Sideswipe/Angle**, **Changing Lanes To The Left** identify relative vehicle positions (left versus right) and lane of travel intentions (straight ahead versus changing lanes). From these four codes, four combinations are permitted. They are:

1. **44 (Sideswipe/Angle, Straight Ahead On Left)** and **45 (Sideswipe/Angle, Straight Ahead On Left/Right)**.
2. **46 (Sideswipe/Angle, Changing Lanes To The Right)** and **45 (Sideswipe/Angle, Straight Ahead On Left/Right)**.
3. **45 (Sideswipe/Angle, Straight Ahead On Left/Right)** and **47 (Sideswipe/Angle, Changing Lanes To The Left)**.

4. **46 (Sideswipe/Angle, Changing Lanes To The Right)** and **47 (Sideswipe/Angle, Changing Lanes To The Left)**.

When used in combination, these codes refer to a sideswipe or angle collision that involved a vehicle to the left of a vehicle to the right where:

1. neither vehicle (**Sideswipe/Angle, Straight Ahead On Left** and **Sideswipe/Angle, Straight Ahead On Left/Right**) intended to change its lane;
2. the vehicle on the left (**Sideswipe/Angle, Changing Lanes To The Right**) was changing lanes to the right, and the vehicle on the right (**Sideswipe/Angle, Straight Ahead On Left/Right**) was not intending to change its lane;
3. the vehicle on the left (**Sideswipe/Angle, Straight Ahead On Left/Right**) was not intending to change its lane, and the vehicle on the right (**Sideswipe/Angle, Changing Lanes To The Left**) was changing lanes to the left, and
4. the vehicle on the left (**Sideswipe/Angle, Changing Lanes To The Right**) was changing lanes to the right, and the vehicle on the right (**Sideswipe/Angle, Changing Lanes To The Left**) was changing lanes to the left.

In addition, when:

1. the right sides of the two vehicles impact following a 180-degree rotation of the vehicle on the right, or
2. the left sides of the two vehicles impact following a 180-degree rotation of the vehicle on the left.

Select the appropriate combination depending upon:

1. their positions (i.e., left versus right) and
2. the intended lane of travel (straight ahead versus changing lanes) of their drivers.

#### ***44 (Sideswipe/Angle: Straight Ahead on Left)***

See discussion under [Configuration F. Sideswipe/Angle](#), above for an explanation of when this attribute applies.

#### ***45 (Sideswipe/Angle: Straight Ahead on Left/Right)***

See discussion under [Configuration F. Sideswipe/Angle](#), above for an explanation of when this attribute applies.

#### ***46 (Sideswipe/Angle: Changing Lanes to the Right)***

See discussion under [Configuration F. Sideswipe/Angle](#), above for an explanation of when this attribute applies.

#### 47 (*Sideswipe/Angle: Changing Lanes to the Left*)

See discussion under [Configuration F. Sideswipe/Angle](#), above for an explanation of when this attribute applies.

#### 48 (*Sideswipe/Angle: Specifics Other*)

EACH: **48**  
SPECIFICS  
OTHER

Use **Sideswipe/Angle: Specifics Other** if one vehicle was behind the other prior to a sideswipe/angle collision occurring while both vehicles were traveling on the same trafficway and in the same direction.

For example, use this code when two vehicles are on the same trafficway and going the same direction, and one loses control and is struck in the side by the front of the other vehicle. However, if one vehicle rotates such that the impact is front to front, then use code [98 \(Other crash type\)](#).

Use **Sideswipe/Angle: Specifics Other** for crashes involving a driverless in-transport vehicle.

#### 49 (*Sideswipe/Angle: Specifics Unknown*)

EACH: **49**  
SPECIFICS  
UNKNOWN

Use **Sideswipe/Angle: Specifics Unknown** for sideswipe/angle collisions that occur while both vehicles are traveling on the same trafficway and in the same direction when no further classification is possible.

### **Category III. Same Trafficway, Opposite Direction**

#### **Configuration G. Head-On**

The frontal area of one vehicle impacted the frontal area of another.

#### 50 (*Head-On: Lateral Move (Left/Right)*)

Use **Head-On: Lateral Move (Left/Right)** for a vehicle that LEAVES ITS LANE [moves laterally (sideways)] immediately before colliding head-on with another vehicle, when the vehicles are traveling on the same trafficway in opposite directions.

### **51 (Head-On: Lateral Move (Going Straight))**

Use **Head-On: Lateral Move (Going Straight)** for a vehicle that collides head-on with another vehicle that has IMMEDIATELY LEFT ITS LANE (moved laterally) when the vehicles are traveling on the same trafficway in opposite directions.

### **52 (Head-On: Specifics Other)**

Use **Head-On: Specifics Other** for a head-on collision that cannot be described by “50-51,” when the vehicles are traveling on the same trafficway in opposite directions. Clarification: Enter “52” for both vehicles involved in a head-on collision when one is traveling the wrong way on a one-way roadway.

Enter “Specifics Other” for crashes involving a driverless in-transport vehicle.

### **53 (Head-On: Specifics Unknown)**

Use **Head-On: Specifics Unknown** when the case material indicate a head-on collision occurred between two vehicles traveling on the same trafficway in opposite directions, when no further classification is possible.

### **Configuration H. Forward Impact**

The frontal area of one vehicle impacted the frontal area of another following a steering maneuver around a noninvolved vehicle or an object.

### **54 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a vehicle whose frontal area impacts another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a third vehicle) while the vehicles are traveling on the same trafficway in opposite directions.

**55 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a vehicle that is impacted by the frontal area of another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a third vehicle) while the vehicles are traveling on the same trafficway in opposite directions.

**56 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a vehicle whose frontal area impacts another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-fixed object (garbage can, person, animal, etc.) in the Road) while the vehicles are traveling on the same trafficway in opposite directions.

**57 (Forward Impact: Control/Traction Loss)**

Use **Forward Impact: Control/Traction Loss** for a vehicle that is impacted by the frontal area of another vehicle due to loss of control or traction (during a maneuver to avoid a collision with a non-fixed object (garbage can, person, animal, etc.) in the Road) while the vehicles are traveling on the same trafficway in opposite directions.

**58 (Forward Impact: Avoid Collision with Vehicle)**

Use **Forward Impact: Avoid Collision with Vehicle** for a vehicle whose frontal area impacts another vehicle while maneuvering to avoid a collision with a non-involved vehicle, when loss of control or traction was not a factor, and the vehicles were traveling on the same trafficway, in opposite directions.

**59 (Forward Impact: Avoid Collision with Vehicle)**

Use **Forward Impact: Avoid Collision with Vehicle** for a vehicle that was impacted by the frontal area of another vehicle that was maneuvering to avoid collision with a non-involved vehicle, when loss of control or traction was not a factor, and the vehicles were traveling on the same trafficway, in opposite directions.

### 60 (*Forward Impact: Avoid Collision with Object*)

Use **Forward Impact: Avoid Collision with Object** for a vehicle that struck the front of another vehicle with the frontal plane while maneuvering to avoid collision with a non-fixed object (garbage can, person, animal, etc.) in the road, when loss of control or traction was not a factor, and the vehicles were traveling on the same trafficway, in opposite directions.

### 61 (*Forward Impact: Avoid Collision with Object*)

Use **Forward Impact: Avoid Collision with Object** for a vehicle that was impacted by the frontal area of another vehicle that was maneuvering to avoid collision with a non-fixed object (garbage can, person, animal, etc.) in the road, when loss of control or traction was not a factor, and the vehicles were traveling on the same trafficway, in opposite directions.

### 62 (*Forward Impact: Specifics Other*)

Use **Forward Impact: Specifics Other** for forward impact collisions occurring while the vehicles were traveling on the same trafficway in opposite directions that cannot be described by [“54-61.”](#) Enter “Specifics Other” for crashes involving a “driverless in-transport vehicle.”

### 63 (*Forward Impact: Specifics Unknown*)

Use **Forward Impact: Specifics Unknown** when the case material indicate a forward impact collision occurred while the vehicles were traveling on the same trafficway in opposite directions, but no further classification is possible.

### Configuration I. Sideswipe/Angle

The two vehicles are involved in an impact involving the side of one or both vehicles.

### 64 (*Sideswipe/Angle: Lateral Move (Left/Right)*)

Use **Sideswipe/Angle: Lateral Move (Left/Right)** identifies the vehicle that **infringed upon the other vehicle** (code “65”) in a Category III, Configuration I collision; i.e., enter “64” for the vehicle that left its lane (moved laterally) leading to the collision.

**65 (Sideswipe/Angle: Lateral Move (Going Straight))**

Use **Sideswipe/Angle: Lateral Move (Going Straight)** for the vehicle that was infringed upon by the other vehicle (code “64”) in a Category III, Configuration I collision.

**66 (Sideswipe/Angle: Specifics Other)**

EACH: **66**  
SPECIFICS  
OTHER

Use **Sideswipe/Angle: Specifics Other** for sideswipe/angle collisions occurring while both vehicles were traveling on the same trafficway in opposite directions that cannot be described by “64-65.” Enter “Specifics Other” for crashes involving a “driverless in-transport vehicle.”

However, if one vehicle rotates such that the impact is front to front or front to rear, and did not result from a steering maneuver around a noninvolved vehicle or an object ([Configuration H](#)) then use code **98 (Other Crash Type)**.

**67 (Sideswipe/Angle: Specifics Unknown)**

EACH: **67**  
SPECIFICS  
UNKNOWN

Use **Sideswipe/Angle: Specifics Unknown** when the case material indicate a sideswipe/angle collision occurred while both vehicles were traveling on the same trafficway in opposite directions, but no further classification is possible.

**Category IV. Changing Trafficway, Vehicle Turning**

**Configuration J. Turn Across Path**

The two vehicles were initially on the same trafficway when one vehicle tried to turn onto another trafficway, a driveway, or parking lot and pulled in front of the other vehicle. Vehicles making a “U” turn are identified in [Category VI. Miscellaneous](#).

**68 (Turn Across Path: Initial Opposite Directions (Left/Right))**

Use **Turn Across Path: Initial Opposite Directions (Left/Right)** for the vehicle that turned across the path of another vehicle (**Turn Across Path: Initial Opposite Directions [Going**

**Straight])** in a Category IV, Configuration J collision, in which the vehicles were initially traveling in opposite directions.

**69 (Turn Across Path: Initial Opposite Directions (Going Straight))**

Use **Turn Across Path: Initial Opposite Directions (Going Straight)** for a vehicle involved in a collision in which another vehicle (**Turn Across Path: Initial Opposite Directions [Left/Right]**) across its Path, and in which the vehicles were initially traveling in opposite directions.

**70 (Turn Across Path: Initial Same Directions (Turning Right))**

Use **Turn Across Path: Initial Same Directions (Turning Right)** for a vehicle that turned right, across the path of another vehicle (**Turn Across Path: Initial Same Directions [Going Straight]**), when both vehicles were initially traveling in the same direction.

**71 (Turn Across Path: Initial Same Directions (Going Straight))**

**Turn Across Path: Initial Same Directions (Going Straight)** for a vehicle whose path was crossed by a vehicle turning right (**Turn Across Path: Initial Same Directions (Turning Right)**), when both vehicles were initially traveling in the same direction.

**72 (Turn Across Path: Initial Same Directions (Turning Left))**

Use **Turn Across Path: Initial Same Directions (Turning Left)** for a vehicle that turned left, across the path of another vehicle (**Turn Across Path: Initial Same Directions [Going Straight]**), when both vehicles were initially traveling in the same direction.

**73 (Turn Across Path: Initial Same Directions (Going Straight))**

Use **Turn Across Path: Initial Same Directions (Going Straight)** for a vehicle whose path was crossed by a vehicle turning left (**Turn Across Path: Initial Same Directions [Turning Left]**), when both vehicles were initially traveling in the same direction.

**74 (Turn Across Path: Specifics Other)**

|                 |
|-----------------|
| EACH: <b>74</b> |
| SPECIFICS       |
| OTHER           |

Use **Turn Across Path: Specifics Other** for collisions in which one vehicle turned across another's path, which cannot be described by "68-72." Enter "Specifics Other" for crashes involving a driverless in-transport vehicle.

### 75 (*Turn Across Path: Specifics Unknown*)

EACH: **75**  
SPECIFICS  
UNKNOWN

Use **Turn Across Path: Specifics Unknown** when the case material indicate one vehicle turned across another's path, causing a collision, but no further classification is possible.

### Configuration K. Turn Into Path

The two vehicles were initially on different trafficways when one attempted to turn into the same trafficway as the other vehicle. For the purposes of Crash Typing, "trafficway" as used here includes a driveway or parking lot.

Note: The focus of this configuration is on the turning maneuver from one trafficway to another and not on the vehicles' plane of contact.

### 76 (*Turn into Same Direction (Turning Left)*)

Use **Turn into Same Direction (Turning Left)** for a vehicle that turned left, into the path of another vehicle (**Turn into Same Direction [Going Straight]**), so that both vehicles were traveling in the same direction at the time of the collision.

### 77 (*Turn into Same Direction (Going Straight)*)

Use **Turn into Same Direction (Going Straight)** for a vehicle involved in a collision in which another vehicle (**Turn into Same Direction [Turning Left]**) turned left, into its path, so that both vehicles were traveling in the same direction at the time of the collision.

### 78 (*Turn into Same Direction (Turning Right)*)

Use **Turn into Same Direction (Turning Right)** for a vehicle that turned right, into the path of another vehicle (**Turn into Same Direction [Going Straight]**), so that both vehicles were traveling in the same direction at the time of the collision.

### 79 (*Turn into Same Direction (Going Straight)*)

Use **Turn into Same Direction (Going Straight)** for a vehicle involved in a collision in which another vehicle (**Turn into Same Direction [Turning Right]**) turned right, into its path, so that both vehicles were traveling in the same direction at the time of the collision.

### 80 (Turn into Opposite Directions (Turning Right))

Use **Turn into Opposite Directions (Turning Right)** for a vehicle that turned right, into the path of another vehicle (**Into Opposite Directions [Going Straight]**), so that the vehicles were traveling in opposite directions at the time of the collision.

### 81 (Turn into Opposite Directions (Going Straight))

Use **Turn into Opposite Directions (Going Straight)** for a vehicle involved in a collision in which another vehicle (**Turn into Opposite Directions [Turning Right]**) turned right, into its path, so that the vehicles were traveling in opposite directions at the time of the collision.

### 82 (Turn into Opposite Directions (Turning Left))

Use **Turn into Opposite Directions (Turning Left)** for a vehicle that turned left, into the path of another vehicle (**Turn into Opposite Directions [Going Straight]**), so that the vehicles were traveling in opposite directions at the time of the collision.

**Turn into Opposite Directions (Turning Left)** is used when the driver's vehicle was in the act of making a left turn (e.g., from a driveway, parking lot, or intersection). Do not confuse this situation with "[Configuration L - Straight Paths](#)." The driver's intended path is the prime concern.

### 83 (Turn into Opposite Directions (Going Straight))

Use **Turn into Opposite Directions (Going Straight)** for a vehicle involved in a collision in which another vehicle (**Turn into Opposite Directions [Turning Left]**) turned left, into its path, so that the vehicles were traveling in opposite directions at the time of the collision.

### 84 (Turn into Path: Specifics Other)

Use **Turn into Path: Specifics Other** for collisions in which one vehicle turned into another's path, which cannot be described by "76-83." Enter "Specifics Other" for crashes involving a driverless in-transport vehicle.

### **85 (Turn into Path: Specifics Unknown)**

Use **Turn into Path: Specifics Unknown** when the case material indicate one vehicle turned into another's path, causing a collision, but no further classification is possible.

## **Category V. Intersecting Paths (Vehicle Damage)**

### **Configuration L. Straight Paths**

The two vehicles were proceeding (or attempting to proceed) straight ahead.

### **86 (Straight Paths: Striking from the Right)**

Use **Straight Paths: Striking from the Right** for a vehicle that strikes the right side of another vehicle (code "87") from the right when both vehicles were going straight at the time of the collision, i.e., right side damage to 87, front damage to 86.

### **87 (Straight Paths: Struck on the Right)**

Use **Straight Paths: Struck on the Right** for a vehicle that is struck on the right side by another vehicle (**Straight Paths: Striking from the Right**) from the right when both vehicles were going straight at the time of the collision, i.e., right side damage to 87, front damage to 86.

### **88 (Straight Paths: Striking from the Left)**

Use **Straight Paths: Striking from the Left** for a vehicle that strikes another vehicle (**Straight Paths: Struck on the Left**) from the left when both vehicles were going straight at the time of the collision, i.e., left side damage to 89, front damage to 88.

### **89 (Straight Paths: Struck on the Left)**

Use **Straight Paths: Struck on the Left** for a vehicle that is struck on the left side by another vehicle (**Straight Paths: Striking from the Left**) from the left when both vehicles were going straight at the time of the collision, i.e., left side damage to 89, front damage to 88.

### 90 (Straight Paths: Specifics Other)

Use **Straight Paths: Specifics Other** for collisions in which two vehicles, both going straight, collide when their paths intersect, which cannot be described by “86-89.” Enter “Specifics Other” for crashes involving a driverless in-transport vehicle.

### 91 (Straight Paths: Specifics Unknown)

Use **Straight Paths: Specifics Unknown** when the case material indicate two vehicles, both going straight, collided when their paths intersected, but no further classification is possible.

## Category VI. Miscellaneous

### Configuration M. Backing, etc.

One of the two vehicles involved was a backing vehicle, regardless of its location on the trafficway or the damage location on the vehicles.

Any crash configuration that cannot be described in Category I. through V. is included here.

### 92 (Backing, etc.: Backing Vehicle)

Use **Backing, etc.: Backing Vehicle** for a backing vehicle that was involved with another vehicle, object, or non-motorist. If both vehicles were backing, then code 92 for both vehicles. If the vehicle was driverless or unintentionally rolling backwards, use [98 \(Other Crash Type\)](#).

### 93 (Backing, etc.: Other Vehicle)

Use **Backing, etc.: Other Vehicle** for the in-transport vehicle that was involved with the backing vehicle (code 92). Attribute 93 can only apply when there are two motor vehicles in-transport.

**98** OTHER CRASH TYPE

**99** UNKNOWN CRASH TYPE

**00** NO IMPACT

### ***98 (Other Crash Type)***

**Other Crash Type** is used for those events and collisions that do not reasonably fit any of the specified types. This code includes (but is not limited to): rollovers on the road; U-turns; crashes initiated by objects set in motion by an in-transport motor vehicle; third or subsequent vehicles involved in a crash; or the second involved vehicle, when the first harmful event involves a vehicle-to-object collision or a non-collision.

### ***99 (Unknown Crash Type)***

Use **Unknown Crash Type** when the crash category or configuration is unknown.

### ***00 (No Impact)***

**No Impact** identifies the non-collision events fire, immersion, gas inhalation, jackknife, injured in vehicle, pavement surface irregularity, other non-collision, thrown or falling object, cargo equipment loss or shift, or fell/jumped from vehicle. Rollovers on the road should be coded **98 (Other Crash Type)**.

### ***The following crash types require clarification:***

**No impact** identifies non-collision events (i.e., fire, immersion, gas inhalation, jackknife, non-collision injury, other non-collision, or non-collision - no details). Rollovers on the road should be coded as **98 (Other Crash Type)**.

**Right roadside departure, drive off road** and **Left roadside departure, drive off road** are used when the vehicle departed the road under a controlled situation (the driver was distracted, fell asleep, intentionally departed, etc.).

**Right roadside departure, control/traction loss** and **Left roadside departure, control/traction loss** are used if there is some evidence that the vehicle lost traction or in some other manner “got away” from the driver (i.e., the vehicle spun off the road as a result of surface conditions, oversteer phenomena, or mechanical malfunctions). If doubt exists, use **Right roadside departure, drive off road** or **Left roadside departure, drive off road** respectively.

**Right roadside departure; avoid collision with vehicle, pedestrian, animal** and **Left roadside departure; avoid collision with vehicle, pedestrian, animal** are used when the vehicle departed the road as a result of avoiding something in the road. “Phantom” situations are included here.

**Right roadside departure, specifics other** and **Left roadside departure, specifics other** are used for any other stationary or nonstationary objects if the avoidance characteristics of codes “03” or “08” are present.

**Forward impact, parked vehicle**, **Forward impact, stationary object**, and **Forward impact, pedestrian/animal** involves an impact with an object that can be located on either side of the road.

**Forward impact, stationary object** includes a hole in the road, an overhead object (e.g., overpass), or an object projecting over the road edge (e.g., support column of elevated railway).

**Forward impact, pedestrian/animal** is used when a pedestrian, non-motorist, or animal is involved with the first harmful event. Vehicle plane of contact is not a consideration.

**Forward impact, specifics other** is used for impacted (striking or struck) trains and nonstationary objects on the road.

**Sideswipe/Angle, straight ahead on left**, **Sideswipe/Angle, straight ahead on left/right**, **Sideswipe/Angle, changing lanes to the right**, and **Sideswipe/Angle, changing lanes to the left** identify relative vehicle positions (left versus right) and lane of travel intentions (straight ahead versus changing lanes).

From these four codes, four combinations are permitted. They are:

1. “44” and “45,”
2. “46” and “45,”
3. “45” and “47,” and
4. “46” and “47.”

When used as a combination these codes refer to a sideswipe or angle collision that involved a vehicle to the left of a vehicle to the right where:

1. neither vehicle (codes “44” and “45”) intended to change its lane;
2. the vehicle on the left (code “46”) was changing lanes to the right, and the vehicle on the right (code “45”) was not intending to change its lane;
3. the vehicle on the left (code “45”) was not intending to change its lane, and the vehicle on the right (code “47”) was changing lanes to the left; and
4. the vehicle on the left (code “46”) was changing lanes to the right, and the vehicle on the right (code “47”) was changing lanes to the left.

In addition, when:

1. the right sides of the two vehicles impact following a 180-degree rotation of the vehicle on the right, or
2. the left sides of the two vehicles impact following a 180-degree rotation of the vehicle on the left; select the appropriate combination (“44-45,” “46-45,” “45-47,” or “46-47”) depending upon:
3. their positions (i.e., left versus right), and
4. the intended lane of travel (straight ahead versus changing lanes) of their drivers.

**Sideswipe/Angle, specifics other** is used if one vehicle was behind the other prior to their Category II, Configuration F collision. For example, use this code when two vehicles are on the same trafficway and going the same direction, and one loses control and is struck in the side by the front of the other vehicle. However, if one vehicle rotates such that the impact is front to front, then use code **98 (Other crash type)**.

[Sideswipe/Angle, lateral move \(Left/Right\)](#) identifies the vehicle that infringed upon the other (code 65) in a Category III, Configuration I collision.

Codes 68 through 85 ([Turn Across Path](#) and [Turn into Path](#)) are used in Configurations J and K where the vehicle's action is the controlling factor, and the plane of contact is irrelevant.

[Turn into Opposite Direction \(Turning Left\)](#) is used when the driver's vehicle was in the act of making a left turn (e.g., from a driveway, parking lot, or intersection). Do not confuse this situation with [Configuration L. Straight Paths](#). The driver's intended path is the prime concern.

Codes 86 through 89 ([Straight Paths](#)) must not be confused with crash types in [Configuration K. Turn into Path](#). For these codes the vehicles are proceeding (or attempting to proceed) straight ahead, usually at a junction.

[Other Crash Type](#) is used for those events and collisions that do not reasonably fit any of the specified types. This code includes (but is not limited to): rollovers on the road, U-turns, crashes initiated by objects set in motion by an in-transport motor vehicle, third or subsequent vehicles involved in a crash, or the second involved vehicle when the first harmful event involved a vehicle-to-object collision.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                              | <b>THEN</b>                                                                                                 |
|-----------------|------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 253P            | RELATION TO TRAFFICWAY equals 03,                                      | CRASH TYPE should equal 06-10, 98, or 99 for the in-transport vehicles involved in the FIRST HARMFUL EVENT. |
| 3B1P            | CRASH TYPE equals 21-23,                                               | TRAVEL SPEED must equal 000 for this vehicle.                                                               |

### P3 - Vehicle Number - Person Level (Motor Vehicle Occupant)

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.VEH\_NO, Person.VEH\_NO, Parkwork.VEH\_NO

**ELEMENT VALUES:**

| Codes   | Attributes      |
|---------|-----------------|
| 001-999 | Assigned Number |

**Definition:** This element identifies the vehicle number associated with this motor vehicle occupant.

**Remarks:** 001-999 is used for motor vehicle occupants (In-Transport, Parked/Stopped Off Roadway/ Working Motor Vehicles, and Motor Vehicles in Motion Outside the Trafficway).

People ejected or who fall from a motor vehicle in-transport are still considered occupants of that vehicle for the duration of the unstabilized situation.

**Consistency Check** ([See Section 400](#)):

| Error ID | IF                                                      | THEN                                                                                 |
|----------|---------------------------------------------------------|--------------------------------------------------------------------------------------|
| CSI5     | VEHICLE NUMBER at the Person Level is greater than 000, | VEHICLE NUMBER at the Person Level must equal a VEHICLE NUMBER at the Vehicle Level. |

### P4/NM3 - Person Number

**FORMAT:** 3 numeric

**SAS NAME:** Person.PER\_NO

#### ELEMENT VALUES:

| Codes   | Attributes                         |
|---------|------------------------------------|
| 001-999 | Assigned Number/ Computer Assigned |

**Definition:** This element identifies a number for the motor vehicle occupant in consecutive order for the vehicle they occupied.

**Remarks:** Person Number is assigned using the police crash report's person number.

Person Level (Motor Vehicle Occupant) must be numbered consecutively beginning with "001" for each motor vehicle occupant. Drivers do not have to be "001." Numbers must not be skipped.

Person Level (Not a Motor Vehicle Occupant) must be numbered consecutively beginning with "001" for people not in motor vehicles. Numbers must not be skipped.

#### Consistency Check [\(See Section 400\)](#):

| Error ID | Error Message                                                                                     |
|----------|---------------------------------------------------------------------------------------------------|
| CSI6     | For each VEHICLE NUMBER, PERSON NUMBERS must be consecutive, beginning with 001 and with no gaps. |

## P5/NM5 - Age

**FORMAT:** 3 numeric

**SAS NAME:** Person.AGE

### ELEMENT VALUES:

| Codes   | Attributes                          |
|---------|-------------------------------------|
| 000     | Less than One Year                  |
| 001-120 | Actual Age*                         |
| 998     | <a href="#">Not Reported</a>        |
| 999     | <a href="#">Reported as Unknown</a> |

**Definition:** This element identifies the person's age, in years, with respect to the person's last birthday.

**Remarks:** If the case material does not show the age of injured or uninjured drivers or passengers and there is no other information about age, e.g., in the narrative/diagram, then use **998 (Not Reported)**.

**998 (Not Reported)** Check to see if [999 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **998 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**999 (Reported as Unknown)** is used if the investigating officer indicates that this occupant's age is unknown.

\* Values greater than "094" are unlikely occurrences, and they will raise an error flag.

\* Values greater than "120" are not permitted.

### FARS SPECIAL INSTRUCTION:

For drivers, verify age with data on Licensing File. Licensing data takes precedence over crash report data.

**Consistency Checks ([See Section 400](#)):**

## P6/NM6 - Sex

**FORMAT:** 1 numeric

**SAS NAME:** Person.SEX

### ELEMENT VALUES:

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | Male                                |
| 2     | Female                              |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

**Definition:** This element identifies the sex of the person involved in the crash.

**Remarks:** If the case material does not show the sex of injured or uninjured drivers or passengers and there is no other information about sex, e.g., in the narrative/diagram, then use **8 (Not Reported)**.

**8 (Not Reported)** *Check to see if [9 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used if the investigating officer indicates that this occupant's sex is unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>Error Message</b>                                                                                                                                                                                                             |

## P7 - Person Type

**FORMAT:** 2 numeric

**SAS NAME:** Person.PER\_TYP

**ELEMENT VALUES:**

| Codes | Attributes                                                            |
|-------|-----------------------------------------------------------------------|
| 01    | <a href="#">Driver of a Motor Vehicle In-Transport</a>                |
| 02    | <a href="#">Passenger of a Motor Vehicle In-Transport</a>             |
| 03    | <a href="#">Occupant of a Motor Vehicle Not In-Transport</a>          |
| 09    | <a href="#">Unknown Occupant Type in a Motor Vehicle In-Transport</a> |

**Definition:** This element describes the role of this person involved in the crash.

**Remarks:** Drivers and passengers are motor vehicle occupants. An involved person in a crash must maintain PERSON TYPE during the crash. Once the unstabilized situation begins, a driver, passenger, or non-motorist/non-occupant cannot change PERSON TYPE until the situation stabilizes. A motor vehicle occupant is any person who is part of a motor vehicle (i.e., in it, on it, or attached to it).

If a person is entering or exiting a vehicle before the unstabilized situation begins, try to determine if the person has successfully changed type before control is lost. For example, a person attempting to get into an automobile that begins to move would be classified as a pedestrian. Likewise, a passenger stepping off a bus as it begins to pull away would be classified as an occupant.

Attributes 01, 02, and 09 are used for occupants of a motor vehicle in-transport. This includes occupants of motor vehicles that are in motion outside the trafficway.

**01 (Driver of a Motor Vehicle In-Transport)** is used for a person who is in actual physical control of a motor vehicle or in the case of an out of control vehicle the person that was in control just prior to the unstabilized situation.

In FARS and CRSS, people less than 12 years old will raise an edit check. People less than 8 years old are forbidden from operating motor vehicles except for NCSA BODY TYPES [88](#), [90](#), [91](#). In these circumstances the vehicles are classified as [0 \(No Driver Present/Not Applicable\)](#) in the element [DRIVER PRESENCE](#) and any underage occupant seated in the driver's position on the crash report is coded as PERSON TYPE [2 \(Passenger of a Motor Vehicle In-Transport\)](#) with [SEATING POSITION](#) value [11 \(Front Seat, Left Side\)](#). People who are less than 2 years old are forbidden in FARS/CRSS from being a driver of any motor vehicle.

**02 (Passenger of a Motor Vehicle In-Transport)** is used for any occupant of a motor vehicle in-transport other than the driver.

If this person was appended to a motor vehicle for motion ("skitching")<sup>3</sup> at the onset of the unstabilized situation, also use SEATING POSITION code [56 \(Appended to a Motor Vehicle](#)

---

<sup>3</sup> Abbreviated from "skate-hitching", the act of hitching a ride by holding onto a motor vehicle while riding on a skateboard, roller skates or bicycle.

[for Motion](#)). The person may be appended to the vehicle by any means (hand grasp, tow rope etc.), and may also be using a non-motorist device such as a bicycle, skateboard, hoverboard, or sled at the onset of the unstabilized situation. It must be clear that the person was connected at the onset of the unstabilized situation. If it is unclear or if the person was previously connected or attempting to connect, see RELATED FACTORS - PERSON (NOT A MOTOR VEHICLE OCCUPANT) LEVEL codes [053 \(Non-Motorist Previously Used a Motor Vehicle for Motion\)](#), [054 \(Non-Motorist Attempting to Use a Motor Vehicle for Motion\)](#), and [055 \(Non-Motorist Attempting to Use or Previously Used a Motor Vehicle for Motion, Details Not Reported\)](#).

**03 (Occupant of a Motor Vehicle Not In-Transport)** is used for any occupant of a motor vehicle not in-transport including someone sitting in the driver's seat position.

**09 (Unknown Occupant Type in a Motor Vehicle In-Transport)** is used when it cannot be determined if the person was the driver or passenger, but it is known that the person was an occupant of a motor vehicle in-transport.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | THEN                                              |

**Definition:** This element describes the severity of the injury to this person in the crash.

**Remarks:** Enter the most severe police reported injury severity for this person (i.e., occupant, pedestrian or non-motorist). Most jurisdictions use the KABCO injury coding scheme.

**K** = Fatal Injury (Killed)

**A** = Suspected Serious Injury (Incapacitating Injury)

**B** = Suspected Minor Injury (Non-incapacitating Injury)

**C** = Possible Injury

**O** = No Apparent Injury (No Injury)

If there are discrepancies between the injury severity reported in the police report fields and the narrative, use the following guidance.

| Report Field            | Narrative                                                                      | Guidance                                  |
|-------------------------|--------------------------------------------------------------------------------|-------------------------------------------|
| Contains Coded Response | <b>No Conflict</b> With Coded Report Field                                     | USE CODED REPORT FIELD                    |
| <b>Not Coded</b>        | <b>Silent</b> on injuries                                                      | INJURY SEVERITY, 9 (Unknown/Not Reported) |
| Contains Coded Response | <b>Silent</b> on injuries                                                      | USE CODED REPORT FIELD                    |
| Contains Coded Response | Includes clear descriptions of injuries <b>more severe</b> than Coded Response | USE NARRATIVE                             |

| Report Field            | Narrative                                                                                                                   | Guidance               |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------|------------------------|
| <b>Not Coded</b>        | Includes <b>some</b> injury information.<br>Unknown if information is complete.                                             | USE NARRATIVE          |
| Contains Coded Response | Includes clear descriptions only of injuries <b>less severe</b> than Coded Response.<br>Unknown if information is complete. | USE CODED REPORT FIELD |

**0 (No Apparent Injury)** is a situation where there is no reason to believe that the person received any bodily harm from the motor vehicle crash. There is no physical evidence of injury and the person does not report any change in normal function.

**1 (Possible Injury)** is any injury reported or claimed that is not a fatal injury, suspected serious injury, or suspected minor injury. Examples include momentary loss of consciousness, possible concussion, claim of injury limping, complaint of pain, or nausea. Possible injuries are those that are reported by the person or are indicated by his/her behavior, but no wounds or injuries are readily evident.

**2 (Suspected Minor Injury)** is any injury that is evident at the scene of the crash, other than fatal or serious injuries. Examples include lump on the head, abrasions, bruises, minor lacerations (cuts on the skin surface with minimal bleeding and no exposure of deeper tissue/muscle). This does not include momentary unconsciousness. (See [1 \(Possible Injury\)](#)).

**3 (Suspected Serious Injury)** is any injury other than fatal that results in one or more of the following.

- Severe laceration resulting in exposure of underlying tissues/muscle/organs or resulting in significant loss of blood
- Broken or distorted extremity (arm or leg)
- Crush injuries
- Suspected skull, chest, or abdominal injury other than bruises or minor lacerations
- Significant burns (second and third degree burns over 10 percent or more of the body)
- Unconsciousness when taken from the crash scene
- Paralysis

This does not include limping (the injury cannot be seen). (See [1 \(Possible Injury\)](#)).

**4 (Fatal Injury)** A fatal injury is any injury that results in death within 30 days after the motor vehicle crash in which the injury occurred. If the person did not die at the scene but died within 30 days of the motor vehicle crash in which the injury occurred, the injury classification should be changed from the attribute previously assigned to the attribute **4 (Fatal Injury)**.

**5 (Injured, Severity Unknown)** It is known the person was injured but the severity of the injury is not known.

**6 (Died Prior to Crash)\*** refers to non-motor vehicle fatalities (e.g., a heart attack victim, a homicide victim, a suicide, or person involved in a legal intervention) that are involved in a motor vehicle traffic crash.

This attribute is used only if the police explicitly states the person died prior to the crash and the police report indicates the person died as a result of natural causes (e.g., heart attack), disease, drug overdose or alcohol poisoning, suicide, homicide, and legal intervention.

This attribute also applies if the police report indicates that the person died as a result of natural causes (e.g., heart attack) or disease but is silent about the time of on-set or if on-set is the result of injuries sustained in the crash.

In suicide incidents, use the following criteria:

1. If the only fatality is the suicide victim and it can be ascertained that the crash was a suicide, do not code the case.
2. If other fatalities occur, code the case as appropriate. The suicide victim's Injury Severity should be coded **6 (Died Prior to Crash)** if the death occurred at the time of the crash (or prior) or **0 (No Apparent Injury)** if the death occurred after the crash.

This attribute does not apply if the police report specifically states that the cause of death is a result of crash-related injury or that on-set occurred after the crash.

\* This value is an unlikely occurrence and will raise an edit flag.

**9 (Unknown/Not Reported) is used when:**

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material); or
2. a field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material); or
3. police indicate unknown.

**Note:** If a State's crash report manual instructs to leave data blocks blank when there is no injury, then a blank in those data blocks are NOT considered **9 (Unknown/Not Reported)**.

**FARS SPECIAL INSTRUCTION:**

Each case must have at least one Person Level form with INJURY SEVERITY attribute **4 (Fatal injury)**. See Definition: [ANSI D16.1](#); 2.3.1 and 2.3.2

**Definition:** This element identifies the location of this person in or on the vehicle.

**Remarks:** Seating Position is determined by the location of the occupant in relation to the seat row and the forward longitudinal axis of the vehicle. (See [Figure 27](#))

More than one person may be assigned the same seating position; however, this is allowed only when a person is sitting on someone's lap (e.g., child on mother's lap). See Remarks under [RESTRAINT SYSTEM USE](#) and [DRIVER LEVEL - RELATED FACTORS](#) for situations where the case material identifies improper usage of seating or restraints (two people sharing the same restraint, two people sitting abreast in the same seat, or on one another's lap, etc.).

If the case material does not specifically state that one person was on the lap of another, then see the discussion and tables below to address these situations.

In seating rows designated for only two passengers, use **11 (Front Seat, Left Side)**, **13 (Front Seat, Right Side)**, **21 (Second Seat, Left Side)**, **23 (Second Seat, Right Side)**, **31 (Third Seat, Left Side)**, **33 (Third Seat, Right Side)**, **41 (Fourth Seat, Left Side)**, **43 (Fourth Seat, Right Side)**, or **51 (Other Passenger in enclosed passenger or cargo area)**.

**11 (Front Seat, Left Side)** is typically thought of as the driver seating position. This is also used for an assumed driver of a hit-and-run vehicle unless evidence indicates a different position for the person or people. [Note: For motorcycle occupants, see passage below.](#)

**18 (Front Seat, Other)**, **28 (Second Seat, Other)**, **38 (Third Seat, Other)**, and **48 (Fourth Seat, Other)** are used to record the position of someone sitting on the floor or lying across the seat. In addition, enter these attributes when two or more people are sitting abreast of one another in the same seating location (as opposed to on or in someone's lap), since only one occupant can be assigned the seat's position. These attributes are also used if there is only one seat in the seating row (bucket, pedestal, etc.), and the occupant was in the area but not in the seat. This situation could occur because of vehicle design or seat removal.

**19 (Front Seat, Unknown)**, **29 (Second Seat, Unknown)**, **39 (Third Seat, Unknown)**, and **49 (Fourth Seat, Unknown)** are used to record the position of someone when the seating row is known; but, the seat position is not known and **18 (Front Seat, Other)**, **28 (Second Seat, Other)**, **38 (Third Seat, Other)**, and **48 (Fourth Seat, Other)** do not apply. The tables below provide coding guidance for situations when more than one person is reported as occupying the same seat position. Note that if the report identifies that one person is sitting in another's lap (e.g., child on mother's lap) both occupants may be assigned the same seat position.

#### **Several People in Front Left (Driver's Seat)**

**Situation:** You know who the driver is; however, it is unknown if other person is seated side-by-side with driver or on the driver's lap:

| Person       | Seating Position    |
|--------------|---------------------|
| The Driver   | Front, Left (11)    |
| Other Person | Front, Unknown (19) |

**Situation:** You don't know who the driver is, and it is unknown if side-by-side or on another's lap:

| Person  | Seating Position    |
|---------|---------------------|
| Unknown | Front, Unknown (19) |
| Unknown | Front, Unknown (19) |

### Several People in Other Seats

**Situation:** If you know one is in another's lap - Both get same Seating Position.

**Situation:** If you don't know if they are sitting side-by-side or in another's lap - Both get that row, unknown.

**Situation:** If you know they are sitting side-by-side and only one had a restraint:

| Person                | Seating Position |
|-----------------------|------------------|
| Person with restraint | As indicated     |
| Other Person          | That row, other  |

**Situation:** If you know they are sitting side-by-side and both had restraints:

| Person        | Seating Position |
|---------------|------------------|
| Oldest Person | As indicated     |
| Other Person  | That row, other  |

**Situation:** If you know they are sitting side-by-side and neither had restraints:

| Person        | Seating Position |
|---------------|------------------|
| Oldest Person | As indicated     |
| Other Person  | That row, other  |

**50 (Sleeper Section of Cab [Truck])** is used if the occupant's vehicle is a medium or heavy truck and has a cab sleeper, and this occupant is in the sleeper section at the time of the crash.

**51 (Other Passenger in Enclosed Passenger or Cargo Area)** is used when an occupant is in the fifth or higher numbered seat row, in an enclosed area where no defined seating exists or using a fold-down type seat in its folded-down position. This attribute is also used for bus passengers in undetermined seating (not driver) and for bus occupants that fall from an open door.

**Note:** People in treatment compartment of an ambulance, code as **51 (Other Passenger in Enclosed Passenger or Cargo Area)**. (See examples under RELATED FACTORS - PERSON (MV OCCUPANT) LEVEL attribute [092 \(Person in Ambulance Treatment Compartment\)](#).)

**52 (Other Passenger in Unenclosed Passenger or Cargo Area)** is used when an occupant is in the fifth or higher numbered seat row, in an unenclosed area where no defined seating exists or using a fold-down type seat in its folded-down position. Examples include passenger riding in an open pickup bed, top of open double-decker bus, etc.

If seating in the vehicle is longitudinal rather than lateral, use the basic idea of a vehicle interior being divided laterally into roughly equal thirds and visualize lateral rows of seats to determine what seat position is the best descriptor.

For rearward facing seats, use the basic idea described in the previous paragraph to describe the occupant's seat position.

If a seat row has more than three designated seat positions, the occupants should have their positions assigned as usual for the left and right positions, while the two center positions would be entered as Other (i.e., **18 (Front Seat, Other)**, **28 (Second Seat, Other)**, **38 (Third Seat, Other)**, **48 (Fourth Seat, Other)**, or **51 (Other Passenger in Enclosed Passenger or Cargo Area)**) depending upon the seat row.

### **Guidance for NCSA Body Type 80-90**

For [NCSA BODY TYPE 80-90](#) (e.g., Motorcycles, ATV/ATC) enter the driver as **11 (Front Seat, Left Side)**; sidecar passengers as **13 (Front Seat, Right Side)**; any seated passengers behind the driver as **21 (Second Seat, Left Side)**, and a passenger on the lap of the driver (in front of) as **11 (Front Seat, Left Side)**. **55 (Riding on Exterior of Vehicle)** is applicable to a motorcycle or ATC occupant riding on the fenders or handlebars.

**54 (Trailing Unit)** is used when an occupant is in or on a trailing unit (i.e., [VEHICLE TRAILING](#), for this occupant's vehicle must be coded  $\geq 1$ , one or more trailing units).

**55 (Riding on Exterior of Vehicle)** is used when an occupant is riding on a fender, the boot of a convertible, etc.

**56 (Appended to a Motor Vehicle for Motion)** is used when this person is appended to the motor vehicle at the onset of the unstabilized situation *with the intention of using the motor vehicle's motion to initiate movement or to gain propulsion, momentum, speed, etc.* (e.g., "skitching"). The person may be appended by any means (hand grasp, tow rope, etc.), and could be using a non-motorist device (bicycle, skateboard, hoverboard, sled, etc.) at, and during, the time they appended to the Motor Vehicle for the purpose of motion. It must be clear that they were appended at the onset of the unstabilized situation. This code excludes people riding on the roof, trunk, hood, tailgate, etc., which should be coded as SEATING POSITION [55 \(Riding on Exterior of Vehicle\)](#).

If the case material does not show the seating row of a passenger and there is no other information about seating position, (e.g., in the narrative/diagram), then use **98 (Not Reported)**.

**98 (Not Reported)** Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used if the investigating officer indicates that this occupant's seating position is unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>THEN</b>                                       |

Figure 27: Seating Positions for Different Vehicle Configurations

## P10 - Restraint System Use

**FORMAT:** Subfield 1: 2 numeric; Subfield 2: 1 numeric

**SAS NAME:** Person.REST\_USE, Person.REST\_MIS

**ELEMENT VALUES:**

### Subfield 1 - Type of Restraint System in Use

| Codes | Attributes                                              |
|-------|---------------------------------------------------------|
| 20    | <a href="#">None Used/Not Applicable</a>                |
| 03    | <a href="#">Shoulder and Lap Belt Used</a>              |
| 01    | <a href="#">Shoulder Belt Only Used</a>                 |
| 02    | <a href="#">Lap Belt Only Used</a>                      |
| 06    | <a href="#">Racing-Style Harness Used</a>               |
| 08    | <a href="#">Restraint Used - Type Unknown</a>           |
| 10    | <a href="#">Child Restraint System - Forward Facing</a> |
| 11    | <a href="#">Child Restraint System - Rear Facing</a>    |
| 12    | <a href="#">Booster Seat</a>                            |
| 04    | <a href="#">Child Restraint - Type Unknown</a>          |
| 97    | <a href="#">Other</a>                                   |
| 98    | <a href="#">Not Reported</a>                            |
| 99    | <a href="#">Reported as Unknown</a>                     |

### Subfield 2 - Any Indication of Mis-Use?

| Codes | Attributes                                 |
|-------|--------------------------------------------|
| 7     | <a href="#">None Used/Not Applicable</a>   |
| 0     | <a href="#">No Indication of Mis-Use</a>   |
| 1     | <a href="#">Yes, Indication of Mis-Use</a> |

**Definition:** This element records the restraint equipment in use by the occupant and any indication of mis-use of the available restraint system, at the time of the crash.

**Remarks:** This element excludes occupants of motor vehicles with [NCSA BODY TYPE](#) 80-84, 88-91. Occupants of motor vehicles such as autocycles, ROVs, and go-karts may use a belt restraint system along with a helmet. For occupants of these vehicles, record both P10 RESTRAINT SYSTEM USE and [P11 HELMET USE](#). This applies even if the State only requires and records helmet use.

### ***Subfield 1: Type of Restraint System in Use***

**Definition:** This subfield records the restraint system in use by the occupant at the time of the crash.

**Remarks:** For occupants using a restraint but using it improperly or the restraint is not appropriate for the person, record the applicable restraint used and identify mis-use in [Subfield 2](#). For examples, see the table [Subfield 1 and 2 Example Scenarios](#) below.

**20 (None Used/Not Applicable)** is used when the case material indicate that the occupant did not use a restraint. This includes situations where the occupant of that seat position did not use the available restraint, or that no restraint was available in the seat position of this occupant.

Also use this attribute for people who are riding in the sleeper section of the cab of a truck, for people who are riding on the exterior of the vehicle, and for people in unenclosed cargo areas, such as a bed of a pickup truck where a restraint would not be present to use, even if the corresponding police crash report field is blank.

**NOTE:** This element records the restraint equipment in use by the occupant. For code **20 (None Used/Not Applicable)**, the “Not Applicable” does not refer to items or equipment in use that are irrelevant to restraint use. For example, if this person was not in a [NCSA BODY TYPE](#) of [80-91](#), [96](#), or [97](#), and the PCR notes that this person was wearing a helmet or other protective/preventive equipment irrelevant to restraint use, then this does not answer the question of if this person was using a restraint or not. In this case, code this person as [98 \(Not Reported\)](#), because a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute for this element.

**03 (Shoulder and Lap Belt Used)** is used when the occupant is restrained by a standard 3-point shoulder belt and lap belt connected to a buckle.

**01 (Shoulder Belt Only Used)** is used when the occupant is restrained only by a shoulder belt.

**02 (Lap Belt Only Used)** is used when the occupant is restrained only by a lap belt.

**06 (Racing-Style Harness Used)** is used when the occupant restraint system in use consists of a 5-Point Seat Belt, 4-Point Latch Harness, 3-5-Point Race Harness, Off-Road Race Harness, 3-Point Non-Retractable Seat Belt, or other similar device rather than a 3-point shoulder and lap belt system.

**08 (Restraint Used - Type Unknown)** is used when the case material indicate that some type of restraint was in use, but the type of restraint is not clear.

**10 (Child Restraint System - Forward Facing)** is used when a child passenger is seated in a forward-facing child safety seat. This does not imply correct use or placement of the seat. **Codes 10, 11, 12, and 04 take precedence over other types of restraints.**

**11 (Child Restraint System - Rear Facing)** is used when a child passenger is seated in a rearward facing child safety seat. This does not imply correct use or placement of the seat. **Codes 10, 11, 12, and 04 take precedence over other types of restraints.**

**12 (Booster Seat)** is used when a child passenger is seated in a “belt-positioning seat” that positions a child on a vehicle seat to improve the fit of the child in a lap and shoulder seat belt system. This does not imply correct use or placement of the seat. **Codes 10, 11, 12, and 04 take precedence over other types of restraints.**

**04 (Child Restraint - Type Unknown)** is used when a child passenger is seated in a child safety seat; however, the type used (e.g., forward, rear, or booster, etc.) is not known. This does not imply correct use or placement of the seat. **Codes 10, 11, 12, and 04 take precedence over other types of restraints.**

**97 (Other)** is used when the case material indicated that some other type of restraint not listed was being used at the time of the crash.

If the case material does not show the restraint system of injured or uninjured driver or passengers and there is no other information about restraint system (e.g., in the narrative/diagram), then use [98 \(Not Reported\)](#).

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **97 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **98 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Not Reported)** *Check to see if [20 \(None Used/Not Applicable\)](#) or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when the case material indicate that the restraint system use was unknown for this vehicle occupant.

#### **Guidelines When Police and EMS/M.E. Differ:**

Occasionally, information from EMS personnel or medical examiners (M.E.) includes statements about protection/restraint use; for example, if EMS arrived and removed victims before police arrived or the M.E. reports definite indications of belt usage. If the PCR leaves RESTRAINT SYSTEM USE blank or is marked as Unknown, then the EMS/M.E. assessment may be used rather than coding [98 \(Not Reported\)](#) or [99 \(Reported as Unknown\)](#).

Rules of thumb are as follows, unless you have information to the contrary:

If the M.E./EMS report that a restraint was used but the Police report “NOT USED” or “UNKNOWN,” then accept the M.E./EMS assessment. On the other hand, if the M.E./EMS report “NOT USED” but the Police report that a restraint was used, then try to

verify the police assessment that a restraint was used. If the Police report that a restraint was used or was not used but the M.E./EMS report “UNKNOWN,” then accept the Police assessment.

The vehicle’s decoded VIN data provided in **RBIS** may be used as a source to assist in coding this element when paired with reported information on the police crash report. For example, the officer in the narrative reports that all occupants were “properly restrained” and the VIN identifies that the vehicle is equipped with lap and shoulder belts.

## **Subfield 2 Any Indication of Mis-use?**

**Definition:** This subfield indicates any mis-use of the available restraint system for this person.

### **Remarks:**

**7 (None Used/Not Applicable)** is used when [Subfield 1 Type of Restraint System in Use](#) is coded as [20 \(None Used/Not Applicable\)](#), [98 \(Not Reported\)](#), or [99 \(Reported as Unknown\)](#).

**0 (No Indication of Mis-Use)** is used when the case material positively indicate that the restraints were used properly by this person, when the case material identifies that the restraints were being used but don’t indicate any mis-use (i.e., an absence of information regarding mis-use), or when the case material report that the restraints were being used but it is unknown if the restraints were mis-used by this person. Do not use this attribute when the restraints were not used (see [7 \(None Used/Not Applicable\)](#)).

**1 (Yes, Indication of Mis-use)** is used when the case material indicate that the restraints were mis-used at the time of the crash. An indication of **1 (Yes)** requires a positive response in the case material. Do not use this attribute when the restraints were not used (see [7 \(None Used/Not Applicable\)](#)).

## **Subfield 1 and 2 Example Scenarios**

| Scenario                                                                                                                                                    | Restraint System Use                         | Mis-use |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|---------|
| Automatic shoulder harness and a manual belt were available. The shoulder harness was used but the lap belt was not.                                        | 01 (Shoulder Belt Only Used)                 | 1 (Yes) |
| “Safety Belt” is checked on the PCR. It is not known what this represents and no clarification in the narrative. No mention of mis-use.                     | 08 (Restraint Used - Type Unknown)           | 0 (No)  |
| 3-point lap and shoulder belt was available, and the driver had the shoulder belt portion of the seatbelt behind his back.                                  | 02 (Lap Belt Only Used)                      | 1 (Yes) |
| Two people are secured in one 3-point lap and shoulder belt.                                                                                                | 03 (Shoulder and Lap Belt Used)              | 1 (Yes) |
| A child was in a booster seat but not using the vehicle’s restraint system.                                                                                 | 12 (Booster Seat)                            | 1 (Yes) |
| The child restraint system was properly secured to the vehicle in the forward-facing position; however, the child was not using the 5-point harness system. | 10 (Child Restraint System - Forward Facing) | 1 (Yes) |

| Scenario                                                                                                                       | Restraint System Use              | Mis-use |
|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|---------|
| A 1-year-old child is in the center back seating position without a child seat and using just a lap belt.                      | 02 (Lap Belt Only Used)           | 1 (Yes) |
| The investigating officer states the child restraint system was not properly secured in the vehicle. No clarification on type. | 04 (Child Restraint Type Unknown) | 1 (Yes) |
| 3-point lap and shoulder belt was available, and the driver was sitting on the lap belt portion of the seatbelt.               | 01 (Shoulder Belt Only Used)      | 1 (Yes) |

**Consistency Checks ([See Section 400](#)):**

| Error ID | IF                                                                                                                               | THEN                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## P11 - Helmet Use

**FORMAT:** Subfield 1: 2 numeric; Subfield 2: 1 numeric

**SAS NAME:** Person.HELM\_USE, Person.HELM\_MIS

**ELEMENT VALUES:**

### Subfield 1 - Helmet Use

| Codes | Attributes                                                         |
|-------|--------------------------------------------------------------------|
| 20    | <a href="#">Not Applicable</a>                                     |
| 17    | <a href="#">No Helmet</a>                                          |
| 05    | <a href="#">DOT-Compliant Motorcycle Helmet</a>                    |
| 16    | <a href="#">Helmet, Other than DOT-Compliant Motorcycle Helmet</a> |
| 19    | <a href="#">Helmet, Unknown if DOT-Compliant</a>                   |
| 98    | <a href="#">Not Reported</a>                                       |
| 99    | <a href="#">Reported as Unknown if Helmet Worn</a>                 |

### Subfield 2 - Any Indication of Mis-Use?

| Codes | Attributes                                 |
|-------|--------------------------------------------|
| 7     | <a href="#">None Used/Not Applicable</a>   |
| 0     | <a href="#">No Indication of Mis-Use</a>   |
| 1     | <a href="#">Yes, Indication of Mis-Use</a> |

**Definition:** This element records the helmet use, and any indications of mis-use of the helmet, by motor vehicle occupants of [NCSA BODY TYPES](#) 80-91, 96, and 97 at the time of the crash.

**Remarks:** Motorcycle helmets that are compliant with Federal Motor Vehicle Safety Standards typically weigh approximately 3 lbs, have an inner liner at least one-inch thick of firm polystyrene foam, have an inside label that states the manufacturer, model, and date of manufacture, and have a DOT sticker on the back of the helmet.

Occupants of motor vehicles such as autocycles, ROVs, and go-karts may use a belt restraint system along with a helmet. For occupants of these vehicles, record both [P10 RESTRAINT SYSTEM USE](#) and [P11 HELMET USE](#). This applies even if your State only requires and records helmet use.

### **Subfield 1: Helmet Use**

**Definition:** This subfield records the helmet use by motor vehicle occupants of [NCSA BODY TYPES](#) 80-91, 96, and 97 at the time of the crash.

## Remarks:

**20 (Not Applicable)** is used when the case material indicate that this person was an occupant of a motor vehicle with a [NCSA BODY TYPE](#) other than 80-91, 96, or 97.

**17 (No Helmet)** is used when the case material indicate that the occupant was not wearing a helmet.

**05 (DOT-Compliant Motorcycle Helmet)** is used when the case material indicate this occupant was wearing a motorcycle helmet that is compliant with Federal Motor Vehicle Safety Standards. It must be specifically indicated to be “DOT-Compliant” in the case material to code this attribute, otherwise use [19 \(Helmet, Unknown if DOT-Compliant\)](#).

**16 (Helmet, Other than DOT-Compliant Motorcycle Helmet)** is used when the case material indicate this occupant was wearing a motorcycle helmet that is not a DOT-compliant helmet. This also would include bicycle helmets, skateboard helmets, and novelty helmets.

**19 (Helmet, Unknown if DOT-Compliant)** is used when the case material indicate this occupant was wearing a motorcycle helmet, but the case material does not identify if it is a DOT-compliant motorcycle helmet.

**98 (Not Reported)** is used if the case material does not show the helmet use of injured or uninjured driver or passengers and there is no other information about helmet use (e.g., in the narrative/diagram). *Check to see if [20 \(Not Applicable\)](#) or [99 \(Reported as Unknown if Helmet Worn\)](#) is more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Helmet Worn)** is used when the case material indicate that helmet use was unknown for this person.

## Guidelines When Police and EMS/M.E. Differ:

Occasionally, information from EMS personnel or medical examiners (M.E.) includes statements about helmet use. For example, if EMS arrived and removed victims before police arrived or the M.E. reports definite indications of helmet usage. If the PCR leaves HELMET USE blank or is marked as Unknown, then the EMS/M.E. assessment may be used rather than coding [98 \(Not Reported\)](#) or [99 \(Reported as Unknown if Helmet Worn\)](#).

**Rules of thumb are as follows, unless you have information to the contrary:**

If the M.E./EMS report that a helmet was used but the Police report “NOT USED” or “UNKNOWN,” then accept the M.E./EMS assessment. On the other hand, if the M.E./EMS report “NOT USED” but the Police report that a helmet was used, then try to verify the police assessment that a helmet was used. If the Police report that a helmet was used or was not used but the M.E./EMS report “UNKNOWN,” then accept the Police assessment.

**Subfield 2 Any Indication of Mis-Use?**

**Definition:** This subfield records any indications of mis-use of the helmet used by motor vehicle occupants of [NCSA BODY TYPES](#) 80-91, 96, and 97 at the time of the crash.

**Remarks:**

**7 (None Used/Not Applicable)** is used when the case material indicate that this person was an occupant of a motor vehicle with a [NCSA BODY TYPE](#) other than 80-91, 96, or 97, or when an occupant of a vehicle with a [NCSA BODY TYPE](#) of 80-91, 96, or 97 was coded in [Subfield 1 as 17 \(No Helmet\)](#), [98 \(Not Reported\)](#), or [99 \(Reported as Unknown if Helmet Worn\)](#).

**0 (No Indication of Mis-Use)** is used when the case material positively indicate that the helmet was used properly by this person, when the case material identifies that the helmet was being used but don’t indicate any mis-use (i.e., an absence of information regarding mis-use), or when the case material report that the helmet was being used but it is unknown if the helmet was mis-used by this person. Do not use this attribute when the helmet was not used (see [7 \(None Used/Not Applicable\)](#)). Using an inappropriate type of helmet (e.g., wearing a bicycle helmet while riding a motorcycle) is not by itself an indication of mis-use.

**1 (Yes, Indication of Mis-Use)** is used when the case material indicate that the helmet was mis-used at the time of the crash. An indication of 1 (Yes) requires a positive response in the case material. Do not use this attribute when the helmet was not used (see [7 \(None Used/Not Applicable\)](#)). Using an inappropriate type of helmet (e.g., wearing a bicycle helmet while riding a motorcycle) is not by itself an indication of mis-use.

**Example:**

The investigating officer states the operator of the motorcycle had the helmet on backwards.

**Consistency Checks ([See Section 400](#)):**

## P12 - Air Bag Deployed

**FORMAT:** 2 numeric

**SAS NAME:** Person.AIR\_BAG

**ELEMENT VALUES:**

| Codes | Attributes                                           |
|-------|------------------------------------------------------|
| 01    | <a href="#">Deployed-Front</a>                       |
| 02    | <a href="#">Deployed-Side (door, seatback)</a>       |
| 03    | <a href="#">Deployed-Curtain (roof)</a>              |
| 07    | <a href="#">Deployed-Other (knee, airbelt, etc.)</a> |
| 08    | <a href="#">Deployed-Combination</a>                 |
| 09    | <a href="#">Deployment-Unknown Location</a>          |
| 20    | <a href="#">Not Deployed</a>                         |
| 98    | <a href="#">Not Reported</a>                         |
| 99    | <a href="#">Reported as Deployment Unknown</a>       |

**Definition:** This element is used to record air bag deployment for this person as reported in the case material.

**Remarks:** Code this element regardless of the motor vehicle's [NCSA BODY TYPE](#) or the age of the motor vehicle. When an air bag deployment is reported somewhere in the vehicle, and the narrative or other case material does not specify/clarify a seating position or occupant associated with the deployment, then code [98 \(Not Reported\)](#) is applied.

### Air Bag(s) Deployed for This Seat Position

[01 \(Deployed-Front\)](#), [02 \(Deployed-Side\)](#), [03 \(Deployed-Curtain\)](#), [07 \(Deployed-Other\)](#), [08 \(Deployed-Combination\)](#), and [09 \(Deployment-Unknown Location\)](#) are used only if you have indication in the available information that an air bag deployed for this occupant's seat position (not for others in the vehicle.) There may be multiple air bags available for this occupant's seat position.

[01 \(Deployed-Front\)](#), [02 \(Deployed-Side\)](#), [03 \(Deployed-Curtain\)](#), and [07 \(Deployed-Other\)](#) are used if case material indicate that an air bag deployed for this person from only one of these locations.

**01 (Deployed-Front)** refers to an air bag forward of a first-row occupant. The driver frontal air bag is located in the hub of the steering wheel. The right front passenger frontal air bag is located in the dashboard (instrument panel).

**02 (Deployed-Side (door, seatback))** refers to an air bag mounted in the outboard side of the seat or in the door. Side impact air bags located between [seating positions](#) 11 and 13 within the inboard seatbacks or center console designed to mitigate occupant versus occupant injury are also collected in this attribute.

In a [convertible body type](#), a head impact curtain may deploy upward from the top of the door panel near the lower edge of the side glazing. This type of head protection is coded [03 \(Deployed-Curtain \(roof\)\)](#), even though the air bag is located in the side door panel.

**03 (Deployed-Curtain (roof))** refers to a head only, side impact air bag for outboard occupants. These are usually mounted in the roof rail above the side windows, deploying between the glazing and the occupant. These look like a curtain when deployed and are designed to help protect an adult's head in a side-impact crash. This includes a head impact curtain in a [convertible car body type](#), which deploys upward from the door panel near the lower edge of the side glazing. A single curtain may cover one or all rows, or, a vehicle may have one for the first row with another covering multiple rearward rows.

The narrative may refer to these as a rollover curtain, roof bag, roof-rail bag, roof curtain, anti-ejection curtain, or a safety canopy. These rollover curtains are a special type of side curtain air bag with sensors that measure vehicle tilting and protect occupants from injury and ejection during a rollover crash.

**07 (Deployed-Other (knee, airbelt, etc.))** is used if the case material indicate the air bag type that deployed is other than the ones listed above. If multiple "other" types of air bags deploy, use code [08 \(Deployed-Combination\)](#) for this person.

**Examples include:**

- Inflatable Seat Belt/Airbelts - Inflatable seat belts are currently available for outboard passengers beyond the first row. Some airbelts will deploy in either front or side collisions.
- Rear Impact Curtain - This curtain helps protect the last row occupants during a rearward impact.
- Knee Air Bags/Knee Bolsters –This deploys from the lower instrument panel/dashboard.
- Anti-slide/Anti-submarine/Seat Cushion Air Bag - This inflates in the seat cushion to help maintain the occupant's seating position.

**08 (Deployed-Combination)** is used if case material indicate that multiple air bags *of different types* deployed for this seat position.

**09 (Deployment-Unknown Location)** is used if an air bag did deploy for this seat position, but the origin of the air bag is not known.

**20 (Not Deployed)** is used if the available information indicates that no air bags deployed for this seat position.

This includes when the case material indicate there was no air bag available for this person. Crash Report terms that might be encountered include the following: Not Applicable, No Air Bag, Not Equipped, Not Present, None, Not Available/Unavailable, Not Installed, or Prior Deployment - Not Replaced.

**98 (Not Reported)** *Check to see if 20 (Not Deployed) or [99 \(Reported as Deployment Unknown\)](#) is more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).
3. When an air bag deployment is reported somewhere in the vehicle and the narrative or other case material does not specify/clarify a seating position or occupant associated with the deployment, then code 98 (Not Reported) is applied.

**99 (Reported as Deployment Unknown)** is used if the investigating officer indicates that deployment of an air bag was unknown for this person or for the vehicle and there is no further information in the case material.

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>THEN</b>                                          |

## P13 - Ejection

**FORMAT:** 1 numeric

**SAS NAME:** Person.EJECTION

**ELEMENT VALUES:**

| Codes | Attributes                                     |
|-------|------------------------------------------------|
| 0     | <a href="#">Not Ejected</a>                    |
| 1     | <a href="#">Totally Ejected</a>                |
| 2     | <a href="#">Partially Ejected</a>              |
| 3     | <a href="#">Ejected - Unknown Degree</a>       |
| 7     | <a href="#">Not Reported</a>                   |
| 8     | <a href="#">Not Applicable</a>                 |
| 9     | <a href="#">Reported as Unknown if Ejected</a> |

**Definition:** This element describes the ejection status and degree of ejection for this person, excluding motorcycle occupants.

**Remarks:** Ejection refers to situations where forces from a crash cause occupants to be totally or partially thrown from the vehicle (including the bed of pickup trucks) during the course of the crash. This includes occupants of jeeps, go carts, snowmobiles, three- or four-wheel ATVs.

**Note:** This variable excludes occupants of motorcycles.

Partial ejection refers to those instances where some part but not all of an occupant's body is, at some time during the crash sequence, outside the occupant compartment.

**0 (Not Ejected)** is used if the case material specifically so state for a given occupant.

If the case material does not show the ejection status of uninjured drivers or passengers, and there is no other information about ejection (e.g., in the narrative/diagram), then use [7 \(Not Reported\)](#).

**1 (Totally Ejected)** is used when the occupant's body is entirely outside the vehicle but may be in contact with the vehicle. This includes occupants who are not initially in the seating compartment of the vehicle (e.g., pickup beds, boot of a convertible, and people riding on open tailgates).

**2 (Partially Ejected)** refers to those instances where some part but not all of an occupant's body is, at some time during the crash sequence, outside the occupant compartment. This does not apply to occupants who are not initially in the seating compartment of the vehicle (e.g., pickup beds, boot of a convertible, and people riding on open tailgates), since any ejection for them is coded as [1 \(Totally Ejected\)](#).

**3 (Ejected - Unknown Degree)** is used when the case material indicate that an occupant is ejected but fails to discriminate between total and partial ejection.

**7 (Not Reported)** *Check to see if [0 \(Not Ejected\)](#) or [9 \(Reported as Unknown if Ejected\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **7 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**8 (Not Applicable)** is used for people who are riding on or appended to by any means (hand grasp, tow rope, etc.) the exterior of a vehicle or for motorcycle occupants. Exterior of the vehicle includes running boards, roof, fenders, and bumpers, but not the bed of pickup trucks, open tailgate, or boot of a convertible.

**9 (Reported as Unknown if Ejected)** is used when the case material specifically indicate unknown.

Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | THEN                          |

## P14 - Ejection Path - FARS Only

**FORMAT:** 1 numeric

**SAS Name:** Person.EJ\_PATH

### ELEMENT VALUES:

| Codes | Attributes                                           |
|-------|------------------------------------------------------|
| 0     | <a href="#">Ejection Path Not Applicable</a>         |
| 1     | Through Side Door Opening                            |
| 2     | Through Side Window                                  |
| 3     | Through Windshield                                   |
| 4     | Through Back Window                                  |
| 5     | Through Back Door/Tailgate Opening                   |
| 6     | Through Roof Opening (sunroof, convertible top down) |
| 7     | Through Roof (convertible top up)                    |
| 8     | Other Path (e.g., back of pickup truck)              |
| 9     | <a href="#">Ejection Path Unknown</a>                |

**Definition:** This element identifies the path by which this person was [ejected](#) from the vehicle.

### Remarks:

**0 (Ejection Path Not Applicable)** is used when the element [EJECTION](#) is coded **0 (Not Ejected)**, **7 (Not Reported)**, **8 (Not Applicable)**, or **9 (Unknown if Ejected)**. This attribute is an autofill in *RBIS*.

**9 (Ejection Path Unknown)** is used for **ejected** occupants when:

1. No field or coding block exists on the State's crash report to provide information to code ejection path AND no other information is available to code the element (e.g., narrative, diagram, case material); or
2. a field or coding block exists on the State's crash report that would provide the information needed to code ejection path, but it has been left blank, AND no other information is available to code the element (e.g., narrative, diagram, case material); or
3. the police indicate ejection path is unknown.

**Use the following table as a guideline:**

| Path                      | Guideline                                        |
|---------------------------|--------------------------------------------------|
| Through side door opening | all side doors                                   |
| Through side window       | all side windows, bus side windows               |
| Through windshield        | front windshield only                            |
| Through back window       | standard rear window, back window of bronco, van |

| <b>Path</b>                        | <b>Guideline</b>                                                     |
|------------------------------------|----------------------------------------------------------------------|
| Through back door/tailgate opening | station wagon tailgate, back door of truck, back door of bronco, van |
| Through roof opening               | (sunroof, convertible top down) t-top, targa top                     |
| Through roof                       | (convertible top up)                                                 |
| Other path                         | (back of pickup truck) torn-off roof, car cut in half                |
| Ejection Path Unknown              | driver's side, unspecified; passenger's side unspecified             |

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                      | <b>THEN</b>                   |
|-----------------|--------------------------------|-------------------------------|
| BA0P            | EJECTION equals 0, 7, 8, or 9, | EJECTION PATH must equal 0.   |
| BB0P            | EJECTION equals 1-3,           | EJECTION PATH must equal 1-9. |

## P15 - Extrication - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Person.EXTRICAT

### ELEMENT VALUES:

| Codes | Attributes                                       |
|-------|--------------------------------------------------|
| 0     | <a href="#">Not Extricated or Not Applicable</a> |
| 1     | <a href="#">Extricated</a>                       |
| 9     | <a href="#">Unknown</a>                          |

**Definition:** This element identifies if *equipment was* used to remove this person from the vehicle.

**Remarks:** Extrication refers to the use of *equipment to* remove people from the vehicles, i.e., more than just lifting or carrying person out of wreckage.

**0 (Not Extricated or Not Applicable)** is used if there is no reason to believe an occupant was extricated. Do not assume **0 (Not Extricated or Not Applicable)** when the officer references “pinned,” “wedged,” or “trapped.” See [9 \(Unknown\)](#). This field is not applicable to motorcycle and ATV/ATC riders (*NCSA BODY TYPES 80-84, 88, 89, 90*).

**1 (Extricated)** is used when the police officer uses the word “extricated” to indicate occupant removal. Use of the term “extricated” is sufficient information to use **1 (Extricated)** even if no mention of equipment is made. The only exception to this is if the analyst knows the officer used the term “extrication” not as intended for the purpose of this element. If the officer uses the term “pinned” or “wedged” or something similar, then the officer must indicate that equipment was used to remove the occupant in order to code attribute **1 (Extricated)**.

**9 (Unknown)** is to be used when the officer states that the occupant is “pinned” or “wedged,” etc., and suggests that the occupant may have been removed with force but does not make it clear whether equipment was used or not.

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>THEN</b>                      |

## P16/NM16 - Police Reported Alcohol Involvement

**FORMAT:** 1 numeric

**SAS NAME:** Person.DRINKING

**ELEMENT VALUES:**

| Codes | Attributes                                |
|-------|-------------------------------------------|
| 0     | <a href="#">No (Alcohol Not Involved)</a> |
| 1     | <a href="#">Yes (Alcohol Involved)</a>    |
| 8     | <a href="#">Not Reported</a>              |
| 9     | <a href="#">Reported as Unknown</a>       |

**Definition:** This data element reflects only **the judgment of law enforcement** as to whether alcohol was involved or not for this person.

**Remarks:** The phrase “alcohol involved” means that alcohol is present in the person or presumed to be present **by the police**. Consequently, this data element may not agree with the alcohol test results for this person. ***This data element excludes interpretation of lab test results by the analyst/coder unless those results are provided by law enforcement either directly or included on the crash report form.*** Involvement is not an indication that alcohol was in any way a cause of the crash.

If the case material indicate that open or unopened alcoholic beverages were found in the vehicle, then this information does not by itself constitute involvement unless the police indicate that this was the basis for a determination of involvement. If the case material indicate that a preliminary breath test (PBT) was given and the officer’s judgment contradicts the preliminary test, the officer’s judgment will be the determining factor.

**0 (No [Alcohol Not Involved])** applies if **the judgment of law enforcement** is that alcohol is not present in this person.

In some circumstances, it is possible for the police to give sufficient information in the report fields (such as contributing circumstances, driver/pedestrian condition, alcohol presence or use, alcohol test, etc.) or narrative to indicate that they believe alcohol is not involved without specifically mentioning “no” alcohol. In such cases, use **0 (No [Alcohol Not Involved])**. However, if there is any question that the officer’s position on alcohol involvement is “no alcohol” because of lack of information, then use [8 \(Not Reported\)](#).

**1 (Yes [Alcohol Involved])** applies only if **the judgment of the law enforcement** is that alcohol was present in this person. For example, the police indicate alcohol involvement via:

- a specific data element on the police report form such as Driver Condition,
- the police charge the driver with an alcohol-related offense,
- the police mention in the narrative section of the report that the person had been drinking,
- the police report has a positive **blood alcohol concentration (BAC)** test result (BAC>.00).

Some police crash reports have a block labeled “Alcohol/Drugs.” If use is indicated, and it cannot be determined which was used (narrative, arrest/charged section, etc.), **use code 8 (Not Reported)**. If the police report indicates that a driver was charged with DWI/DUI (driving while intoxicated, driving while impaired or driving under the influence), and no clarification is offered to indicate if the DWI/DUI was alcohol related or other drug related (e.g., a specific data element; mentioned in the narrative section; **blood alcohol concentration** results), then **use code 8 (Not Reported)**.

**8 (Not Reported)** applies when law enforcement makes no mention of alcohol involvement in either narrative or data fields. For example, there is a specific location on the police report for assessment of alcohol, but the investigating officer fails to make either a positive or negative assessment by leaving the field blank. Also use **8 (Not Reported)** if no block exists on the police crash report for reporting alcohol presence and no other information is available. **Check to see if 0 (No [Alcohol Not Involved]) or 9 (Reported as Unknown) are more appropriate for the situation.**

*Most States' practice is that passengers are not routinely assessed for the presence of alcohol or drugs. Consequently, for passengers when there is no other information regarding alcohol or drugs, use 8 (Not Reported).*

**Ordering a test is not the same as reporting involvement.** There are instances when the police do not indicate in the police crash report whether alcohol was involved or not, but they do mention that a test was given or ordered. For example, the police may only say that an evidential test was ordered for a driver without indicating that they suspected alcohol or providing a result. The use of passive alcohol sensors (PAS) may also be mentioned as used by the police, without mention of the result. Use **8 (Not Reported)** for these instances.

**9 (Reported as Unknown)** applies when law enforcement indicates in either narrative or data fields that alcohol involvement is “unknown” for this person. In general, crash reports have blocks to indicate either positive or negative alcohol involvement. However, if a crash report has a provision for the investigating officer to respond, “unknown involvement,” then enter this attribute.

#### **FARS SPECIAL INSTRUCTION:**

##### **Important Guidelines:**

- Do not change the coding of this element because a positive alcohol test is obtained from the coroner, medical examiner, or State toxicology lab. A positive or negative BAC test submitted from the toxicology lab or coroner directly to the FARS analyst is not evidence of the officer’s judgment.
- The police crash report, including any supplemental reports or direct contact with the police are the only valid sources.

When Police-Reported Alcohol Involvement is **8 (Not Reported)** or **9 (Reported as Unknown)**, **METHOD OF ALCOHOL BY POLICE DETERMINATION** attributes “1-8” are allowed. However, this should only happen when the method is stated by the police, but the involvement is not mentioned at all or stated as unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                    | <b>THEN</b>                                                                                                                            |

| 9     | <a href="#">Not Reported</a>                           |

**Definition:** This element describes **the method by which the police made the determination** as to whether alcohol was involved or not for this person.

**Remarks:** This variable is coded for each person involved in the crash. The police crash report and supplements are the source of information.

The purpose of this variable is to record the method by which the police made the determination in [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) as to whether alcohol was involved or not.

It is used primarily when the [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) variable is coded as [0 \(No \[Alcohol Not Involved\]\)](#) or [1 \(Yes \[Alcohol Involved\]\)](#).

Whenever [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [0 \(No \[Alcohol Not Involved\]\)](#), try to find out how the police knew this. When Police-Reported Alcohol Involvement is [1 \(Yes \[Alcohol Involved\]\)](#), try to determine how the police knew this.

If [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#), then METHOD OF ALCOHOL DETERMINATION BY POLICE is [9 \(Not Reported\)](#). If more than one method is used by the police to determine alcohol involvement, choose the method the police refer to when they record their assessment. If more than one method is used and they do not state which method was the basis for their alcohol determination, code the highest-ranking method used from the hierarchy (the highest ranking is “1”; the lowest is “5”).

**1 (Evidential Test [Breath, Blood, Urine])** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [0 \(No \[Alcohol Not Involved\]\)](#) or [1 \(Yes \[Alcohol Involved\]\)](#) and the police indicate that they ordered an evidential test and their determination of alcohol involvement was based on the results of that test.

An evidential test can be a breath test on a State-approved breath test device, a blood test, or a urine test. No other tests are considered evidential.

***Ordering a test is not the same as knowing the results of that test.***

In order to code that the police determined their opinion based on an evidential test, there must be information that the officer had received the test results. If they haven't received test results (e.g., results are pending), then their method of determination of alcohol or drug presence was made using some method other than an evidential test.

**2 (Preliminary Breath Test [PBT])** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is **0 (No [Alcohol Not Involved])** or **1 (Yes [Alcohol Involved])** and the police indicate that alcohol involvement was based upon the results of a preliminary breath test, or PBT. Preliminary breath testing devices are not yet considered evidential tests, but merely as tools for the police to help them determine whether alcohol is present or not. Many PBTs only indicate whether alcohol is present in the breath bypass (green) or fail (red) lights. Other PBTs indicate the approximate BAC in numbers. Some PBTs are of evidential quality in some States. But if the device was used only as a preliminary test and not the evidential test, then this value should be coded.

The key to coding this is the definite indication **by the police** that a PBT **was used** and was the basis (or the clinching evidence) that a driver had been drinking or not.

**3 (Standard Field Sobriety Test)** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is **0 (No [Alcohol Not Involved])** or **1 (Yes [Alcohol Involved])** and the police indicate that the basis for that alcohol assessment was the behavior by the driver during a Standard Field Sobriety Test (SFST).

Examples of SFSTs include the horizontal gaze nystagmus (HGN) test, walking-in-a-straight-line test, one-leg-stand test, etc. **Do not confuse 3 (Standard Field Sobriety Test) with 5 (Observed).**

**4 (Passive Alcohol Sensor [PAS])** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is **0 (No [Alcohol Not Involved])** or **1 (Yes [Alcohol Involved])** and the police indicate that alcohol involvement was based upon the results of a passive alcohol sensor, or "sniffer."

The PAS devices available and in use by police are devices that look like flashlights and when held within 6 inches of the driver's mouth will detect alcohol in the breath while the driver is talking. The PAS is not considered an evidential test nor a PBT. It is not really a test, but a detector or an extension of the police officer's senses. The PAS devices are usually PASS/FAIL indicators with a red-light indicating alcohol on the breath.

The key to coding this attribute is the indication by the police that a PAS was used and was the basis for coding **0 (No [Alcohol Not Involved])** or **1 (Yes [Alcohol Involved])** for [POLICE-REPORTED ALCOHOL INVOLVEMENT](#).

**5 (Observed)** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is **0 (No [Alcohol Not Involved])** or **1 (Yes [Alcohol Involved])** and the police indicate that the basis for their alcohol assessment was some observation of the driver. Do not confuse **5 (Observed)** with **3 (Standard Field Sobriety Test)**.

### Examples of observations would be:

- Smelling alcohol on the driver's breath.
- Staggering, slurring of speech.
- The driver admitting he had been drinking.
- Other observations described by the police that would **not** be considered field sobriety tests.

Be careful not to simply assume that this is the appropriate code when some other method may have been used (e.g., breath test, PBT, PAS).

**8 (Other [e.g., Saliva test])** is used if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [0 \(No \[Alcohol Not Involved\]\)](#) or [1 \(Yes \[Alcohol Involved\]\)](#) and the police indicate that the basis for alcohol determination was something other than the codes “1, 2, 3, 4, and 5” described above.

### Examples of Other methods include:

1. Results of a saliva test.
2. Results of other tissue tests.

The key to coding this attribute is the description by the police of some other method of alcohol determination that does not fall into codes “1-5.”

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **8 (Other [e.g., Saliva test])** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **9 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**9 (Not Reported)** is coded if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#). It is also coded if [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is [0 \(No \[Alcohol Not Involved\]\)](#) or [1 \(Yes \[Alcohol Involved\]\)](#) and there is no indication in the police report or any documents as to how the police made the alcohol assessment.

### Witness Statements:

Witness Statements may or may not be used by the police to make a determination of alcohol involvement. See clarification on the use of information provided by witnesses in section [103. Data Sources](#). If the police did use witness statements alone to make a determination of alcohol involvement, use [8 \(Other\)](#).

If the police mention, but did not use witness statements and there is no other indication of how a determination was made, use [9 \(Not Reported\)](#).

There are instances when the police do not indicate in the police crash report whether alcohol was involved or not, but they do mention that a test was given or ordered.

**FOR EXAMPLE:** The police may only say that an evidential test was ordered for a driver without indicating that they suspected alcohol or what the result was. The use of passive alcohol sensors (PAS) may also be mentioned as used by the police, without mention of the result.

**Codes 1-8** may be used for METHOD OF ALCOHOL DETERMINATION BY POLICE when [POLICE-REPORTED ALCOHOL INVOLVEMENT](#) is coded as [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#), if this fits the case.

This should only happen when the method is stated by the police, but the involvement is not mentioned at all or stated as unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                               | <b>THEN</b>                                                                                                                                   |

| 995     | <a href="#">Not Reported</a>                          |
| 999     | <a href="#">Reported as Unknown if Tested</a>         |

**Definition for Alcohol Test Status:** This element identifies if an alcohol (ethanol) test was given to this person.

**Definition for Alcohol Test Type:** This element identifies the type of the alcohol (ethanol) test that was used for this person.

**Definition for Alcohol Test Result:** This element identifies the alcohol (ethanol) test result for this person.

**Remarks:** When completing this element, you must have the data to fill **ALL** three subfields. Otherwise, leave all three subfields **blank** until all the data has been acquired to complete all three subfields. An ante mortem **blood alcohol concentration** result (live person) is always preferred over a postmortem **blood alcohol concentration** result (deceased person).

For alcohol tests that were initiated but not completed because of a contaminated or insufficient sample, code:

- Test Status as [2 \(Test Given\)](#),
- the applicable Test Type, and
- code Test Results as [997 \(AC Test Performed, Results Unknown\)](#).

In a circumstance where the crash report provides results from a lower order test (e.g., breath or urine) and blood was also drawn to be tested, but blood test results will not be received, it is preferred that we record the known result from the breath or urine test rather than **997 (AC Test Performed, Results Unknown)**.

#### **Guidance on crash reported values indicating Test Refused:**

Code all three Subfields as **8/95/995 (Not Reported)**, unless there is clear indication that a test was subsequently performed ([2 \(Test Given\)](#)) or not performed ([0 \(Test Not Given\)](#)). Also, select RELATED FACTORS-DRIVER LEVEL [060 \(Alcohol and/or Drug Test Refused\)](#), RELATED FACTORS-PERSON (MV OCCUPANT) LEVEL [010 \(Alcohol and/or Drug Test Refused\)](#), or RELATED FACTORS-PERSON (NOT A MV OCCUPANT) LEVEL [010 \(Alcohol and/or Drug Test Refused\)](#) anytime it is indicated on the crash report that testing was refused, regardless of subsequent testing.

### **Subfield 1 - Test Status**

Indicates whether a test was performed on this person to detect the presence of alcohol (ethanol) or not.

**0 (Test Not Given)** is used when the case material indicate an alcohol test was not given.

**NOTE:** Most States' practice is that "live" non-drivers are not routinely tested for alcohol. Consequently, for live non-drivers **RBIS** will auto-fill Test Status, Test Type, and Test Result as **0 (Test Not Given)**. If you happen to obtain an alcohol test result for a "live" non-driver, enter **Test Status** as **2 (Test Given)** and the appropriate test type and results.

**2 (Test Given)** is used when the case material indicate an alcohol test was given.

**8 (Not Reported)** *Check to see if 0 (Test Not Given) or 9 (Reported as Unknown if Tested) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown if Tested)** is used when the case material specifically indicated "Unknown if Tested."

### **Subfield 2 - Test Type**

#### **Coding Hierarchy:**

*For all living patients, the hierarchy for preferred specimen is breath followed by blood. This is mainly for the timing of the test; breath testing is most likely to happen in close proximity to the time of the motor vehicle crash. For living patients, all other specimen locations (vitreous, liver, etc.) are not used.*

*For all post-mortem testing, specimen location should be verified. This is important to ensure the most accurate test is recorded. Unlike living patients, the accuracy of results is dependent on the site of the specimen. The preferred location for alcohol testing in the deceased is vitreous, followed by blood from femoral vein, then subclavian vein, and finally, heart blood. At the bottom of the hierarchy for sites of specimen testing in the deceased are liver, urine, and "other."*

When more than one alcohol test exists, use the following hierarchy for Test Type:

***Alcohol Testing in Living Patients:***

**1. Breath Test Types**

- [02 \(Breath Test \(AC\)\)](#) or Evidential Breath Test
- [\(Preliminary Breath Test \(PBT\)\)](#) See [Note](#)
- [\(Breath Test, Unknown Type\)](#)

**2. Blood Test Types**

- [01 \(Blood\)](#) or Whole Blood
- 05 (Blood Plasma)\*
- 05 (Blood Serum)\*
- 06 (Blood Clot)\*

***Alcohol Testing in Deceased Patients:***

**1. Other Test Types**

- 04 (Vitreous)\*

**2. Blood Test Types**

*Collection location hierarchy for deceased blood collection. Note: Location of blood collection takes priority over type of blood specimen (whole blood, clot, or plasma).*

1. Femoral Vein
2. Subclavian Vein
3. Heart

- [01 \(Blood\)](#) or Whole Blood
- 06 (Blood Clot)\*
- 05 (Blood Plasma)\*

**3. Other Test Types**

- [03 \(Urine\)](#)
- 07 (Liver)\*
- [08 \(Other Test Type\)](#)

**\*Attributes 04 - 07 do not apply for CRSS coding purposes.**

***Note Regarding Preliminary Breath Tests:***

The rationale is that a PBT will be performed on a live subject prior to any other test type and, therefore, will automatically be closer in time to the crash. If a PBT was performed on-scene while a blood test was performed much later on a live subject, then the PBT is preferred. If the blood test is performed on a sample that is drawn at the scene or close to the crash time, whether the subject is living or dead, then the usual procedure applies to update a PBT result with an evidential blood test result (See [10 \(Preliminary Breath Test\)](#) below). Without information to

determine which type of breath test reported the results, (i.e., only “breath” test is reported) code [11 \(Breath Test, Unknown Type\)](#).

In a circumstance where the crash report identifies results from a test (e.g., urine or other) but blood was also drawn to be tested, but blood test results will not be received, it is preferred that we record the known result from the urine or other test rather than [997 \(AC Test Performed, Results Unknown\)](#).

The same is correct in a circumstance where you have information that casts clear doubt on the validity or reliability of the blood test, and you have results from a test of another type. For example, the blood test was spoiled or contaminated.

**01 (Blood)** is used when the case material indicate this was the type of test used to obtain a ***blood alcohol concentration***.

Note that there are test types for **01 (Blood)**, **05 (Blood Plasma/Serum)**, and **06 (Blood Clot)**. If the coroner, medical examiner, or State lab reports that the test was a “blood” test (whole blood), this most likely does not refer to blood plasma, blood serum, or blood clot, but you should try to verify this. If the test was performed on blood, or if you know the results are already converted to a BAC, then code TEST TYPE as **01 (Blood)**.

**02 (Breath Test [AC])** is used when the case material indicate this was the type of test used to obtain a ***blood alcohol concentration***.

**02 (Breath Test [AC])** is used if you have a result from an **evidential** breath test (a breath test performed on a State-approved breath test device).

Evidential breath test devices may be stationary or portable (handheld).

Usually, results from a [PBT device](#) are not considered evidential. These are always handheld devices. If the device was used only as a preliminary test and not an evidential test, then do not use code **02 (Breath Test [AC])**. Without information to determine which type of breath test reported the results, (i.e., only “breath” test is reported) code [11 \(Breath Test, Unknown Type\)](#).

**03 (Urine)** is used when the case material indicate this was the type of test used to obtain a ***blood alcohol concentration***.

**08 (Other Test Type)** is used when the case material indicate a type of test used to obtain a ***blood alcohol concentration*** was recorded as “Other” or is indicated to be of a type other than the available attributes. This attribute would not apply to behavioral tests (field sobriety) or observations.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **08 (Other Test Type)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code [95 \(Not Reported\)](#) if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**10 (Preliminary Breath Test [PBT])** is used when the case material indicate this was the type of test used to obtain a **BAC** and no other test is available. Update **Test Type** and corresponding **Result** if a PBT is followed by an evidential test, other than a PBT. A negative result from a PBT (no alcohol detected) is coded as **000**. Without information to determine which type of breath test reported the results, (i.e., only “breath” test is reported) code **11 (Breath Test, Unknown Type)**.

**11 (Breath Test, Unknown Type)** is used when the case material indicate that a breath test was administered, but it cannot be determined from the case material whether it was a preliminary test or an evidential test.

**98 (Unknown Test Type)** is used when the case material indicate a test was given and the type of test is reported as unknown or pending and the type is unobtainable. ***This attribute should also be used in cases where test results are given, but it cannot be determined which specimen was used in obtaining the results (e.g., blood/urine).***

**95 (Not Reported)** Check to see if [0 \(Test Not Given\)](#) or [99 \(Reported as Unknown if Tested\)](#) are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **95 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Tested)** is used when the case material specifically indicated “Unknown if Tested.”

### **Subfield 3 - Test Result**

**000-939 (Actual Value)** All three decimal places should be coded in this field. Blood, urine, and vitreous test results should be represented as **g/dL** (North American standard). If three decimal places are not available, code the first two digits and zero fill the remaining place. For example, a reported ***blood alcohol concentration*** of .09 becomes .090. ***If more than three decimal places are provided, then truncate the results to three decimal places. Do not round test results. For example, a reported BAC of .0279 becomes .027.***

**Example Test Results Are in g/dL**

| <b>g/dL</b> | <b>Translate to g/dL with 3 digits</b> | <b>Record in FARS/CRSS</b> |
|-------------|----------------------------------------|----------------------------|
| .2 g/dL     | .200 g/dL                              | 200                        |
| .17 g/dL    | .170 g/dL                              | 170                        |

**Example Test Results Are in mg/dL (1mg = .001g)**

| mg/dL (1mg = .001g) | Translate to g/dL with 3 digits | Record in FARS/CRSS |
|---------------------|---------------------------------|---------------------|
| 86 mg/dL            | .086 g/dL                       | 086                 |
| 140 mg/dL           | .140 g/dL                       | 140                 |

**Example Test Results Are in Other or No Units**

| Other Units            | Translate to g/dL with 3 digits | Record in FARS/CRSS |
|------------------------|---------------------------------|---------------------|
| .08 is considered g/dL | .080                            | 080                 |
| .1% is considered g/dL | .100                            | 100                 |

**997 (AC Test Performed, Results Unknown)** refers to alcohol content tests that were performed but the results are reported as unknown or pending and are unobtainable (includes a “Contaminated Sample” or “Insufficient Sample”). AC Test Performed, Results Unknown can be used for any Test Type.

**FARS SPECIAL INSTRUCTION:**

As a general coding guideline, **do not** prematurely use Test Result “AC Test Performed, Results Unknown.” It is recommended that you leave the information blank for drivers and non-motorists until the test results are received from the State lab, coroner, or police. You need to be reasonably certain that you will **never** receive the test results to use attribute “**997**” at the time of the initial coding and case entry.

**995 (Not Reported)** Check to see if [0 \(Test Not Given\)](#) or [999 \(Reported as Unknown if Tested\)](#) are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **995 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**999 (Reported as Unknown if Tested)** is used when the case material specifically indicate “Unknown if Tested.”

**998 (Positive Reading with No Actual Value)** can be used for any Test Type code where the result is indicated to be positive without a numeric value to record. This should only be used

when a final test result is returned as “positive” with no actual result to record. This can occur when a screening test is used, and it is the only test result available. This attribute is also used for a positive **BAC** expressed as a range or as less than some specific value (e.g., less than .020 g/100ml).

Some portable (handheld) breath-test devices are only Preliminary Breath Tests (PBTs) and indicate whether alcohol is present in the breath by positive (green) or negative (red) lights. Other portable breath test devices indicate the approximate **blood alcohol concentration** in numbers. When a PBT result only indicates “positive” for alcohol, with no actual **blood alcohol concentration** value, **998 (Positive Reading with No Actual Value)** should be used. A negative PBT result should be interpreted as **.000**.

Before recording this value make sure that this is the appropriate value based on the [hierarchy](#) outlined under [Subfield 2 Test Type](#).

### State Law Versus Practice:

You may be aware that your State laws require testing of certain classes of crash victims. However, you may also know that the practice in your State is that the law is not observed. In such cases, you are not bound only by what the law says. You may consider State practices in your coding decisions.

**Example 1:** Your State law may require all fatalities to be tested for **blood alcohol concentration**, but you know that this does not happen in your State and you are unable to locate alcohol test information for this person:

- In such a case, you cannot rely on the law for your coding decisions. Therefore, you should use [999 \(Reported as Unknown If Tested\)](#) rather than [997 \(AC Test Performed, Results Unknown\)](#), or **996 (Test Not Given)**. (Test Status equals [9 \(Reported as Unknown if Tested\)](#) and Test Type equals [99 \(Reported as Unknown if Tested\)](#)).

**Example 2:** Most States’ practice is that “live” non-drivers are not routinely tested for alcohol. Consequently, for live non-drivers when there is no mention of a test ordered by the police in the police crash report:

- Code Test Status as **0 (Test Not Given)** and **RBIS** will auto-fill Test Type as **00 (Test Not Given)** and Test Result as **996 (Test Not Given)**. However, if you happen to obtain an alcohol test result later, you may enter the appropriate test type and results.

### Computed Estimates of Blood Alcohol Concentration:

An expert may calculate an estimate of what the **blood alcohol concentration** would have been at the time of the crash (i.e., toxicologist uses the lapse time from crash and the victim's weight to calculate the **blood alcohol concentration**). You may accept these results if the following are **all** true:

- results were reported by someone with the authority in your State to make this determination; and
- the result is considered official in your State; and
- you can support the result with official documentation, or it is reported on the police crash report (may vary from State-to-State).

### Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                      | <b>THEN</b>                                                                                                                            |
|-----------------|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 5T7P            | ALCOHOL TEST STATUS equals 0,                                                                  | ALCOHOL TEST TYPE must equal 00, and ALCOHOL TEST RESULT must equal 996.                                                               |
| 5T8P            | ALCOHOL TEST STATUS equals 9,                                                                  | ALCOHOL TEST TYPE must equal 99, and ALCOHOL TEST RESULT must equal 999.                                                               |
| 5T9P            | ALCOHOL TEST STATUS equals 2,                                                                  | ALCOHOL TEST TYPE must equal 01-11, 95, 98, and ALCOHOL TEST RESULT must equal 000-940, 997, 998.                                      |
| 5TCP            | ALCOHOL TEST STATUS equals 8,                                                                  | ALCOHOL TEST TYPE must equal 95, and ALCOHOL TEST RESULT must equal 995.                                                               |
| P071            | PERSON TYPE equals 02, 04-07, 10, <b>11, 12, or 13</b> , and INJURY SEVERITY does not equal 4, | ALCOHOL TEST STATUS should not equal 9, ALCOHOL TEST TYPE should not equal 99, and ALCOHOL TEST RESULT should not equal 999.           |
| P074            | PERSON TYPE equals 02, 04-07, 10, <b>11, 12, or 13</b> , and INJURY SEVERITY does not equal 4, | ALCOHOL TEST STATUS must not equal 8, ALCOHOL TEST TYPE must not equal 95, and ALCOHOL TEST RESULT must not equal 995.                 |
| <b>P076</b>     | <b>ALCOHOL TEST Subfield 2 - Test Type equals 02, 10, or 11,</b>                               | <b>POLICE REPORTED ALCOHOL INVOLVEMENT should not equal 8 or 9, and METHOD OF ALCOHOL DETERMINATION BY POLICE should equal 1 or 2.</b> |
| <b>P077</b>     | <b>INJURY SEVERITY equals 4, and DIED AT SCENE/EN ROUTE equals 7 or 8,</b>                     | <b>ALCOHOL TEST Subfield 2 - Test Type should not equal 02, 10, or 11.</b>                                                             |
| P300            | POLICE REPORTED ALCOHOL INVOLVEMENT equals 1, and INJURY SEVERITY equals 4,                    | ALCOHOL TEST STATUS should not equal 0.                                                                                                |

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                         | <b>THEN</b>                                    |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|

## P19/NM19 - Police Reported Drug Involvement

**FORMAT:** 1 numeric

**SAS NAME:** Person.DRUGS

**ELEMENT VALUES:**

| Codes | Attributes                              |
|-------|-----------------------------------------|
| 0     | <a href="#">No (Drugs Not Involved)</a> |
| 1     | <a href="#">Yes (Drugs Involved)</a>    |
| 8     | <a href="#">Not Reported</a>            |
| 9     | <a href="#">Reported as Unknown</a>     |

**Definition:** This data element reflects only **the judgment of law enforcement** as to whether drugs were involved or not for this person.

**Remarks:** This data element reflects only **the judgment of law enforcement** as to whether drugs were involved or not for this person.

The phrase “drug involvement” means that drugs are present in the person or presumed to be present by the police. ***Consequently, this data element may not agree with the drug test results for this person. This data element excludes interpretation of lab test results by the analyst/coder unless those results are provided by law enforcement either directly or included on the crash report form.*** This includes prescription and over-the-counter medications, as well as illicit substances (marijuana, cocaine, heroin, etc.). It is not an indication that the drug usage was in any way a cause of the crash.

If case material indicate that drugs were found in the vehicle, then this information does not by itself constitute involvement unless the police indicate that this was the basis for a determination of involvement.

Some police crash reports have a block labeled “Alcohol/Drugs.” If use is indicated, and it cannot be determined which was used (narrative, arrest/charged section, etc.), **use code [8 \(Not Reported\)](#)**. If the police report indicates that a driver was charged with DWI/**DUI** (driving while intoxicated, driving while impaired, **or driving under the influence**) and no clarification is offered to indicate if the DWI/**DUI** was alcohol related or **other** drug related (e.g., a specific data element, mentioned in the narrative section, **blood alcohol concentration** results), then **use code [8 \(Not Reported\)](#)**.

**0 (No [Drugs Not Involved])** applies if the judgment of law enforcement is that drugs are not present in this person.

In some circumstances, it is possible for the police to give sufficient information in the report fields (such as contributing circumstances, driver/pedestrian condition, substance use, drug test, etc.) or narrative to indicate that they believe drugs are not involved without specifically mentioning no drugs. In such cases, you may use **0 (No [Drugs Not Involved])**. However, if there is any question that the officer’s position on drug involvement is No because of a lack of information, then it is best to use **[8 \(Not Reported\)](#)**.

**1 (Yes [Drugs Involved])** applies only if the police assessment is that drugs were present in this person. For example, the police indicate drug involvement via:

- a specific data element on the police report form such as Driver Condition,
- the police charge the driver with a drug-related offense,
- the police mention in the narrative section of the report that the person had been under the influence of a drug,
- the police report has a positive test result reported for drugs.

**8 (Not Reported)** applies when law enforcement makes no mention of drug involvement in either narrative or data fields. For example, there is a specific location on the police report for assessment of drugs, but the investigating officer fails to make either a positive or negative assessment by leaving the field blank. Also, use **8 (Not Reported)** if no block exists on the police crash report for reporting drug presence and no other information is available. *Check to see if [0 \(No \[Drugs Not Involved\]\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation.*

*Most States' practice is that passengers are not routinely assessed for the presence of alcohol or drugs. Consequently, for passengers when there is no other information regarding alcohol or drugs, use 8 (Not Reported).*

**Ordering a test is not the same as reporting involvement.** There are instances when law enforcement does not indicate in the police crash report whether drugs were involved or not, but they do mention that a test was given or ordered. For example, the police may only say that an evidential test was ordered for a driver without indicating that they suspected drugs or providing a result. Use **8 (Not Reported)** for these instances.

**9 (Reported as Unknown)** applies when law enforcement indicates in either narrative or data fields that drug involvement is “unknown” for this person. In general, police reports have blocks to indicate either positive or negative drug involvement. However, if a crash report has a provision for the investigating officer to respond “unknown involvement,” then enter this attribute.

#### **FARS SPECIAL INSTRUCTION:**

##### **Important Guidelines:**

- Do not change the coding of this element because a positive drug test is obtained from the coroner, medical examiner, or State toxicology lab. A positive or negative test result submitted from the toxicology lab or coroner directly to the FARS analyst is **not** evidence of the officer’s judgment.
- The crash report, including any supplemental reports or direct contact with law enforcement, are the only valid sources.

When POLICE REPORTED DRUG INVOLVEMENT is [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#), all [METHOD OF DRUG DETERMINATION](#) attributes are allowed. However, this should only happen when the method is stated by the police, but the involvement is not mentioned at all or stated as unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                       | <b>THEN</b>                                                                                                          |

## P20/NM20 - Method of Drug Determination by Police - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Person.DRUG\_DET

**ELEMENT VALUES:**

| Codes | Attributes                                                   |
|-------|--------------------------------------------------------------|
| 1     | <a href="#">Evidential Test (Blood, Urine)</a>               |
| 2     | <a href="#">Drug Recognition Expert (or Evaluator) (DRE)</a> |
| 3     | <a href="#">Observed Behavior or SFST</a>                    |
| 7     | <a href="#">Other</a>                                        |
| 8     | <a href="#">Not Reported</a>                                 |

**Definition:** This element identifies **the method by which the police made the determination** as to whether drugs were involved or not for this person.

**Remarks:** This element is coded for each person involved in the crash. The police crash report and supplements are the source of information.

The purpose of this element is to record the method by which the police made the determination as to whether drugs were involved or not.

It is used primarily when the [POLICE REPORTED DRUG INVOLVEMENT](#) element is coded as [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#).

Whenever [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#), try to find out how the police knew this. When [POLICE REPORTED DRUG INVOLVEMENT](#) is [1 \(Yes \[Drugs Involved\]\)](#), try to determine how the police knew this.

If [POLICE REPORTED DRUG INVOLVEMENT](#) is [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#), then Method of Drug Determination by Police is [8 \(Not Reported\)](#). If more than one method is used by the police to determine drug involvement, choose the method the police refer to when they record their assessment. If more than one method is used and they do not state which method was the basis for their determination, code the highest-ranking method used from the hierarchy (the highest ranking is “1”; the lowest is “7”).

[1 \(Evidential Test \[Blood, Urine\]\)](#) is used if [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#) and the police indicate that they ordered an evidential test and their determination of drug involvement was based on the results of that test.

**Ordering a test is not the same as knowing the results of that test.** In order to code that the police determined their opinion based on an evidential test, there must be information that the officer had received the test results. If they haven’t received test results (e.g., results are pending), then their method of determination of alcohol or drug presence was made using some method other than an evidential test.

**2 (Drug Recognition Expert (or Evaluator) (DRE))** is used if [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#) and the police indicate that drug involvement was based upon the results of expert opinion of a person trained to recognize impairment in drivers under the influence of drugs other than, or in addition to, alcohol.

The key to coding this attribute is the definite indication **by the police** that a **DRE was used** and was the basis (or the clinching evidence) that a driver had been using drugs or not.

**3 (Observed Behavior or SFST)** is used if [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#) and the police indicate that the basis for that drug assessment was the behavior by the driver during their contact with the person such as an SFST.

**7 (Other)** is used if [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#) and the police indicate that the basis for Drug determination was something other than the codes “1, 2, or 3” described above.

Examples of **7 (Other)** include:

1. Observations of drugs or drug use paraphernalia,
2. Detecting the odor of marijuana, and
3. Admission by the person that they used drugs.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **7 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **8 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**8 (Not Reported)** is coded if [POLICE REPORTED DRUG INVOLVEMENT](#) is [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#). It is also coded if [POLICE REPORTED DRUG INVOLVEMENT](#) is [0 \(No \[Drugs Not Involved\]\)](#) or [1 \(Yes \[Drugs Involved\]\)](#) and there is no indication in the police report or any documents as to how the police made the drug assessment.

### ***Witness Statements:***

Witness Statements may or may not be used by the police to make a determination of drug involvement. If the police did use witness statements alone to make a determination of drug involvement, use [7 \(Other\)](#). See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

If the police mention, but did not use witness statements and there is no other indication of how a determination was made, use [8 \(Not Reported\)](#).

There are instances when the police do not indicate in the police crash report whether drugs were involved or not, but they do mention that a test was given or ordered.

FOR EXAMPLE: The police may only say that an evidential test was ordered for a driver without indicating that they suspected drugs or what the result was.

Codes 1-7 may be used for METHOD OF DRUG DETERMINATION BY POLICE when [POLICE REPORTED DRUG INVOLVEMENT](#) is coded as [8 \(Not Reported\)](#) or [9 \(Reported as Unknown\)](#), if this fits the case.

This should only happen when the method is stated by the police, but the Involvement is not mentioned at all or stated as unknown.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                                       | <b>THEN</b>                                               |

\* [See Specific Drug Listings](#)

\*\* Test result does not include aspirin, nicotine, or ethanol. Alcohols reported other than ethanol would be classified under [996 \(Other Drug\)](#).

**Remarks:** When completing this element, you must have the data to fill **ALL** three subfields. Otherwise, leave all three subfields **blank** until all the data has been acquired to complete all three subfields.

For drug tests that were initiated but not completed because of a contaminated or insufficient sample, code:

- Test Status as [2 \(Test Given\)](#),
- the applicable [Specimen](#), and
- code Test Results as [997/Tested for Drugs, Results Unknown](#).

#### **Guidance on crash reported values indicating Test Refused:**

Code all three Subfields as **8/96/095 (Not Reported)**, unless there is clear indication that a test was subsequently performed ([2 \(Test Given\)](#)) or not performed ([0 \(Test Not Given\)](#)). Also, select RELATED FACTORS-DRIVER LEVEL [060 \(Alcohol and/or Drug Test Refused\)](#), RELATED FACTORS-PERSON (MV OCCUPANT) LEVEL [010 \(Alcohol and/or Drug Test Refused\)](#), or RELATED FACTORS-PERSON (NOT A MV OCCUPANT) LEVEL [010 \(Alcohol and/or Drug Test Refused\)](#) anytime it is indicated on the crash report that testing was refused, regardless of subsequent testing.

#### **Subfield 1 - Drug Test Status**

**Definition for Drug Test Status:** This element identifies if a chemical test for the presence of drugs was given to this person.

**0 (Test Not Given)** is used when the case material indicate a drug test was not given. If Test Status is **0 (Test Not Given)** then Specimen and Test Result will also be **00 (Test Not Given)** and **000 (Test Not Given)**.

Most States' practice is that "live" non-drivers are not routinely tested for drugs. Consequently, for live non-drivers **RBIS** will auto-fill **Test Status**, **Specimen**, and **Test**

**Result as Test Not Given.** If you happen to obtain a drug test result for a “live” non-driver, enter **Test Status** as **2 (Test Given)** and the appropriate specimen and results.

**2 (Test Given)** is used when the case material indicate at least one specimen was tested for drugs.

**8 (Not Reported)** Check to see if **0 (Test Not Given)** or **9 (Reported as Unknown if Tested)** are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown if Tested)** is used when the case material specifically indicate “Unknown if Tested.”

### ***Subfield 2 - Drug Specimen***

You may record all reported toxicology lab specimen and **their corresponding results.**

**Definition for Drug Specimen:** This element identifies the bodily tissue or fluid used to perform a chemical test for the presence of drugs in this person.

**01 (Whole Blood)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

Note that there are samples for **01 (Whole Blood)**, **11 (Blood Plasma/Serum)**, and **12 (Blood Clot)**. If the coroner, medical examiner, or State lab reports that the test was a “blood” test (whole blood), this most likely does not refer to blood plasma, blood serum, or blood clot, but you should try to verify this.

**02 (Urine)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**11 (Blood Plasma/Serum)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**12 (Blood Clot)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**13 (Oral Fluids)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**14 (Vitreous)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**15 (Liver)** is used when the case material indicate this was the specimen used to detect the presence of drugs.

**97 (Unknown Specimen)** is used when the case material indicate a test was given and the specimen is reported as unknown or pending and unobtainable. ***This attribute should also be used in cases where test results are given, but it cannot be determined which specimen was used in obtaining the results (e.g., blood/urine).***

**98 (Other Specimen)** is used when the case material indicate a specimen used to detect the presence of drugs other than the available attributes.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **98 (Other Specimen)** if the police crash report attribute choices can be matched to or include all the attributes in FARS.
2. Code **96 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS.

**96 (Not Reported)** Check to see if 00 (Test Not Given) or 99 (Reported as Unknown if Tested) are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **96 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Tested)** is used when the case material specifically indicate “Unknown if Tested.”

### ***Subfield 3 - Drug Test Result***

**Definition for Drug Test Result:** This element records the result of a chemical test for the presence of drugs in this person.

**\*\*NOTE: This element excludes Nicotine, Aspirin and Ethanol.** Alcohols reported other than ethanol would be classified under 996 (Other Drug).

**NOTE:** You may record as many separate drug test results and their corresponding specimen as are reported. Use the translation table to assign the three-digit code. If the drug is not on the list, use 996 (Other Drug). Caffeine and mild analgesics are coded 996 (Other Drug).

**000 (Test Not Given)** is used when the case material indicate a drug test was not given. If Test Status is **0 (Test Not Given)** then Specimen and Test Result will also be **00 (Test Not Given)** and **000 (Test Not Given)**.

**001 (Tested, No Drugs Found/Negative)** is used when the case material indicate that a test for the presence of drugs was “negative” or that no drugs were found.

**997 (Tested for Drugs, Results Unknown)** refers to drug tests that were performed but the results are reported as unknown or pending and are unobtainable. **997 (Tested for Drugs, Results Unknown)** can be used for any Specimen.

**NOTE: As a general coding guideline, do not prematurely use Test Result 997 (Tested for Drugs, Results Unknown).** It is recommended that you leave the information **blank** until the test results are received from the State lab, M.E., coroner, or police. You need to be reasonably certain that you will never receive the test results to use code “997” at the time of the initial coding and case entry. Examples of this situation would be if the test results are returned indicating a “Contaminated Sample” or “Insufficient Sample.”

**998 (Tested for Drugs, Drugs Found, Type Unknown/Positive)** can be used for any Specimen code where the result is indicated to be positive without an actual drug identified to record. This value may be used more than once to record multiple substances found.

**NOTE:** This should only be used when a final test result is returned as “positive” with no actual result to record. This can occur when a test is used to identify the presence of any one of several substances without identifying which substances are presumed present and this is the only test result available. Before recording this value make sure that this is the **final** test result.

**095 (Not Reported)** *Check to see if [000 \(Test Not Given\)](#) or [999 \(Reported as Unknown if Tested\)](#) are more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **095 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**999 (Reported as Unknown if Tested for Drugs)** is used when the case material specifically indicate “Unknown if Tested.”

### Examples for Interpreting Drug Tests

| IF YOU HAVE:                                                                                                                             | Status | Specimen<br>1 | Result<br>1 | Specimen<br>2 | Result<br>2 | Specimen<br>3 | Result<br>3 | Specimen<br>4 | Result<br>4 |
|------------------------------------------------------------------------------------------------------------------------------------------|--------|---------------|-------------|---------------|-------------|---------------|-------------|---------------|-------------|
| Blood and urine tests and the results are the same for both. Example: Blood - Fentanyl; Urine - Fentanyl                                 | 2      | 01            | 151         | 02            | 151         |               |             |               |             |
| Blood and urine tests and the results are different for both. Example: Blood - Hexobarbital, Benzoyllecgonine, Morphine; Urine - Cocaine | 2      | 01            | 333         | 01            | 402         | 01            | 177         | 02            | 407         |
| Both blood and urine tests and the results are given but not linked to either tests. Example: Results - Codeine and Ibogaine             | 2      | 97            | 128         | 97            | 509         |               |             |               |             |
| Blood and vitreous tests. Example: Blood - Diazepam; Vitreous - Cocaine                                                                  | 2      | 01            | 321         | 14            | 407         |               |             |               |             |
| Urine test only and the results: Example: Urine - Benzodiazepines                                                                        | 2      | 02            | 304         |               |             |               |             |               |             |
| Oral Fluid Test only. Example: Oral Fluid - Amphetamine                                                                                  | 2      | 13            | 401         |               |             |               |             |               |             |
| Not tested for drugs.                                                                                                                    | 0      | 00            | 000         |               |             |               |             |               |             |
| Not Reported for drugs                                                                                                                   | 8      | 96            | 095         |               |             |               |             |               |             |
| Reported as Unknown if tested for drugs.                                                                                                 | 9      | 99            | 999         |               |             |               |             |               |             |
| Tested for Drugs, Results Unknown. Example: Blood test - Yes; Results - Unavailable                                                      | 2      | 01            | 997         |               |             |               |             |               |             |
| Tested for Drugs, Drugs Found, Type of Drug Unknown. Example: Urine test - Yes; Drugs found - Yes                                        | 2      | 02            | 998         |               |             |               |             |               |             |
| Both Whole Blood and Urine Tests, one negative and one positive. Example: Blood - Negative; Urine - Benzoyllecgonine                     | 2      | 01            | 001         | 02            | 402         |               |             |               |             |

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                   | <b>THEN</b>                                                                                                                                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Drug                                               | Code       |
|----------------------------------------------------|------------|
| <b>Acetaminophen + Codeine</b>                     | <b>100</b> |
| Acetorphine                                        | 101        |
| Acetyl-alpha-methylfentanyl                        | 102        |
| Acetyldihydrocodeine                               | 103        |
| Acetylmethadol                                     | 104        |
| Aerosols (hydrocarbon)                             | 940        |
| Alfentanil                                         | 105        |
| Allylprodine                                       | 106        |
| Alpha, Beta-dihydroxy-alpha-androstane             | 828        |
| Alphacetylmethadol                                 | 220        |
| Alpha-Ethyltryptamine                              | 523        |
| Alpha-meprodine                                    | 109        |
| Alpha-methyl-alpha-beta-dihydroxy-alpha-androstane | 829        |
| Alpha-methyl-beta-beta-dihydroxy-alpha-androstane  | 830        |
| Alpha-methyl-beta-beta-dihydroxy-androstene        | 831        |
| Alpha-methyl-delta 1-dihydrotestosterone           | 832        |
| Alpha-Methylfentanyl                               | 107        |
| Alpha-methyl-hydroxynandrolone                     | 833        |
| Alphamethylthiofentanyl                            | 108        |
| Alpha-methyltryptamine                             | 534        |
| Alphamethadol                                      | 110        |
| Alphaprodine                                       | 111        |
| Alprazolam                                         | 300        |
| Aminorex                                           | 428        |
| Amobarbital                                        | 301        |
| Amobarbital & non-controlled active ingred.        | 378        |
| Amobarbital suppository dosage form                | 388        |
| Amphetamine                                        | 401        |

| Drug                                  | Code       |
|---------------------------------------|------------|
| Amphetamine Sulfate                   | 400        |
| Amphetamine Variants                  | 500        |
| Amyl Nitrite                          | 921        |
| Anabolic Steroid, Type Unknown        | 895        |
| Androstanedione                       | 834        |
| Androstenediol                        | 835        |
| Androstenedione                       | 836        |
| Anesthetic Gases                      | 920        |
| Anileridine                           | 112        |
| APC + Codeine                         | 113        |
| Aprobarbital                          | 379        |
| Aspirin + Codeine                     | 114        |
| <b>Barbital</b>                       | <b>302</b> |
| Barbiturates                          | 303        |
| Barbituric Acid Derivative            | 380        |
| Benzethidine                          | 115        |
| Benzodiazepines                       | 304        |
| Benzoylecgonine                       | 402        |
| Benzphetamine                         | 403        |
| Benzylfentanyl                        | 305        |
| Benzylmorphine                        | 117        |
| Beta, beta-dihydroxy-alpha-androstane | 837        |
| Beta-hydroxy-3-methylfentanyl         | 221        |
| Beta-hydroxyfentanyl                  | 118        |
| Beta-meprodine                        | 120        |
| Betacetylmethadol                     | 119        |
| Betamethadol                          | 121        |
| Betaprodine                           | 122        |
| Bezitramide                           | 123        |
| Bolasterone                           | 838        |
| Boldenone                             | 800        |
| Bromo-dimethoxyamphetamine            | 524        |

| Drug                           | Code       |
|--------------------------------|------------|
| Bromo-dimethoxyphenethylamine  | 525        |
| Bromazepam                     | 306        |
| Bufotenine                     | 501        |
| Buprenorphine                  | 124        |
| Butabarbital (secbutabarbital) | 307        |
| Butalbital                     | 308        |
| Butobarbital (butethal)        | 389        |
| Butorphanol                    | 218        |
| Butly Nitrite                  | 923        |
| <b>Calusterone</b>             | <b>839</b> |
| Camazepam                      | 309        |
| “Cannabinoid, Type Unknown”    | 695        |
| Carbamate                      | 310        |
| Carfentanil                    | 125        |
| Carisoprodol                   | 376        |
| Cathine (Norpseudoephedrine)   | 404        |
| Cathinone                      | 429        |
| Chloral betaine                | 311        |
| Chloral Hydrate                | 312        |
| Chlordiazepoxide               | 313        |
| Chlorhexadol                   | 314        |
| Chloroform                     | 926        |
| Chlorotestosterone             | 801        |
| Chlorphentermine               | 405        |
| Clobazam                       | 315        |
| Clonazepam                     | 316        |
| Clonitazene                    | 126        |
| Clorazepate Dipotassium        | 317        |
| Clortermine                    | 406        |
| Clostebol                      | 827        |
| Clotiazepam                    | 318        |
| Cloxazolam                     | 319        |
| Coca Leaves                    | 430        |

| Drug                                           | Code       |
|------------------------------------------------|------------|
| Cocaine                                        | 407        |
| Codeine                                        | 128        |
| Codeine combination product 90 mg/du           | 240        |
| Codeine preparations - 200 mg/100 ml or 100 gm | 241        |
| Codeine & Isoquinoline                         | 222        |
| Codeine methylbromide                          | 127        |
| Codeine-N-oxide                                | 223        |
| Cyprenorphine                                  | 129        |
| <b>Dehydrochloromethyltestosterone</b>         | <b>803</b> |
| Delorazepam                                    | 320        |
| Delta 1-dihydrotestosterone                    | 840        |
| Delta 9                                        | 600        |
| “Depressants, Type Unknown”                    | 395        |
| Desomorphine                                   | 130        |
| Dexfenfluramine                                | 383        |
| Dextroamphetamine                              | 408        |
| Dextromoramide                                 | 131        |
| Dextropropoxyphene (dosage forms)              | 224        |
| Diampromide                                    | 133        |
| Diazepam                                       | 321        |
| Dichloralphenazone                             | 431        |
| Diethylpropion                                 | 409        |
| Diethylthiambutene                             | 134        |
| Diethyltryptamine (DET)                        | 503        |
| Difenoxin                                      | 135        |
| Difenoxin 1 mg/25ug AtSO4/du                   | 242        |
| Difenoxin preparations - 0.5 mg/25 ug AtSO4/du | 243        |
| Dihydrocodeine                                 | 136        |
| Dihydrocodeine combination product 90 mg/du    | 244        |

| Drug                                               | Code       |
|----------------------------------------------------|------------|
| Dihydrocodeine preparations 10 mg/100 ml or 100 gm | 245        |
| Dihydroetorphine                                   | 226        |
| Dihydromorphine                                    | 137        |
| Dihydrotestosterone                                | 804        |
| Dimenoxadol                                        | 138        |
| Dimepheptanol (Racemethadol)                       | 139        |
| Dimethoxyamphetamine (DMA)                         | 504        |
| Dimethoxyethylamphetamine                          | 535        |
| Dimethoxy-(n)-propyl-thiophenethylamine            | 536        |
| Dimethylthiambutene                                | 140        |
| Dimethyltryptamine (DMT)                           | 505        |
| Dioxaphetyl Butyrate                               | 141        |
| Diphenoxylate                                      | 142        |
| Diphenoxylate preparations 2.5 mg/25 ug AtSO4      | 246        |
| Dipipanone                                         | 143        |
| Diprenorphine                                      | 227        |
| Diprenorphine Hydrochloride                        | 144        |
| Dronabinol                                         | 507        |

| 8     | <a href="#">Not Reported</a>                         |
| 9     | <a href="#">Reported as Unknown</a>                  |

**Definition:** This element identifies the method of transportation this person was provided to receive treatment or be evaluated for a possible injury at the first hospital or medical facility.

**Remarks:** Medical Facility refers to an injury treatment facility (hospital, clinic, trauma center, etc.). The treatment facility is the first medical facility to which the person is taken. Use appropriate attribute, even if the person dies en route to the treatment facility. A morgue is not an injury treatment facility.

**0 (Not Transported *for Treatment*)** is used for victims who are dead on the scene and for those who are not taken (or do not go) to a treatment facility or hospital for treatment. For example, an uninjured occupant rides along with an injured person to a treatment facility. **0 (Not Transported *for Treatment*)** would be used if the person did not go to a treatment facility directly from the scene but was transported at a later time for injuries sustained in this crash. If the case material states the person was transported but does not specifically state that the transport was from the scene, then consider the person transported directly from the scene of the crash.

If a person is moved from the crash scene by emergency services personnel (EMS, rescue squad, fire department, law enforcement) as part of the transport process, consider the person as transported. For example, an injured person that is driven by emergency services to a location to be air lifted should be coded as **1 (EMS Air)**.

There can also be situations where a person leaves the crash scene (e.g., walks for help) or is moved from a crash scene by a party other than emergency services. For example, in a remote or inaccessible location a private citizen drives an injured person to an accessible location before obtaining help and acquiring emergency services assistance from this new location. Consider these situations as **0 (Not Transported *for Treatment*)** for treatment even if the person was eventually transported for treatment from this new location.

**1 (EMS Air)** includes any air transport device. This code would be used any time air transport was used for this person. For example, if there is an indication that both air and ground transportation were used, code **1 (EMS Air)**.

**5 (EMS Ground)** includes transport by private and county/city-owned ambulance or rescue squad vehicles.

**3 (EMS Unknown Mode)** is used when a person is transported to a treatment facility by EMS, but the mode of transportation is not known.

**2 (Law Enforcement)** includes transport by State, county, or local law enforcement agency vehicles.

**4 (Transported Unknown Source)** is used if you know the person was transported to a treatment facility, but you do not know the source.

**6 (Other)** includes transport by private citizens or individuals who drive themselves to the hospital or treatment facility. May be indicated on your crash report as “POV” (Privately/Personally Owned Vehicle).

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **6 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **8 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**8 (Not Reported)** Check to see if **0 (Not Transported for Treatment)** or **9 (Reported as Unknown)** are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when it is reported as “unknown” whether this victim was taken (or went) to a hospital/treatment facility for treatment or not.

**Consistency Checks [\(See Section 400\)](#):**

## P23/NM23 - Died at Scene/En Route - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Person.DOA

**ELEMENT VALUES:**

| Codes | Attributes                     |
|-------|--------------------------------|
| 0     | <a href="#">Not Applicable</a> |
| 7     | <a href="#">Died at Scene</a>  |
| 8     | <a href="#">Died En Route</a>  |
| 9     | <a href="#">Unknown</a>        |

**Definition:** This element identifies if this person died at the scene of the crash or en route to a hospital or treatment facility.

### Remarks:

**0 (Not Applicable)** is used for non-fatalities and victims dying at locations other than the scene or en route (hospital, at home, etc.).

**7 (Died at Scene)** is used for victims who are dead on the scene of the crash.

**8 (Died En Route)** is used for victims who die en route to a hospital or treatment facility by EMS or other transport.

**9 (Unknown)** is used when you know the victim is a fatality, but you don't know if they died at the scene, en route, or at another location (e.g., home).

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                                                  | THEN                                                                                               |

| P54P            | DIED AT SCENE/EN ROUTE equals 8,                   | EMS TIME AT HOSPITAL should not equal 8888, 9997, 9998.      |
| P55P            | TRANSPORTED TO FIRST MEDICAL FACILITY BY equals 9, | DIED AT SCENE/EN ROUTE must equal 0, 9.                      |
| P56P            | DIED AT SCENE/EN ROUTE equals 7,                   | DEATH TIME should be within 30 minutes of the CRASH TIME.    |

## P24/NM24 - Death Date - FARS Only

**FORMAT:** 2 sets of 2 numeric, 1 set of 4 numeric

**SAS NAME:** Person.DEATH\_DA, Person.DEATH\_MO, Person.DEATH\_YR

### ELEMENT VALUES:

#### Month:

| Codes | Attributes                 |
|-------|----------------------------|
| 88    | Not Applicable (Non-fatal) |
| 01-12 | Month of the Year          |
| 99    | Unknown                    |

#### Day:

| Codes | Attributes                 |
|-------|----------------------------|
| 88    | Not Applicable (Non-fatal) |
| 01-31 | Day of the Month           |
| 99    | Unknown                    |

#### Year:

| Codes | Attributes                 |
|-------|----------------------------|
| 8888  | Not Applicable (Non-fatal) |
| --    | Actual Year of Death       |
| 9999  | Unknown                    |

**Definition:** This element records the month, day, and year of this person's death.

**Remarks:** The death must occur within **thirty 24-hour time periods** from time of the crash in order to be an applicable FARS death.

This element, although it contains three pieces of information, should be treated as one element. Therefore, never leave any one portion blank when another is not.

Normally, the medical examiner or coroner is source of data for death date. If there are no data inconsistencies or errors, use the official death date as recorded on the death certificate. Do not change the official death date without good cause.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                           | <b>THEN</b>                                                                                          |

| 7V0F            | DEATH YEAR equals 9999,                                                                             | CRASH MONTH must not be 01-11.                                                                       |
| 8V0P            | DEATH YEAR equals 9999,                                                                             | DEATH MONTH and DEATH DAY must equal 99.                                                             |
| 9V0P            | DEATH MONTH equals 99,                                                                              | DEATH DAY must equal 99.                                                                             |
| P520            | CRASH DATE and DEATH DATE are the same, and CRASH TIME AND DEATH TIME are the same,                 | TRANSPORTED TO FIRST MEDICAL FACILITY BY should equal 0 and DIED AT SCENE/EN ROUTE should equal 7.   |

## P25/NM25 - Death Time - FARS Only

**FORMAT:** 4 numeric

**SAS NAME:** Person.DEATH\_HR, Person.DEATH\_MN, Person.DEATH\_TM

### ELEMENT VALUES:

| Codes     | Attributes                                     |
|-----------|------------------------------------------------|
| 8888      | Not Applicable (Non-fatal)                     |
| 0000-2359 | Valid Military Time                            |
| 0099-2399 | <a href="#">Known Hour but Unknown Minutes</a> |
| 9999      | <a href="#">Unknown</a>                        |

**Definition:** This element identifies the hour and minute of this person's death using the 24-hour clock format.

**Remarks:** Normally, the medical examiner or coroner is the source of data for death time. If there are no data inconsistencies or errors, use the official death time as recorded on the death certificate. Do not change the official death time without good cause.

If it is known that the person died at the scene and the official death time or "pronounced death time" (on the death certificate) is known to be in error, or is greater than 30 minutes after the CRASH TIME then [CRASH TIME](#) is the appropriate DEATH TIME to be used. If it is known the person died at the scene, and the time of death is pronounced at the scene by a paramedic or firefighter, and this pronounced time does not contradict other case information, use this time.

*See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.*

**0099-2399 (Known Hour but Unknown Minutes)** If minutes are unknown, code the actual hour and "99" for the minutes. One minute after midnight is coded **0001**.

**9999 (Unknown)** If the death certificate indicates the hour of death is unknown or provides a range greater than an hour, enter **9999 (Unknown)**.

### How to Code Midnight:

In general, code midnight as **0000** in military time. Midnight is considered to be the beginning of a new day rather than the end of a day. One minute after midnight is 12:01 and is coded as **0001**. However, there may be confusion over which day the source is referring to when "midnight" is cited or referred to without explanation. Our practice may not be the practice followed in your sources; therefore, you must determine which part of the day is being considered in your sources. The following are examples of midnight time references that do not easily translate to FARS and CRSS times.

- "midnight"
- 12:00-midnight
- 24:00

### End of Day

If your data sources give you a crash date and are consistent in talking about the end of that day, when they give a non-translatable “midnight” time reference of the crash, then you should code Crash Time as **2359**.

### Beginning of Day

If your sources give a crash date and are consistent in referring to the beginning or early moments of that day when they give a non-translatable “midnight” crash time, code “midnight” as **0000**.

### Consistency Checks [\(See Section 400\)](#):

### \*FARS ONLY ATTRIBUTES

**Definition:** This element identifies factors related to motor vehicle occupants (other than drivers) expressed in the case material.

**Remarks:** Code information provided in the case material associated with this person.

In addition to passengers in motor vehicles in-transport ([UNIT TYPE](#) 1), this element includes any occupants in motor vehicles that are not in-transport (UNIT TYPES 2, 3, 4). The attributes that are applicable to each is limited by [PERSON TYPE](#).

The following lists those related factors that may be used for each [PERSON TYPE](#):

| Person Type                                                                | Valid Related Factors                                                                                                                 |
|----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">01 (Driver of a Motor Vehicle In-Transport)</a>                | 000                                                                                                                                   |
| <a href="#">02 (Passenger of a Motor Vehicle In-Transport)</a>             | 000, 005, 008, 009, 010, 018, 032, 056, 087-999                                                                                       |
| <a href="#">03 (Occupant of a Motor Vehicle Not In-Transport)</a>          | 000, 005, 008, 009, 010, 018, 021, 026, 028, 029, 032, 033, 037, 040-042, 044, 045, 047, 051, 052, 056-070, 072-078, 080-083, 087-999 |
| <a href="#">09 (Unknown Occupant Type in a Motor Vehicle In-Transport)</a> | 000, 005, 008, 009, 010, 018, 032, 087-999                                                                                            |

For forms with [PERSON TYPE](#) **01 (Driver of a Motor Vehicle In-Transport)**, use [000 \(None\)](#). The related factors for drivers are captured in the [RELATED FACTORS-DRIVER LEVEL](#).

**000 (None)** is used when no applicable related factors are noted in the case material *or this person is a PERSON TYPE [01 \(Driver of a Motor Vehicle In-Transport\)](#)*.

**005 (Interfering with Driver)** is used when the case material identifies that the occupant of a motor vehicle in-transport was interfering with the driver.

**Examples include:**

- Obstructing the driver's view.
- Striking the driver with their body or an object.
- Rambunctious individuals who cause the driver to be inattentive, even without touching the driver or controls in the vehicle.
- A motorcycle passenger (or other cyclist) shifting weight or affecting the driver's control.

**\*008 (Mentally Challenged)** is used when the case material identifies *this person has an intellectual, cognitive, or developmental disability*.

**009 (Construction/Maintenance/Utility Worker)** is used if the case material identifies this person was an occupant of a working motor vehicle. This includes highway department, contractor, or utility company personnel.

**010 (Alcohol and/or Drug Test Refused)** is used when the officer notes that this person refused to take an alcohol and/or a drug test. Refusing a test does not necessarily mean that a test was not given. It is possible that after a refusal, the officer may have obtained a warrant or some other authorization to administer a test post-refusal. This includes when the person initially refuses and later consents. Because of this, it is possible to code **010 (Alcohol and/or Drug Test Refused)** and also code an actual test with results for the same person.

**\*018 (Mother of Dead Fetus/Mother of Infant Born Post-Crash)** is used when the case material identifies that this occupant is the mother of a fetus that died in or as a result of this crash or it is identified that this occupant gave birth after the crash whether the child survives or not. Note that for crash classification purposes, a fetus is considered to be part of a pregnant woman rather than a separate individual and, thus, is not counted as a separate occupant in the crash.

**021 (Overloading or Improper Loading of Vehicle with Passengers or Cargo)** is used when the case material identifies this occupant improperly loaded the vehicle occupants or cargo into or on the vehicle. This may only be used on the PERSON TYPE **03 (Occupant of a Motor Vehicle Not In-Transport)** and in SEATING POSITION

**11 (Front Seat, Left Side)**.

**Examples include:**

- The vehicle had more than 3 passengers in the front seat.
- There were people riding on the exterior of the vehicle.
- The vehicle was carrying occupants who were sitting or standing on the rails, tailgate of a pickup, or improperly sitting in the bed of a pickup.
- More than one person secured in a belt restraint.

- An unsecured or uncovered load violation.
- The vehicle's trunk was open with extra-large cargo protruding.
- The case material states the vehicle was overweight, over length or illegally or improperly oversize.

**\*026 (Following Improperly)** is used when the case material identifies this occupant followed too closely. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**Examples include:**

- Following a fire truck too closely.
- Failure to maintain a safe passing distance between trucks.
- Following another vehicle in a caravan too closely to allow entry by a merging vehicle.
- Following too close, generally. Also, code for cases where the case material document the vehicle was following too closely for weather conditions.

**089 (Parked Motor Vehicle with Equipment Extending into the Travel Lane)** is used when the case material identifies this occupant parked a vehicle but extended equipment (e.g., extended mirrors) attached to the vehicle was still in the travel lane. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#).

**NOTE:** This should not be used for loads of vehicles extending into the travel lane such as attached trailers or oversized cargo. In these cases, the vehicle is in-transport and not parked.

**\*028 (Improper Lane Usage)** is used when the case material identifies this occupant failed to properly keep their vehicle in the appropriate lane of travel. This attribute does not apply to vehicles that run off the roadway, that cross the median, *or exhibit control loss before crossing the centerline*. Also do not use this value for a vehicle that leaves its lane because of a previous impact or at the direction of a flagman or police officer. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**Examples include:**

- A vehicle that “drove left of center” striking an oncoming vehicle (includes both crossing a painted centerline and failing to maintain the proper side of a two-lane roadway with no painted centerline).
- A vehicle that goes straight in a turn lane.
- A vehicle that was using more than one lane on its side of a multi-lane highway.
- Trucks, buses, or slow vehicles failing to keep right for faster moving traffic.

For situations where the vehicle is on the wrong side as a result of a passing maneuver, see [033 \(Passing Where Prohibited by Posted Signs, Pavement Markings, or School Bus Displaying Warning Not to Pass\)](#).

**\*029 (Intentional Illegal Driving on Road Shoulder, In Ditch, on Sidewalk or on Median)** is used when the case material identifies this occupant was **intentionally** illegally driving in a location off the roadway (e.g., shoulder, median, roadside, etc.) This attribute should not be used when the vehicle enters one of these locations as part of an avoidance maneuver or as a result of a critical or harmful event. Also do not use this value for a vehicle that leaves its lane at the direction of a flagman or police officer. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**032 (Opening Vehicle Closure into Moving Traffic or While Vehicle is in Motion)** is used when the case material identifies this occupant improperly opened their door into moving traffic.

**Examples include:**

- An occupant opens a side door into moving traffic.
- An occupant opening the door at a stop light.
- An occupant of a parked motor vehicle opening a door into the travel lane.

**\*033 (Passing Where Prohibited by Posted Signs, Pavement Markings, or School Bus Displaying Warning Not to Pass)** is used when the case material identifies this occupant passed improperly by executing a passing maneuver where prohibited as designated by traffic controls or rules of the road. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**Examples include:**

- A vehicle passing stopped a school bus.
- A vehicle crossing over the solid line to pass another vehicle.
- Passing a vehicle stopped to allow a pedestrian movement.

**\*037 (Traveling on Prohibited Trafficways)** is used when the case material identifies this occupant was driving on an open trafficway that prohibited travel for the kind of vehicle they were operating. For example, driving a truck where prohibited, or operating a vehicle with hazardous materials cargo where prohibited. For trucks or slower vehicles using the left lane when prohibited, use [028 \(Improper Lane Usage\)](#). This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*040 (Passing Through or Around Barrier)** is used when the case material identifies this occupant drove out of or around a “demarcated” area. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)). For example, a working vehicle backing out of the closed portion of the work zone into an open travel lane.

**\*041 (Failure to Observe Warnings or Instructions on Vehicles Displaying Them)** is used when the case material identifies this occupant failed to heed warnings or follow instructions displayed on other vehicles. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

Examples include:

- Construction instructions such as arrows directing traffic mounted on a vehicle.
- Instructions on or warnings by emergency vehicles (ambulances, fire trucks, police cars).
- Failure to observe a wide right-turn warning on trucks or buses.
- Failure to heed hazard lights on a disabled vehicle or a school bus arm.

**\*042 (Failure to Signal Intentions)** is used when the case material identifies this occupant failed to signal their intentions. This attribute includes a failure to signal by either lamp turn signal or hand. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*044 (Driving Too Fast for Conditions or In Excess of Posted Maximum)** is used when the case material identifies this occupant was operating the vehicle too fast for certain road conditions or exceeding the posted speed limit. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*045 (Driving Less Than Posted Minimum)** is used when the case material identifies this occupant was driving too slowly, or so as to impede traffic. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*047 (Making Right Turn from Left-Turn Lane, Left Turn from Right-Turn Lane)** is used when the case material identifies this occupant was making an improper turn from a turn lane. To distinguish from [028 \(Improper Lane Usage\)](#), police officer must indicate the occupant's intention to turn to use this attribute. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*051 (Operator Inexperience)** is used when the case material identifies this occupant lacks experience operating the vehicle they were in at the time of the crash. Should be expressed by officer, **operator**, or passenger and not presumed based on age, rental status, or State of residence. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

Examples include:

- A **novice operator**.
- The **operator** parks the vehicle where parking is illegal because they are inexperienced.

**\*052 (Unfamiliar with Roadway)** is used when the case material identifies this occupant is unfamiliar with the area/location where they were when the crash occurred. Should be expressed by officer, **operator**, or passenger and not presumed based on age, rental status, or State of residence. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**Examples include:**

- An **operator** from out-of-State is unfamiliar with area.
- Operating on a new stretch of road or section of road altered because of construction and/or detour.
- The **operator** parks the vehicle where parking is illegal because they are unfamiliar with the location.

**\*056 (Non-Driver Flees Scene)** is used when the case material identifies that this non-**operator** left the scene of a Hit-and-Run crash.

**Examples include:**

- A passenger of motor vehicle *fled* scene on foot.
- Occupant of an involved parked vehicle leaves by driving their vehicle from the scene.
- An involved motor vehicle in-transport is driven away by a passenger in that vehicle.

**\*057 (Improper Tire Pressure)** is used when the case material identifies that improper tire pressure was present in one or more tires of this vehicle. Improper tire pressure is not a defect, but rather the irresponsibility of the person. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*059 (Overcorrecting)** is used when the case material identifies this occupant “overcorrected” based on the judgment of the police officer. This must be stated by the officer in the narrative or police crash report field to be coded. Overcorrecting and Oversteering are technically different, but this attribute may be selected for a reported combination of the two (e.g., overcorrecting/ oversteering) on the police crash report. This may only be used on the Person Form for the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**Vision Obscured By:**

The following set of attributes identifies visual obstructions noted in the case material. These attributes **are only applicable to** the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*060 (Rain, Snow, Fog, Smoke, Sand, Dust)**

**\*061 (Reflected Glare, Bright Sunlight, Headlights)**

**\*062 (Curve, Hill, or Other Design Features [including traffic signs, embankment])**

**\*063 (Building, Billboard or Other Structures)**

**\*064 (Trees, Crops or Vegetation)**

**\*065 (Motor Vehicle [including load])**

**Examples include:**

- A car stopped on the roadway.
- A tractor-trailer in-transport on the road.
- A school bus stopped for the purpose of loading and/or unloading children.

**\*066 (Parked Vehicle)**

**\*067 (Splash or Spray of a Passing Vehicle)**

**\*068 (Inadequate Lighting System)**

**\*069 (Obstructing Angles on the Vehicle)** is used when the case material identifies obstructing angles on this person's vehicle. This attribute should not be confused with visual obstructions from other vehicles. (See [065 \(Motor Vehicle \[including load\]\)](#) and **066 (Parked Vehicle)**).

**\*070 (Mirrors)** is used when the case material identifies that vision was obscured by any mirrors attached to or within a motor vehicle (rear view mirror, side mirror, etc.).

**\*072 (Other Visual Obstruction)** is used when the case material identifies that vision was obscured something other than previously listed. For example, a trailer that has been left parked on the side of the road by a truck or vehicle.

### ***Skidding, Swerving, Sliding Due To:***

This set of attributes is applicable to the occupant that attempted to avoid **and/or** whose ability to control the vehicle was affected by one of the ***following—and resulted in that vehicle skidding, swerving, or sliding***. These attributes ***are only applicable to*** the occupant that is PERSON TYPE [03 \(Occupant of a Motor Vehicle Not In-Transport\)](#) and in SEATING POSITION [11 \(Front Seat, Left Side\)](#) in a working motor vehicle ([UNIT TYPE 4](#)).

**\*073 (Severe Crosswind)** is used when the case material identifies this occupant's ability to control the vehicle was affected by severe crosswinds.

**\*074 (Wind from Passing Truck)** is used when the case material identifies this occupant's ability to control the vehicle was affected by winds produced by a passing truck.

**\*075 (Slippery or Loose Surface)** is used when the case material identifies this occupant's ability to control the vehicle was affected by the surface composition of the roadway and/or the condition of that composition. Not to be used when the surface is slippery due to environment conditions such as rain, ice, or snow (see [083 \(Ice, Snow, Slush, Water, Sand, Dirt, Oil, Wet Leaves on Road\)](#)).

**Examples include:**

- A slippery surface that is old or worn resulting in loose gravel on the roadway.
- Blacktop that is slick as a newly paved surface.

**\*076 (Tire Blowout or Flat)** is used when the case material identifies this occupant's ability to control the vehicle was affected by a tire blowout or flat.

**\*077 (Debris or Objects in Road)** is used when the case material identifies this **operator** attempted to avoid or lost control as a result of debris in the road. Examples would include nails, glass, trash cans, tire retread, trash, dead animals, pile of sand, barricades, etc.

**\*078 (Ruts, Holes, Bumps in Road)** is used when the case material identifies this **operator** attempted to avoid or lost control as a result of a road surface anomalies such as ruts, holes, dips, or bumps.

**\*080 (Vehicle in Road)** is used when the case material identifies this **operator** attempted to avoid or lost control as a result of another vehicle in the road. This includes both contact and non-contact vehicles that **remain at the scene**.

**\*081 (Phantom Vehicle)** is used when the case material identifies this **operator** attempted to avoid or lost control as a result of a non-contact vehicle that **left the scene** as described by the police officer.

**\*082 (Pedestrian, Pedal Cyclist, or Other Non-Motorist)** is used when the case material identifies this **operator** attempted to avoid or lost control as a result of a pedestrian, a pedalcyclist, or other type of non-motorist.

**\*083 (Ice, Snow, Slush, Water, Sand, Dirt, Oil, or Wet Leaves on Road)** is used when the case material identifies this occupant's ability to control the vehicle was affected by a substance on the roadway that caused the roadway to be slick, which may interfere with the traction of the vehicle. This attribute does not include part of the roadway composition. For cases involving roadway composition issues, see [075 \(Slippery or Loose Surface\)](#).

#### **Other Factors:**

**087 (Police or Law Enforcement Officer)** is used when the case material identifies that this person was a police or law enforcement officer working at the time of the crash. The officer may be affiliated at the Federal, State, or local law enforcement level. This would also include military and park police, border patrol, and all other sworn law enforcement officers.

**092 (Person in Ambulance Treatment Compartment)** is used when the case material identifies that this occupant was located in the ambulance treatment compartment. For example: patients, EMS personnel, and other person accompanying patient.

**Note:** For people identifiable as EMS personnel also use RELATED FACTORS - PERSON (MV OCCUPANT) attribute [094 \(Emergency Medical Services Personnel\)](#).

**094 (Emergency Medical Services Personnel)** is used when the case material identifies that this person was described as emergency medical services (EMS) personnel. This includes personnel located in the cab and in the treatment compartment of an ambulance.

**Note:** For people identifiable as EMS personnel located in the ambulance treatment compartment, also use RELATED FACTORS - PERSON (MV OCCUPANT) attribute [092 \(Person in Ambulance Treatment Compartment\)](#).

**095 (Fire Personnel)** is used when the case material identifies that this person was fire personnel.

**096 (Tow Operator)** is used when the case material identifies that this person was an operator of a tow truck.

**097 (Transportation (i.e., maintenance workers, safety service patrol operators, etc.))** is used when the case material indicate this person was working to assist with detouring traffic, maintaining roadway damage, or a safety service patrol operator, etc.

**\*088 (Seat Back Not in Normal Upright Position, Seat Back Reclined)** is used when the case material identifies that this occupant's seat back was not in a normal, safe driving/seating position prior to the crash.

**091 (Portable Electronic Devices)** is used when the case material identifies that this occupant had an electronic device (mobile phone, MP3 player, PDA, etc.) in the vehicle that was somehow related to the crash occurrence.

**999 (Reported as Unknown)** is used when the circumstances surrounding the crash are unknown and reported as "unknown" by the investigating officer.

#### **\*FARS ONLY ATTRIBUTES**

#### **Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                         | <b>THEN</b>                                                                                              |

### NM3/P4 - Person Number

**FORMAT:** 3 numeric

**SAS NAME:** Person.PER\_NO

#### ELEMENT VALUES:

| Codes   | Attributes      |
|---------|-----------------|
| 001-999 | Assigned Number |

**Definition:** This element identifies a number for people that are not in a motor vehicle in consecutive order.

**Remarks:** This element's values and remarks are identical to the Person Level (MV Occupant) Level element PERSON NUMBER. Please see [PERSON NUMBER](#) for remarks.

#### Consistency Checks ([See Section 400](#)):

| Error ID | Error Message                                                                                              |
|----------|------------------------------------------------------------------------------------------------------------|
| CSI6     | For each VEHICLE NUMBER, PERSON NUMBERS must be consecutive, beginning with 001 and with no gaps.          |
| CSI7     | PERSON NUMBERS for persons not in motor vehicles must be consecutive, beginning with 001 and with no gaps. |

## NM4 - Vehicle Number of Motor Vehicle Striking Non-Motorist

**FORMAT:** 3 numeric

**SAS NAME:** Person.STR\_VEH

**ELEMENT VALUES:**

| Codes   | Attributes              |
|---------|-------------------------|
| 001-998 | Assigned Vehicle Number |

**Definition:** This data element captures the in-transport vehicle that made contact with this non-motorist.

**Remarks:** *If* a non-motorist is contacted by a parked or working motor vehicle that was propelled by an in-transport vehicle, record the vehicle number of the in-transport vehicle.

In cases where more than one vehicle makes contact with a non-occupant, code the number of the vehicle that caused the most significant injury. If uncertain, code the number of the vehicle that made contact first.

If a non-motorist is hit as a result of a vehicle to vehicle collision and you cannot reasonably determine which vehicle struck the non-motorist, use the lowest vehicle number of the MVIT(s) involved in the vehicle to vehicle event that resulted in the pedestrian or pedalcyclist collision. In the element

| 19    | <a href="#">Unknown Type of Non-Motorist</a>                                         |

**Definition:** This element describes the role of this person involved in the crash.

**Remarks:** An involved person in a crash must maintain PERSON TYPE during the crash. Once the unstabilized situation begins, a driver, passenger, or non-motorist/non-occupant cannot change PERSON TYPE until the situation stabilizes.

If a person is entering or exiting a vehicle before the unstabilized situation begins, try to determine if the person has successfully changed type before control is lost. For example, a person attempting to get into an automobile that begins to move would be classified as a pedestrian. Likewise, a passenger stepping off a bus as it begins to pull away, would be classified as an occupant.

**04 (Occupant of a Non-Motor Vehicle Transport Device)** refers to people riding in an animal-drawn conveyance, on an animal, or injured occupants of railway trains, etc.

**05 (Pedestrian)** is used for all pedestrians except for those in/on personal conveyances (see [11 \(Person on Motorized Personal Conveyance\)](#), [12 \(Person on Non-Motorized personal Conveyance\)](#), and [13 \(Person on Personal Conveyance, Unknown if Motorize or Non-Motorized\)](#) below) and in buildings (see [10 \(Persons In/On Buildings\)](#) below). A person pushing a vehicle or being carried by a pedestrian should be coded **05 (Pedestrian)**.

**06 (Bicyclist)** is used for a two-wheel, non-motorized cycle. This includes all people (operator and passengers) on a bicycle and a person being pulled by a bicycle (e.g., in a wagon or bike trailer).

**07 (Other Cyclist)** is used for unicycles and tricycles.

**10 (Persons In/On Buildings)** is used for a person inside of or on a building who is struck by a motor vehicle directly or by way of an object set in motion (e.g., crash debris as a vehicle penetrates a wall). **10 (Persons In/On Buildings)** takes precedence over attributes “**05-07 and 11-13.**”

**NOTE about personal conveyances:** A personal conveyance is a device, other than a transport device, used by a pedestrian for personal mobility assistance or recreation. These devices can be motorized or human powered, but not propelled by pedaling.

**Inclusions:**

1. Rideable toys
  - a. Roller skates, in-line skates
  - b. Skateboards
  - c. Skates
  - d. Baby carriage
  - e. Scooters
  - f. Toy wagons
2. Motorized rideable toys
  - a. Motorized skateboard
  - b. Motorized toy car
  - c. **Motorized kick scooter**
3. Devices for personal mobility assistance
  - a. **Self-balancing personal conveyance (e.g., Segway-style device)**
  - b. Motorized and non-motorized [wheelchairs](#)
  - c. **Mobility aid** scooters

**Exclusions:**

1. Golf cart
2. Low speed vehicles (LSVs)
3. Go-carts
4. Minibike
5. “Pocket” motorcycles
6. Motor scooters
7. Moped

**Wheelchair:** use the term, “wheelchair” as follows:

“Wheelchair - A mobility aid, usable indoors, and designed for and used by individuals with mobility impairments, whether operated manually or powered.” Therefore, all wheelchair users, motorized or not, are **People on Personal Conveyances**.

**RATIONALE:**

Some States have passed legislation to classify operators of motorized wheelchairs as “pedestrians” and others as “motor vehicles.” Also, there seems to be an increase in the variety of forms these

devices take (if not in the actual number in use). Some resemble three-wheeled scooters; others small four-wheel carts; still others look like the typical human-powered wheelchair. They are in use by individuals who are unable to walk, who have limited walking ability, or who need to avoid walking for reasons of health or stamina. Since these devices simply supply a form of assisted “walking” for such people, their legitimate users may be seen as “other people on personal conveyances” just as other non-motorists moving along a sidewalk, walking with or against traffic on the edge of a road, crossing the roadway, or turning into a driveway.

**11 (Person on Motorized Personal Conveyance)** is used when the non-motorist was using a personal conveyance equipped with a motor to assist or assume control of propelling the conveyance. Use this code anytime the device has a motor. If the motor was not in use or it is unknown if the motor was in use at the time of the crash, then this attribute still applies. Examples: motorized skateboard, motorized wheelchair or mobility aid scooters, motorized e-scooters, self-balancing personal conveyances (e.g., hoverboard or Segway-style device), etc.

**NOTE:** Motorized bicycles and e-bikes are considered motor vehicles. See NCSA BODY TYPE [81 \(Moped or Motorized Bicycle\)](#). Likewise, a person riding one of these vehicles is considered a Motor Vehicle Occupant.

**12 (Person on Non-Motorized Personal Conveyance)** is used when the non-motorist was using a personal conveyance not equipped with a motor to assist or assume control of propelling the conveyance. Examples: non-motorized roller skates or in-line skates, non-motorized skateboard, baby carriage, non-motorized scooter, non-motorized wheelchair, etc.

**13 (Person on Personal Conveyance, Unknown if Motorized or Non-Motorized)** is used when it is known that the non-motorist was using a personal conveyance at the time of the crash, but it is unknown whether the device was motorized or non-motorized (i.e., [code 11](#) or [code 12](#)).

**19 (Unknown Type of Non-Motorist)** is used only when it cannot be determined which attribute is applicable for people not in motor vehicles.

**Consistency Checks** ([See Section 400](#)):

| Error ID | IF                                                                                     | THEN                                                                                              |

## NM8/P8 - Injury Severity

**FORMAT:** 1 numeric

**SAS NAME:** Person.INJ\_SEV

**ELEMENT VALUES:**

| Codes | Attributes                                   |
|-------|----------------------------------------------|
| 0     | <a href="#">No Apparent Injury (O)</a>       |
| 1     | <a href="#">Possible Injury (C)</a>          |
| 2     | <a href="#">Suspected Minor Injury (B)</a>   |
| 3     | <a href="#">Suspected Serious Injury (A)</a> |
| 4     | <a href="#">Fatal Injury (K)</a>             |
| 5     | <a href="#">Injured, Severity Unknown</a>    |
| 6     | <a href="#">Died Prior to Crash*</a>         |
| 9     | <a href="#">Unknown/Not Reported</a>         |

**Definition:** This element describes the severity of the injury to this person in the crash.

**Remarks:** This element's values and remarks are identical to the Person Level (MV Occupant) Level element INJURY SEVERITY. Please see [INJURY SEVERITY](#) for remarks.

**Consistency Checks** ([See Section 400](#)):

## NM9 - Pedestrian/Bike Typing

**FORMAT:** Elements Completed in **RBIS**

**SAS NAME:** Various

**Definition:** This element describes the precrash actions leading to crashes between motor vehicles and pedestrians or bicyclists.

**Remarks:** Pedestrian and Bicycle Crash Type describes the precrash actions of the involved parties to better define the sequence of events and precipitating actions leading to crashes between motor vehicles and pedestrians or bicyclists.

During the 1970s NHTSA developed methodologies for typing pedestrian and bicycle crashes. In the 1990s the methodologies were applied to more than 8,000 pedestrian and bicycle crashes in six States. The results provided a representative summary of the distribution of crash types experienced by pedestrians and bicyclists and, over time, this method has evolved and was refined. Pedestrian/Bike typing is offered as a tool to help overcome hindrances to the development of effective countermeasures to prevent bicyclist and pedestrian crashes.

In FARS and CRSS, Pedestrian and Bicycle Crash Typing is accomplished through a software application referred to as the **Ped/Bike Wizard**. By clicking on choices in the wizard, the analyst/coder enters data into the file without typing each specific data element's attribute (numeric code).

The elements, attributes, and remarks are not presented here in the main Coding and Validation manual, but rather in the detailed companion **FARS/CRSS Pedestrian Bicyclist Manual**.

The Pedestrian/Bike Typing application is presented for the following [person types](#):

- [Pedestrian](#),
- [Person on Personal Conveyance](#),
- [Bicyclist](#),
- [Other Cyclist](#).

**Consistency Checks** ([See Section 400](#)):

**Definition:** This element identifies the location of the non-motorist with respect to the roadway at the time of the crash.

**Remarks:** “At intersection” means: The person is **on a roadway** (travel lane) either **(1)** in the intersection, **(2)** in an area between a crosswalk and the perimeter of the intersection, or **(3)** in a crosswalk (whether marked or unmarked) adjacent to an intersection. If there are no crosswalks, “at intersection” means only the intersection, which is the area embraced within the prolongation of the lateral curb lines or, if none, the lateral boundary lines of the roadways. *See the [Coding Guide: Intersections](#) for helpful information.*

**Crosswalk** is **(1)** that part of a roadway at an intersection included within the connections of the lateral lines of the sidewalks on opposite sides of the highway measured from the curbs or, in the absence of curbs, from the edges of the traversable roadway, and in the absence of a sidewalk on one side of the highway, that part of the highway included within the extension of the lateral line of the existing

sidewalk to the side of the highway without the sidewalk, with such extension forming a right angle to the centerline of the highway; or **(2)** Any portion of a roadway at an intersection or elsewhere distinctly indicated for pedestrian crossing by lines or other markings on the surface of the roadway placed in accordance with the provisions in the [Manual of Uniform Traffic Control Devices](#).

**Intersection** is an area that **(1)** contains a crossing or connection of two or more roadways not classified as driveway access **(2)** is embraced within the prolongation of the lateral curb lines, or, if none, the lateral boundary lines of the roadways.

**01 (At Intersection-In Marked Crosswalk)** is used when a person is in that portion of a roadway at an intersection that is distinctly indicated for pedestrian crossing by lines or other markings on the surface of the roadway. This attribute includes shared-use path crossings. This does not include crosswalks located in mid-blocks.

**02 (At Intersection-In Unmarked/Unknown if Marked Crosswalk)** is used when the person is “at intersection” **within the prolongations of the sidewalk edges** but there are no lines or other markings on the surface of the roadway (unmarked crosswalk). There must be a sidewalk or improved path present on one side of the leg of the trafficway that this person is crossing for there to be an unmarked crosswalk. If there are no sidewalks, there are no crosswalks. If it is unknown if the crosswalk is marked or unmarked, default to unmarked.

*Figure 28: Intersection With Only Two Crosswalks*

In a four-way intersection with sidewalks running along the East/West trafficway and no sidewalks on the North/South trafficway, the intersection area would only have two crosswalks. The two that allow crossing of the North/South trafficway. (See [Figure 28](#) above)

**03 (At Intersection-Not in Crosswalk)** refers to a person in a travel lane that is not using an available crosswalk or there is not a crosswalk at this location.

- For people other than pedalcyclists in a marked bicycle lane or an unmarked prolongation of the bicycle lane in an intersection, use **03 (At Intersection-Not in Crosswalk)**.
- For pedalcyclists in a marked bicycle lane or an unmarked prolongation of the bicycle lane in an intersection, use [16 \(Bicycle Lane\)](#).

- If you do not know if there is a bike lane through the intersection, then default to **03 (At Intersection-Not in Crosswalk)**.

**09 (At Intersection-Unknown Location)** is used when a person is known to be at an intersection, but it cannot be determined whether the person was in a crosswalk area (marked or unmarked) or the intersection.

**10 (Not at Intersection-In Marked Crosswalk)** is used when a person is in the portion of the roadway, not at an intersection, that is distinctly indicated for pedestrian crossing by lines or other markings on the surface of the roadway (i.e., the case identifies a mid-block crosswalk exists and the person is using it.). This attribute includes shared-use path crossings.

**11 (Not at Intersection-On Roadway, Not in Marked Crosswalk)** is used when a person is in the portion of the roadway, not at an intersection, and either:

1. the case identifies a mid-block crosswalk exists and the person is not using it (e.g., the person is jaywalking when a mid-block crosswalk is available),
2. there is not a crosswalk at this location, or
3. the person is crossing at a location where a mid-block crosswalk would not be expected to exist (e.g., a rural roadway or interstate).

**13 (Not at Intersection - On Roadway, Crosswalk Availability Unknown)** is used when it cannot be determined if a crosswalk was available (e.g., there is some information (possibly conflicting) that leads you to believe that there may be a mid-block crosswalk at this location, but there is not sufficient information about the location to be able to make a determination).

**14 (Parking Lane/Zone)** refers to a person in an area on the roadway, or next to the roadway, on which parking is permitted in marked or unmarked spaces. This includes curbside and edge of roadway parking (for example, legal residential parking, city-street parking, etc.). Sometimes a strip of roadway can be designated for parking at certain hours of the day (parking lane) and for regular travel at other hours (travel lane). This code should NOT be used during hours when parking is NOT permitted (see [11 \(Not at Intersection-On Roadway, Not in Marked Crosswalk\)](#)).

**16 (Bicycle Lane)** is used when a person is adjacent to travel lanes in a bikeway that has been designated for preferential or exclusive use by pedalcyclists through striping, signage, or pavement markings.

- For people other than pedalcyclists in a marked bicycle lane or an unmarked prolongation of the bicycle lane in an intersection, use [03 \(At Intersection-Not in Crosswalk\)](#).
- For pedalcyclists in a marked bicycle lane or an unmarked prolongation of the bicycle lane in an intersection use **16 (Bicycle Lane)**.
- When at an intersection, if you do not know if there is a bike lane through the intersection, then default to [03 \(At Intersection-Not in Crosswalk\)](#).

**20 (Shoulder/Roadside)** - Shoulder is that part of a trafficway contiguous with the roadway for emergency use, for accommodation of stopped motor vehicles, and lateral support of the roadway structure. Roadside is the outermost part of the trafficway from the property line or other boundary in to the edge of the first road. For people on a sidewalk on the roadside select **21 (Sidewalk)**.

**21 (Sidewalk)** is any improved surface primarily constructed for use by pedestrians. Do not select this attribute for sidewalks within a [23 \(Driveway Access\)](#), **22 (Median/Crossing Island)**, [25 \(Non-Trafficway Area\)](#).

**22 (Median/Crossing Island)** is used when a person is in a median or crossing island. Median is an area of trafficway between parallel roads separating travel in opposite directions. A median should be four or more feet wide. Crossing Island is a cement or grassy area in the middle of a trafficway. This attribute excludes crosswalk areas that pass through a median, crossing or traffic island (i.e., select [01 \(At Intersection-In Marked Crosswalk\)](#), [02 \(At Intersection-In Unmarked/Unknown if Marked Crosswalk\)](#), or [10 \(Not at Intersection-In Marked Crosswalk\)](#).)

**23 (Driveway Access)** is a portion of the trafficway at the end of a driveway providing access to property adjacent to a trafficway. This includes the driveway crossing that is the portion of the driveway access where a sidewalk or shared-use path crosses over the driveway access.

**24 (Shared-Use Path)** is used when a person on a bikeway physically separated from motorized vehicular traffic by an open space or barrier and either within the highway right-of-way or an independent right-of-way. Shared-Use Paths will also be used by pedestrians, skaters, wheelchairs, joggers, and other non-motorized users. Shared-use path **crossings** are coded under [01 \(At Intersection-In Marked Crosswalk\)](#) or [10 \(Not At Intersection-In Marked Crosswalk\)](#).

**25 (Non-Trafficway Area)** is not physically located on any land way open to the public as a matter of right or custom for moving people or property from one place to another. For example: a person in a parking lot, a yard, a person in a closed portion of a work zone, or in a house.

**28 (Other)** is used when a person is at a location stated in the case material that is not reflected in the listed attributes for this data element. These would be people within the trafficway (i.e., not element value **25 (Non-Trafficway Area)**). Examples include central islands of rotary intersections, gores, separators, or directional/channelizing islands.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **28 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **98 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Not Reported)** *Check to see if [99 \(Reported as Unknown Location\)](#) is more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered “**Not Reported**.”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the

State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown Location)** is used when the case material states that the location of the non-motorist was unknown at the time of the crash.

**Consistency Checks** [\(See Section 400\)](#):

**Definition:** This element describes the action(s) of the non-motorist at the time of their involvement in the crash.

**Remarks:** As a “Select All That Apply” element, attributes can be used in combination.

**01 (Going to or from School [K-12])** includes person age 5-18 or an adult supervising people age 5 - 18 going to or from a school for any reason. Examples are going to a school dance, sports practice, or extracurricular activities.

**02 (Waiting to Cross Roadway)** is used when the non-motorist is near the curb or the roadway edge waiting to cross a roadway anywhere along the roadway. If the pedestrian **began to cross the roadway**, stopped, and then was struck select **03 (Crossing the Roadway)**. For people adjacent to the roadway where their **intent to cross is not identified**, use [09 \(Stationary and Adjacent to Roadway \[e.g., Shoulder, Median, Sidewalk\]\)](#).

**03 (Crossing Roadway)** is used when the non-motorist was moving across or in the travel lanes with the goal of crossing the roadway.

**04 (Jogging/Running)** is used when the pedestrian was running or jogging.

**05 (Movement Along Roadway with Traffic [In or Adjacent to Travel Lane])** is used when the non-motorist was moving in the same direction as the flow of traffic, either in the travel lane or adjacent to it (e.g., jogging or walking on shoulder or roadside). This also includes situations where the person's action/intent was traveling along the roadway. For example, a person stopped momentarily when they were struck (e.g., to tie shoes, talk on mobile phone) or someone that moved out into the path of a vehicle to avoid an obstacle along the roadside. This may include the roadway edge, shoulder (paved or unpaved), sidewalk, roadside, median or driveway access, etc. *Note: This excludes At Intersection location where the non-motorist is crossing. See [03 \(Crossing Roadway\)](#).*

**06 (Movement Along Roadway Against Traffic [In or Adjacent to Travel Lane])** is used when the non-motorist was moving in the opposite direction of the flow of traffic (facing oncoming vehicles), either in the travel lane or adjacent to it (e.g., jogging or walking on shoulder or roadside). This also includes situations where the person's action/intent was traveling along the roadway. For example, a person stopped momentarily when they were struck (e.g., to tie shoes, talk on mobile phone) or someone that moved out into the path of a vehicle to avoid an obstacle along the roadside. This may include the roadway edge, shoulder (paved or unpaved), sidewalk, roadside, median, or driveway access, etc. *Note: This excludes At Intersection location where the non-motorist is crossing. See [03 \(Crossing Roadway\)](#).*

**16 (Movement Along Roadway - Direction Unknown)** is used when the non-motorist was moving in or adjacent to a travel lane but their direction with respect to the flow of traffic is unknown (e.g., jogging or walking on shoulder or roadside). This may include the roadway edge, shoulder (paved or unpaved), sidewalk, roadside, median, or driveway access, etc. *Note: This excludes At Intersection location where the non-motorist is crossing. See [03 \(Crossing Roadway\)](#).*

**08 (In Roadway - Other [Working, Playing, etc.])** is used when the non-motorist was in the roadway but not crossing it. Examples include conducting maintenance, playing in the roadway, operating a snow blower or lawn care equipment, or lying in the roadway. For cases involving a non-motorist working within a closed portion of a work zone area, use attribute [14 \(Other \[Specify:\]\)](#).

**09 (Stationary and Adjacent to Roadway [e.g., Shoulder, Median, Sidewalk])** is used when the non-motorist was not moving and not in the roadway but in an area immediately adjacent to the roadway, such as a median, shoulder, sidewalk, pedestrian refuge, traffic island, etc.

**10 (Working in Trafficway [Incident Response])** is used when the non-motorist was in the roadway as part of an official response to an incident, such as a firefighter moving between an emergency vehicle and a crash involved vehicle. Also see [RELATED FACTORS - PERSON \(NOT A MOTOR VEHICLE OCCUPANT\) LEVEL](#) codes [087 \(Police or Law Enforcement Officer\)](#), [094 \(Emergency Medical Services Personnel\)](#), [095 \(Fire Personnel\)](#), [096 \(Tow Operator\)](#), or [097 \(Transportation\)](#) to see if any apply.

**11 (Entering/Exiting Parked/Stopped Vehicle)** is used when a pedestrian was adjacent to a stopped or parked vehicle and in the process of getting into or had just exited that stopped or parked vehicle. This does not include crashes involving pedestrians performing other actions such as crossing the roadway to/from a parked vehicle or other movements that occurred after the pedestrian exited the vehicle.

**12 (Disabled Vehicle Related [Working on, Pushing, Leaving/Approaching])** is used when the pedestrian was outside of a disabled *or inoperative* vehicle for any of a number of reasons, including working on it, pushing it, leaving it, or approaching it. *For vehicles in a previous crash, it is not necessary to know the damage severity.*

**14 (Other [Specify:])** is used when the actions or circumstances stated in the case material does not reflect the listed attributes for this data element. This includes non-motorists working within a closed portion of a work zone area.

**Note:** For attributes with a “Specify:” designation, a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**98 (Not Reported)** Check to see if **99 (Reported as Unknown)** is more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported**.”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when the case material states that the action or circumstances of the non-motorist prior to the crash was unknown.

**Consistency Checks** ([See Section 400](#)):

**Definition:** This element describes the action(s) and/or circumstances of the non-motorist that law enforcement indicated may have contributed to the crash.

**Remarks:** As a “Select All That Apply” element, attributes can be used in combination.

**00 (None Noted)** is used when no contributing circumstances or improper actions are noted by the officer for this non-motorist. “Not Reported” is coded here. If this attribute is used no other attribute may be selected.

**01 (Dart-Out - Visual Obstruction Noted)** is used when a person entered the roadway and was involved in a collision with a vehicle where the driver’s view of the person was blocked until an instant before impact. A dart-out can only occur if there is some documented visual obstruction (*i.e., DRIVER’S VISION OBSCURED BY must not equal 00 (No Obstruction Noted), 95 (No Driver Present/Unknown if Driver Present), or 99 (Reported as Unknown) for the driver of the vehicle that struck this Non-Motorist*).

**11 (Dash - Run, No Visual Obstruction Noted)** is used when a person ran into the roadway and was involved in a collision with a vehicle. There is no mention in the case material that the driver’s view of the person was obstructed. The case material should state that the person **ran**.

**Examples of proper use include:**

- A person’s activity prior to the crash is jogging or running, but just prior to the impact the non-motorist darted into the roadway.
- Children seen playing in a front yard, who suddenly run into the road to retrieve an object associated with their play (e.g., a ball).

**02 (Failure to Yield Right-of-Way)** is used when a person fails to yield the right-of-way as indicated in the case material. A citation need not be issued, only that a failure to yield by the person was represented on the police crash report through the crash description, diagram, and or coded boxes. *The officer does not have to make the specific statement “failed to yield.” For example, a person crossing in the path of a vehicle outside of an intersection and not in a crosswalk would be failing to yield.*

**Examples include:**

- Failure to yield when exiting a driveway.
- Mid-block crossings not at a crosswalk.
- Not clearing an intersection before the light turns green for crossing traffic.
- Failure to yield at an intersection not controlled by a stop sign or flashing red lights.
- A bicyclist who stopped at the stop sign but did not realize it was a 2-way stop rather than a 4-way stop control and proceeded into the intersection without yielding to traffic on the through trafficway.

Failure to obey a traffic control device is coded as **03 (Failure to Obey Traffic Signs, Signals, or Officer)**.

**03 (Failure to Obey Traffic Signs, Signals, or Officer)** is used when a person fails to obey a traffic control device as indicated in the case material. Examples include person does not obey traffic signs, traffic control devices (including pedestrian signals), traffic officers, or safety zones; or passes around railroad gates.

**04 (In Roadway Improperly [Standing, Lying, Working, Playing, etc.])** is used when a person was indicated to have been in the roadway improperly other than making an improper crossing as in code **12 (Improper Crossing of Roadway or Intersection [Jaywalking])**.

**Examples include:**

- Playing in the road before the vehicle arrived. The person must not have just run into the roadway after a ball, which would be coded [01 \(Dart-Out - Visual Obstruction Noted\)](#) or [11 \(Dash - Run, No Visual Obstruction Noted\)](#).
- Working in the road other than because of the requirement of his/her job, (e.g., someone walking backwards into the roadway with a snow blower or lawn care equipment).
- In the street voluntarily, such as a civilian directing traffic at the scene of a crash.
- Attempting to hail a cab, flag down assistance, or flag down a transit bus between designated stops.
- Sitting, getting up, asleep/unconscious, kneeling, etc.

**05 (Entering/Exiting Parked or Stopped Vehicle)** is used when a pedestrian was adjacent to a stopped or parked vehicle and in the process of getting into or had just exited that stopped or parked vehicle. This does not include crashes involving pedestrians performing other actions such as crossing the roadway to/from a parked vehicle or other movements that occurred after the pedestrian exited the vehicle.

**06 (Inattentive [Talking, Eating, etc.])** is used when the case material specifically state a person is inattentive, lost in thought or distracted. Examples include using any electronic devices (mobile phone, video game, e-reader), using earbuds on a music player while jogging, chatting with a neighbor, caring for a baby in a stroller, admiring a garden, etc.

**07 (Improper Turn/Merge)** is used when the case material indicate the bicyclist/operator made an improper turn or merge. Examples of an improper turn include too wide right or left turns, making a right turn from the left lane, a left turn from the right lane or unsafe U-turns. An example of an improper merge is when the bicycle lane ends and the bicyclist merges into the path of a vehicle without leaving sufficient space.

**08 (Improper Passing)** is used when the case material indicate the bicyclist/operator made an improper passing maneuver. The bicyclist/operator may be passing a motor vehicle or another bicyclist. Actions include passing on the right, and where prohibited by signs, pavement markings, or a stopped school bus, (i.e., mainly violations as designated by traffic controls). Improper passing that is based on faulty judgment errors such as insufficient distance, or inadequate visibility are captured by [20 \(Passing with Insufficient Distance or Inadequate Visibility or Failing to Yield to Overtaking Vehicle\)](#).

**09 (Wrong-Way Riding or Walking)** is used when a person was identified in the case material to have been traveling the wrong way.

**10 (Riding on Wrong Side of Road)** is used when a bicyclist was identified in the case material to have been traveling on the wrong side of the road.

**12 (Improper Crossing of Roadway or Intersection [Jaywalking])** is used when a person is engaged in crossing a road but is not doing so properly. This includes mid-block crossings outside a crosswalk and crossing at an intersection by cutting on a diagonal through it. The officer's representation of either circumstance on the diagram or in the narrative substantiates the use of this attribute. The person may be engaged in other activities such as the continuation of jogging/running or a "sudden or impulsive" dart, run, etc. This attribute should not be used in conjunction with [04 \(In Roadway Improperly \[Standing, Lying, Working, Playing, etc.\]\)](#).

**13 (Failing to Have Lights on When Required)** is used when the case material indicate the operator of a bicycle, animal-drawn conveyance, or personal conveyance failed to have lights on when required. This also includes not having lights available to turn on and may be used with **14 (Operating Without Required Equipment)**.

**14 (Operating Without Required Equipment)** is used when the case material indicate that the bicycle, animal-drawn conveyance, or person conveyance, was being operated without the proper equipment such as headlights, taillights, etc. Helmet use is captured under [NON-MOTORIST SAFETY EQUIPMENT](#).

**15 (Improper or Erratic Lane Changing)** is used when a bicyclist, operator of horse-drawn vehicle, rollerblader, or skateboard rider was weaving in and out of traffic. This includes maneuvering between vehicles and in-and-out of a bike lane.

**16 (Failure to Keep in Proper Lane or Running Off Road)** is used when a bicyclist/operator fails to stay in the proper lane or runs off the road. For example, a bicyclist fails to keep in bicycle lane or operator of horse-drawn vehicle goes straight in a turn lane. This includes running into a median or drifting into a parking lane.

**17 (Making Improper Entry to or Exit from Trafficway)** is used when a person is engaged in entering or exiting the trafficway but is not doing so properly, or in a manner that would be anticipated by others. This includes entering or exiting the trafficway midblock between driveway accesses, improper use of ramps and turn-bays to enter or exit, and or cutting on a diagonal across a lawn or parking lot to enter a trafficway. This may be used in conjunction with [02 \(Failure to Yield Right-of-Way\)](#), [03 \(Failure to Obey Traffic Signs, Signals, or Officer\)](#), [07 \(Improper Turn/Merge\)](#), and/or [09 \(Wrong-Way Riding or Walking\)](#) if they apply. This code does not apply to [PERSON TYPES 05 \(Pedestrian\)](#) or [10 \(Persons In/On Buildings\)](#).

**18 (Operating in Other Erratic, Reckless, Careless or Negligent Manner)** is used when explicitly stated in the case material. Examples include bicyclists doing wheelies, attempting to grab on to a vehicle for motion (“skitching”), or skateboard racing.

**19 (Not Visible [Dark Clothing, No Lighting, etc.])** is used when the non-motorist was not visible to the motorist because of blocked views, insufficient lighting, or other reasons such as clothing that blends in with the surroundings at any time of the day (camouflage) or dark clothing in the rain at night. The officer must indicate that the non-motorist was not visible.

**20 (Passing with Insufficient Distance or Inadequate Visibility or Failing to Yield to Overtaking Vehicle)** is used when an improper passing maneuver is indicated in the case material for the non-motorist. This indicates passing violations based on faulty judgment. This may be used in conjunction with [08 \(Improper Passing\)](#) if both apply.

**21 (Other, Specify:)** is used when the case material states that an action(s)/circumstance(s) by the non-motorist may have contributed to the crash, but are not listed in these attributes. Examples include being pushed into the roadway, falling from a bicycle, traveling on a prohibited roadway.

**\*Note: For** attributes with a “Specify:” designation, a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**99 (Reported as Unknown)** is used when the officer indicated unknown in the case material's contributing circumstances field or the narrative and no other information is available. If this attribute is used no other attribute may be selected.

**Consistency Checks** ([See Section 400](#)):

**Definition:** This element identifies the attribute(s) that best describe this non-motorist's attention prior to the non-motorist's involvement in this crash. This element reports on the presence of any distractions that may or may not have contributed to the crash. Distraction for a non-motorist occurs when a non-motorist's attention is diverted from the task of navigating in public to some other activity. Also, NHTSA identifies daydreaming or lost in thought as distractions. NHTSA does not identify physical conditions/impairments (fatigue, alcohol, medical condition, etc.) or psychological states (anger, emotional, depressed, etc.) as distractions.

**NOTE:** *"Presence" is not the same as an activity associated with the person or item. The non-motorist needs to be engaged in some activity associated with the thing that is causing a distraction. Just having a mobile phone, sandwich, other non-motorist, etc., nearby isn't a distraction. The*

*distraction is when the non-motorist's attention is diverted from the task of navigating in public to using the phone, eating the sandwich, turning to talk to another non-motorist, etc. It doesn't have to be a contributing factor in the crash, but it does have to be in use, engaged, the person was doing it at the time, etc. for it to have been a distraction.*

**Remarks:** Record the attribute(s) that best describe this non-motorist's attention prior to the non-motorist's involvement in this crash. Intoxication, ill, blackout, asleep, or fatigued are not considered distractions. This information is captured under the data element [CONDITION \(IMPAIRMENT\) AT TIME OF CRASH](#).

NON-MOTORIST DISTRACTED BY is a "Select All That Apply" element. If the element values [00 \(Not Distracted\)](#), [17 \(Distraction/ Inattention\)](#), [18 \(Distraction/Careless\)](#), [19 \(Careless/Inattentive\)](#), [92 \(Distraction \[Distracted\], Details Unknown\)](#), [93 \(Inattention \[Inattentive\], Details Unknown\)](#), [96 \(Not Reported\)](#), or [99 \(Reported as Unknown if Distracted\)](#) are selected, then only that one element value may be used.

### **Witness Statements:**

See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

### **00 (Not Distracted)**

- When the case material indicate that the individual was completely attentive.
- When the case material does not indicate a distraction in an available field, and not reporting a distraction in that field indicates 00 (Not Distracted).
- For omission of information see [96 \(Not Reported\)](#) guidance below.

**02 (By Other Non-Motorist[s])** is used when the non-motorist was distracted by another non-motorist prior to becoming involved. Examples include conversing with, looking at, or otherwise interacting with another Non-Motorist.

**03 (By a Driver or Occupant of a Motor Vehicle)** is used when the non-motorist was distracted by a Driver or Occupant of a Motor Vehicle prior to becoming involved (e.g., conversing with, watching, other interactions).

**12 (Distracted by Animal, Other Object, Event, or Activity)** is used when the non-motorist was distracted by an animal, object, event, or activity prior to becoming involved in the crash. Examples include, distractions related to pet walking, animals on the roadside, a previous crash, non-traffic related signs (advertisements, electronic billboards, etc.) grooming activities, opening an umbrella, flying insects, etc.

**05 (While Talking or Listening to Mobile Phone)** is used when the non-motorist is talking or listening on a mobile phone. This attribute includes talking or listening on a "hands-free" or Bluetooth enabled phone. This attribute also includes listening to audio on a Mobile phone. For distractions related to manipulating the audio on a mobile phone, see [06 \(While Manipulating Mobile Phone\)](#). For distractions related to audio on a device other than a mobile phone, see [07 \(Adjusting or listening to Audio Device \[Other than Mobile Phone\]\)](#).

**06 (While Manipulating Mobile Phone)** is used when the non-motorist is dialing or text messaging (texting) on a mobile phone. Any manual button/control actuation on the phone qualifies. Examples include checking email, using the camera function to take a picture or record a video, manipulating audio, using the internet, GPS navigation, fitness apps, playing a game, etc. on the mobile phone. For

distractions related to listening to audio on a mobile phone, see [05 \(While Talking or Listening to Mobile Phone\)](#).

**15 (Other Mobile Phone Related)** is used when the case material indicates the non-motorist was distracted due to mobile phone involvement, but none of the specified codes are applicable (reaching for mobile phone, etc.). This attribute is also applied when specific details regarding mobile phone distraction/usage are not provided (*e.g., email, nonspecific mobile phone use*).

**07 (Adjusting or Listening to Portable Audio Device [Other than on a Mobile Phone])** is used when the non-motorist was distracted while adjusting, listening to, or using a radio, cassette player, CD player, or MP3 player (not on a mobile phone). For distractions related to audio on a mobile phone, see code [05 \(While Talking or Listening to Mobile Phone\)](#) and [06 \(While Manipulating Mobile Phone\)](#).

**08 (Adjusting, Talking to, or Manipulating Other Portable Electronic Device)** is used when the non-motorist is distracted while adjusting, talking to, or otherwise manipulating a portable electronic device that is not a mobile phone or audio player. Examples include digital camera, bike ride tracker, pedometer, laptop or tablet computer, gaming device, GPS navigation, etc.

**13 (Eating or Drinking)** is used when the non-motorist is eating or drinking or involved in an activity related to these actions (picking up food from a handheld carton, reaching to throw out used food wrapper, etc.).

**14 (Smoking Related)** is used when the non-motorist is smoking or involved in an activity related to smoking, such as lighting a cigarette, putting ashes in an outdoor ash tray, vaping, etc. Any method of lighting the cigarette would be coded **14 (Smoking Related)**. Chewing tobacco related distractions are coded under [98 \(Other Distraction \[Specify:\]\)](#).

**17 (Distraction/Inattention)** is used exclusively when “Distraction/Inattention” or “Inattention/Distraction” are noted in the case material as one combined attribute and it cannot be determined which NON-MOTORIST DISTRACTED BY attribute is intended, [92 \(Distraction \[Distracted\], Details Unknown\)](#) or [93 \(Inattention \[Inattentive\], Details Unknown\)](#).

**18 (Distraction/Careless)** is used exclusively when “Distraction/Careless” or “Careless/Distraction” are noted in the case material as one combined attribute and it cannot be determined which NON-MOTORIST DISTRACTED BY attribute applies.

**19 (Careless/Inattentive)** is used exclusively when “Careless/Inattentive” or “Inattentive/ Careless” are noted in the case material as one combined attribute and it cannot be determined which NON-MOTORIST DISTRACTED BY attribute applies.

**92 (Distraction [Distracted], Details Unknown)** is used when “distraction” or “distracted” are noted in the case material, but specific distraction(s) cannot be identified. For non-specific “inattention” see attribute

**93 (Inattention [Inattentive], Details Unknown).**

**93 (Inattention [Inattentive], Details Unknown)** is used when “inattention” or “inattentive” are noted in the case material, but it cannot be identified if this refers to a distraction(s).

**97 (Lost in Thought/Day Dreaming)** is used when the non-motorist is not completely attentive because he/she is thinking about items other than being aware of their surroundings. For non-specific “distraction” see element value [92 \(Distraction \[Distracted\], Details Unknown\)](#). For non-specific “inattention” see element value [93 \(Inattention \[Inattentive\], Details Unknown\)](#).

**98 (Other Distraction [Specify:])** is used when details regarding this non-motorist’s distraction are known but none of the specified codes are applicable (e.g., chewing tobacco related).

**\*Note: For** attributes with a “Specify:” designation, a fill-in text box will open in **RBIS**. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.

**96 (Not Reported)** Check to see if [00 \(Not Distracted\)](#) or [99 \(Reported as Unknown if Distracted\)](#) are more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”

Code **96 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown if Distracted)** is used when the case material specifically indicate unknown.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                                        | THEN                                                                                       |
|----------|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 4W3P     | RELATED FACTORS - PERSON (NOT A MOTOR VEHICLE OCCUPANT) LEVEL equals 091, | NON-MOTORIST DISTRACTED BY should equal 05, 06, 07, 08, or 15.                             |
| 4X0A     | NON-MOTORIST DISTRACTED BY equals 05, 06, 07, 08, or 15,                  | at least one RELATED FACTORS - PERSON (NOT A MOTOR VEHICLE OCCUPANT) LEVEL must equal 091. |
| 4X1A     | any NON-MOTORIST DISTRACTED BY equals 00, 17, 18, 19, 92, 93, 96, or 99,  | only that one code and no other must be used.                                              |
| 4X2C     | any NON-MOTORIST CONTRIBUTING CIRCUMSTANCES equals 06,                    | NON-MOTORIST DISTRACTED BY must not equal 00 or 96 or 99.                                  |
| 4X4A     | any NON-MOTORIST DISTRACTED BY equals 00, 96, or 99,                      | none of the NON-MOTORIST CONTRIBUTING CIRCUMSTANCES must equal 06.                         |

| <b>Error ID</b> | <b>IF</b>                                                   | <b>THEN</b>                                                           |
|-----------------|-------------------------------------------------------------|-----------------------------------------------------------------------|
| 4X5A            | NON-MOTORIST DISTRACTED BY does not equal 00, 96, or 99,    | at least one NON-MOTORIST CONTRIBUTING CIRCUMSTANCES should equal 06. |
| 4X6A            | <i>NON-MOTORIST DISTRACTED BY equals 17,</i>                | <i>STATE should equal GA, MN, MO, NV, NY, or SC.</i>                  |
| U300            | <i>Unlikely NON-MOTORIST DISTRACTED BY equals 18 or 19.</i> | --                                                                    |

## NM14 - Non-Motorist Safety Equipment

**FORMAT:** 6 Sets, 1 numeric.

**SAS NAMES:** Safetyeq.NMHELMET, Safetyeq.NMPROPAD, Safetyeq.NMOTHPRO, Safetyeq.NMREFCLO, Safetyeq.NMLIGHT, Safetyeq.NMOTHPRE

**ELEMENT VALUES:**

### PROTECTIVE Non-Motorist Safety Equipment

#### Subfield 1 - Non-Motorist Helmet Use

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

#### Subfield 2-Non-Motorist Use of Protective Pads

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

#### Subfield 3- Non-Motorist Use of Other Protective Safety Equipment

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

## PREVENTIVE Non-Motorist Safety Equipment

### Subfield 4-Non-Motorist Use of Reflective Clothing/Carried Item

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

### Subfield 5-Non-Motorist Use of Lighting

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

### Subfield 6-Non-Motorist Use of Other Preventive Safety Equipment

| Codes | Attributes                          |
|-------|-------------------------------------|
| 1     | <a href="#">No</a>                  |
| 2     | <a href="#">Yes</a>                 |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

**Definition:** This element identifies the safety equipment that was used and not used by this non-motorist as reflected in the case material.

**Remarks:** The applicable attribute may be determined using various items in the case material such as a crash report field, the officer narrative, a fatal crash supplement, etc. Each subfield is recorded separately using the same attribute choices ([No](#), [Yes](#), [Not Reported](#), and [Reported as Unknown](#)).

#### **General Guidance:**

1. Review the State police crash report fields, narrative, and diagram for indications of any safety equipment used.
2. The element allows for collecting any safety equipment in use if it can be classified as protective or preventive. Protective equipment is designed to mitigate injury, while preventive equipment is intended to avoid a crash from occurring. Examples of equipment that may be noted, and proper classification, are below.

|                                                                                                                     | Protective Subfields |         |                      | Preventive Subfields |                      |                      |
|---------------------------------------------------------------------------------------------------------------------|----------------------|---------|----------------------|----------------------|----------------------|----------------------|
| Safety Equipment Described                                                                                          | 1-Helmet             | 2-Pads  | 3-Other              | 4-Clothing           | 5-Lighting           | 6-Other              |
| Helmet on a horseback rider                                                                                         | 2 (Yes)              |         |                      |                      |                      |                      |
| Reflective helmet                                                                                                   | 2 (Yes)              |         |                      | 2 (Yes)              |                      |                      |
| Personal inflatable devices                                                                                         |                      |         | 2 (Yes)              |                      |                      |                      |
| Lap belt in use on a wheelchair                                                                                     |                      |         | 2 (Yes)              |                      |                      |                      |
| Child seat used in an Amish buggy                                                                                   |                      |         | 2 (Yes)              |                      |                      |                      |
| 3-Point belt used by toddler in a bicycle trailer                                                                   |                      |         | 2 (Yes)              |                      |                      |                      |
| Bicycle reflectors or flags                                                                                         |                      |         |                      |                      |                      | 2 (Yes)              |
| Safety flags or triangles on a non-motorist conveyance                                                              |                      |         |                      |                      |                      | 2 (Yes)              |
| Day-Glo/Hi-Glo clothing                                                                                             |                      |         |                      |                      |                      | 2 (Yes)              |
| “Mr. Johnson was wearing a Hi-Glo orange hunting vest.”                                                             |                      |         |                      |                      |                      | 2 (Yes)              |
| “The pedestrian was not using any safety equipment.”                                                                | 1 (No)               | 1 (No)  | 1 (No)               | 1 (No)               | 1 (No)               | 1 (No)               |
| The cyclist didn’t use a headlight and was in violation of “Required to Use a Headlight at Night.”                  |                      |         |                      |                      | 8 (N/R) <sup>1</sup> |                      |
| “Other” checked, not specified                                                                                      |                      |         | 8 (N/R) <sup>2</sup> |                      |                      | 8 (N/R) <sup>3</sup> |
| “No Helmet” or “Not wearing a Helmet” is the ONLY indication on a crash report where only one field may be checked. | 1 (No)               | 8 (N/R) | 8 (N/R)              | 8 (N/R)              | 8 (N/R)              | 8 (N/R)              |
| “It’s unknown if the cyclist was using any safety equipment”                                                        | 9 (R/U)              | 9 (R/U) | 9 (R/U)              | 9 (R/U)              | 9 (R/U)              | 9 (R/U)              |
| “Contrasting Clothing”                                                                                              | 8 (N/R)              | 8 (N/R) | 8 (N/R)              | 8 (N/R)              | 8 (N/R)              | 8 (N/R)              |

1. Knowing that a headlight was not in use does not mean that the cyclist was not using any lighting.
2. Unless another piece of protective equipment was checked as “Used” in a crash report field that would translate to a FARS/CRSS “Other” protective, e.g., a field labeled “Eyewear.”
3. Unless another piece of preventive equipment was checked as “Used” in a crash report field that would translate to a FARS/CRSS “Other” preventive, e.g., a field labeled “Rollerblade Stoppers.”
3. N/R: Not Reported
4. R/U: Reported as Unknown

3. Note that when a piece of safety equipment noted is mentioned only as “Other” and is not specified anywhere in the case material, both the Protective and Preventive subfields for “Other” must be coded as **8 (Not Reported)**, unless another piece of equipment is mentioned that qualifies for the FARS/CRSS code “Other.” The reason for this is that there is no analytical value to collecting unknown equipment in use without a minimum classification of Protective or Preventive. See **table notes** two and three above.

4. Complete the Protective and Preventive equipment subfields in **RBIS**, assessing whether each category of safety equipment was used [2 \(Yes\)](#), not used [1 \(No\)](#), there is no information regarding the category [8 \(Not Reported\)](#), or the officer indicated that safety equipment use was unknown [9 \(Reported as Unknown\)](#).

### ***PROTECTIVE Non-Motorist Safety Equipment***

**Subfield 1- Non-Motorist Helmet Use** is used to identify if the case material indicate the non-motorist was wearing a safety helmet. The non-motorist does not have to be riding a bicycle at the time of the crash to code this subfield as [2 \(Yes\)](#).

[2 \(Yes\)](#) includes all helmets (bicycle helmet, motorcycle helmet, racing helmets, etc.). If the non-motorist was wearing a motorcycle helmet, see [RELATED FACTORS - PERSON \(NOT A MOTOR VEHICLE OCCUPANT\) LEVEL](#) attribute [093 \(Non-Motorist Wearing Motorcycle Helmet\)](#). For example, a pedestrian that previously was riding a motorcycle gets struck while still wearing their helmet.

**Subfield 2- Non-Motorist Use of Protective Pads** is used to identify if the case material indicate the non-motorist was wearing padded, shaped attachments to protect specific areas of the body (elbows, knees, shins, etc.) from injury.

**Subfield 3- Non-Motorist Use of Other Protective Safety Equipment** is used to identify if the case material indicate the non-motorist was using protective safety equipment other than a helmet or pads (eye wear/face shields, gloves, wrist guards, etc.). If other safety equipment is noted in the case material and it cannot be determined if it is preventive or protective, use code [8 \(Not Reported\)](#).

### ***PREVENTIVE Non-Motorist Safety Equipment***

**Subfield 4-Non-Motorist Use of Reflective Clothing/Carried Item** is used to identify if the case material indicate the non-motorist was wearing or carrying some type of reflective item (jacket, backpack, vest, etc.). The emphasis is on the reflective property of the clothing or carried item and does not include devices that give off light under their own power (e.g., flashlights). For lighting, use [Subfield 5- Non-Motorist Use of Lighting](#). The reflective item can be reflective tape affixed to regular clothing, special reflective clothing, a reflective device that is worn or a reflective device that is carried. It can be made by the non-motorist and does not have to be specially designed as a safety device.

Do not code bicycle reflectors or clothing that is non-reflective but considered to be safety equipment (hi-glo orange clothing) here, use [Subfield 6- Non-Motorist Use of Other Preventive Safety Equipment](#) instead. Subfield 4 is used only for clothing or equipment that is both reflective and worn or carried.

**Subfield 5- Non-Motorist Use of Lighting** is used to identify if the case material indicate the non-motorist was using a light on his/her person or on a pedalcycle or personal conveyance for safety purposes, to include flashlights.

**Subfield 6- Non-Motorist Use of Other Preventive Safety Equipment** is used to identify if the case material indicate the non-motorist was using preventive safety equipment other than a reflective clothing/carried item or light (bicycle reflectors and flags, reflectors and triangles on a buggy, Hi-Glo orange clothing, rollerblade stoppers, etc.). If other safety equipment is noted in the case material and it cannot be determined if it is preventive or protective, use code [8 \(Not Reported\)](#).

***The following attributes apply to all 6 subfields:***

**1 (No)** is used when the case material identifies this non-motorist did not use this type of safety equipment.

**2 (Yes)** is used when the case material identifies this non-motorist used this type of safety equipment.

**8 (Not Reported)** is used when the case material does not provide sufficient information to identify if this non-motorist did **2(Yes)** or did not **1 (No)** use this type of safety equipment. ***Check to see if 1 (No) or 9 (Reported as Unknown) are more appropriate for the situation.***

**9 (Reported as Unknown)** is used when the case material identifies it is unknown if this non-motorist used this type of safety equipment.

**Consistency Checks [\(See Section 400\)](#):**

[\\* See Specific Drug Listings](#)

**\*\* Test Result does not include aspirin, nicotine, or ethanol. Alcohols reported other than ethanol would be classified under [996 \(Other Drug\)](#).**

**Definition for Drug Test Status:** This element identifies if a chemical test for the presence of drugs was given to this person.

**Definition for Drug Specimen:** This element identifies the bodily tissue or fluid used to perform a chemical test for the presence of drugs in this person.

**Definition for Drug Test Result:** This element records the result of a chemical test for the presence of drugs in this person.

**Remarks:** This element's values and remarks are identical to the Person Level (MV Occupant) Level element DRUG TOXICOLOGY RESULTS. Please see [DRUG TOXICOLOGY RESULTS](#) for remarks.

See [Alphabetical Drug Index](#) and [Drugs by Category](#) under element DRUG TOXICOLOGY RESULTS. Also reference "[Examples for Interpreting Drug Tests](#)" under element DRUG TOXICOLOGY RESULTS.

**Consistency Checks ([See Section 400](#)):**

## NM25/P25 - Death Time - FARS Only

**FORMAT:** 4 numeric

**SAS NAME:** Person.DEATH\_HR, Person.DEATH\_MN, Person.DEATH\_TM

### ELEMENT VALUES:

| Codes     | Attributes                                     |
|-----------|------------------------------------------------|
| 8888      | Not Applicable (Non-fatal)                     |
| 0000-2359 | Valid Military Time                            |
| 0099-2399 | <a href="#">Known Hour but Unknown Minutes</a> |
| 9999      | <a href="#">Unknown</a>                        |

**Definition:** This element identifies the hour and minute of this person's death using the 24-hour clock format.

**Remarks:** This element's values and remarks are identical to the Person Level (MV Occupant) Level element DEATH TIME. Please see [DEATH TIME](#) for remarks.

**See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.**

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                                                                  | THEN                                                                                                 |

**\*FARS ONLY ATTRIBUTES**

**Definition:** This element identifies factors related to people not in a motor vehicle expressed in the case material.

**Remarks:** Code information provided in the case material associated with this person.

The following lists those related factors that may be used for each [PERSON TYPE](#):

| Person Type                                                                               | Valid Related Factors                                                                                                        |
|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">04 (Occupant of a Non-Motor Vehicle Transport Device)</a>                     | 000, 008, 009, 010, 018, 021, 026, 031, 037, 040-042, 051, 052, 056, 057, 060-070, 072-078, 080-083, 087, 091, 093, 097, 999 |
| <a href="#">05 (Pedestrian)</a>                                                           | 000, 008, 009, 010, 018, 031, 037, 041, 053-056, 060-067, 072, 087, 090, 091, 093-097, 101, 999                              |
| <a href="#">06 (Bicyclist)</a>                                                            | 000, 008, 010, 018, 021, 026, 031, 037, 040-042, 051-057, 060-068, 072-078, 080-083, 087, 091, 093-097, 100, 101, 999        |
| <a href="#">07 (Other Cyclist)</a>                                                        | 000, 008, 010, 018, 021, 026, 031, 037, 040-042, 051-057, 060-068, 072-078, 080-083, 091, 093, 101, 999                      |
| <a href="#">10 (Persons In/On Buildings)</a>                                              | 000, 008, 010, 013, 018, 026, 031, 087, 093, 999                                                                             |
| <a href="#">11 (Person on Motorized Personal Conveyance)</a>                              | 000, 008, 010, 013, 018, 021, 026, 031, 037, 040-042, 051-057, 060-070, 072-078, 080-083, 087, 091, 093, 100, 101, 999       |
| <a href="#">12 (Person on Non-Motorized Personal Conveyance)</a>                          | 000, 008, 010, 018, 021, 026, 031, 037, 040-042, 051-057, 060-070, 072-078, 080-083, 087, 091, 093, 100, 101, 999            |
| <a href="#">13 (Person on Personal Conveyance, Unknown if Motorized or Non-Motorized)</a> | 000, 008, 010, 018, 021, 026, 031, 037, 040-042, 051-057, 060-070, 072-078, 080-083, 087, 091, 093, 100, 101, 999            |
| <a href="#">09 (Unknown Type of Non-Motorist)</a>                                         | 000, 008, 009, 010, 018, 021, 026, 031, 037, 040-042, 051-057, 060-068, 072-078, 080-083, 086, 087, 091, 093-097, 101, 999   |

**000 (None)** is used when no applicable related factors are noted in the crash report *for this person*.

**\*008 (Mentally Challenged)** is used when the case material identifies *this person has an intellectual, cognitive, or developmental disability*.

**009 (Construction/Maintenance/Utility Worker)** is used when the case material identifies that this was a non-motorist working with the highway department, a contractor, or a utility company at the time of the crash.

**010 (Alcohol and/or Drug Test Refused)** is used when the officer notes that this person refused to take an alcohol and/or a drug test. Refusing a test does not necessarily mean that a test was not given. It is possible that after a refusal, the officer may have obtained a warrant or some other authorization to

administer a test post-refusal. This includes when the person initially refuses and later consents. Because of this, it is possible to code **010 (Alcohol and/or Drug Test Refused)** and also code an actual test with results for the same person.

**013 (Motorized Wheelchair Rider)** is used when the case material identifies the non-motorist is in a motorized wheelchair (personal conveyance). *The PERSON TYPE for this person must be [11 \(Person on Motorized Personal Conveyance\)](#).*

**\*018 (Mother of Dead Fetus/Mother of Infant Born Post Crash)** is used when the case material identifies that this non-motorist is the mother of a fetus that died in or as a result of this crash or it is identified that this non-motorist gave birth after the crash whether the child survives or not. Note that for crash classification purposes, a fetus is considered to be part of a pregnant woman rather than a separate individual and, thus, is not counted as a separate person in the crash.

**\*021 (Overloading or Improper Loading of Vehicle with Passengers or Cargo)** is used when the case material describe more than one non-motorist is occupying one seating position at the time of the crash. For example, overloading a bicycle with a passenger riding on the handlebars.

**\*026 (Following Improperly)** is used when the case material identifies that this non-motorist was following a bicyclist, motor vehicle, non-motor vehicle transport device, or person on a personal conveyance too closely as to create a dangerous situation.

**Examples include:**

- A non-motorist (bicyclist, skateboard rider, rollerblader, etc.) who attempts to grab on to a motor vehicle that is in-transport.
- A bicyclist is following a vehicle so closely that as it passes or takes an avoidance maneuver around one vehicle going in the same direction as the bicyclist, the bicyclist strikes the rear of the vehicle it was attempting to pass or the rear of another vehicle in the adjacent lane also going the same direction.

**\*037 (Traveling on Prohibited Trafficways)** is used when the case material identifies that this non-motorist was traveling on an open trafficway that prohibited travel for their mode of transportation. This applies to all forms of pedestrian travel (skateboard riders, rollerbladers, etc.), as well as horseback riders, carriages, bicyclists, etc.

**\*040 (Passing Through or Around Barrier)** is used when the case material identifies this non-motorist was traveling through or around a “demarcated” area to be in a prohibited area (street closed for a parade, construction, sidewalk closed, etc.).

**\*041 (Failure to Observe Warnings or Instructions on Vehicles Displaying Them)** is used when the case material identifies this non-motorist failed to heed warnings or follow instructions displayed on other vehicles.

**Examples include:**

- A non-motorist failed to follow construction instructions (e.g., arrows directing traffic mounted on a vehicle) or instructions on emergency vehicles (ambulances, fire trucks, police cars).
- A non-motorist failed to observe right-turn warning on a truck or buses.
- A bicyclist failed to heed hazard lights on a disabled vehicle.

- A child failed to walk around the school bus arm that was extended into the travel lane that permitted the bus driver to see the child in the roadway.

**\*042 (Failure to Signal Intentions)** is used when the case material identifies this non-motorist failed to signal their intentions as required. This attribute includes a failure to signal by either lamp turn signal or hand.

**\*051 (Operator Inexperience)** is used when the case material identifies this non-motorist's (horseback rider, skate boarder, bicyclist without training wheels, etc.) lack of experience contributed to their involvement. Should be expressed by officer and not presumed based on age.

**\*052 (Unfamiliar with Roadway)** is used when the case material identifies this non-motorist's (horseback rider, skate boarder, bicyclist without training wheels, etc.) lack of familiarity with the area/location where the crash occurred contributed to their involvement. Should be expressed by officer and not presumed based on age.

**053 (NM Previously Used a Motor Vehicle for Motion)** is used when the case material identifies this Non-Motorist was known to have been using a motor vehicle in-transport for the purpose of motion just prior to the onset of the unstabilized situation (e.g., "skitching"). This person may have been connected to the motor vehicle in-transport by any means (hand grasp, tow rope, etc.) and could be or could have been using a non-motorist device (bicycle, skateboard, hoverboard, sled, etc.) while connected. It must be clear that the person was no longer connected at the onset of the unstabilized situation. Also see NON-MOTORIST CONTRIBUTING CIRCUMSTANCES code [18 \(Operating in Other Erratic, Reckless, Careless, or Negligent Manner\)](#) to see if it applies. Unintentionally losing connection to a motor vehicle must not be the onset of the unstabilized situation (see SEATING POSITION [56 \[Appended to a Motor Vehicle for Motion\]](#)).

**054 (NM Attempting to Use a Motor Vehicle for Motion)** is used when the case material identifies this Non-Motorist was known to have been attempting to use a motor vehicle for the purpose of motion prior to the onset of the unstabilized situation (e.g., "skitching"). This person could have been attempting to connect to the motor vehicle in-transport by any means (hand grasp, tow rope, etc.) and could be or could have been using a non-motorist device (bicycle, skateboard, hoverboard, sled, etc.) while attempting to make connection. It must be clear that the non-motorist was attempting to connect and not already connected or previously connected at the onset of the unstabilized situation. Also see NON-MOTORIST CONTRIBUTING CIRCUMSTANCES code [18 \(Operating in Other Erratic, Reckless, Careless, or Negligent Manner\)](#) to see if it applies.

**055 (NM Attempting to Use or Previously Used a Motor Vehicle for Motion, Details Not Reported)** is used when the case material identifies this Non-Motorist was known to have been either previously using or attempting to use a motor vehicle in-transport for the purpose of motion prior to the onset of the unstabilized situation ([Code 053](#) or [Code 054](#)); however, the case material does not provide enough information to specify one code or the other. It must be clear that the person was not connected to a motor vehicle in-transport at the onset of the unstabilized situation. (See SEATING POSITION [56 \[Appended to a Motor Vehicle for Motion\]](#).) Also see NON-MOTORIST CONTRIBUTING CIRCUMSTANCES code [18 \(Operating in Other Erratic, Reckless, Careless, or Negligent Manner\)](#) to see if it applies.

**056 (Non-Driver Flees Scene)** is used when the case material identifies this non-motorist left the scene of a hit-and-run crash.

**Examples Include:**

- A bicyclist clipped by a vehicle that runs off the road and overturns, leaves the scene on their bike.
- A pedestrian is pushing an occupied wheelchair, which is struck by a motor vehicle. The pedestrian panics and flees the scene.

**\*057 (Improper Tire Pressure)** is used when the case material identifies that improper tire pressure was present on one or more tires of a bicycle, non-motor vehicle transport device, or personal conveyance in use by this non-motorist. It signifies that improper tire pressure is not a defect, but rather the irresponsibility of this person.

**100 (Using a Shared Micromobility Device)** is used when this non-motorist was riding a device (non-motorized bicycle, e-scooter, etc.) that was part of a micromobility ride-share, transportation network company (TNC), mobility service provider (MSP), or similar, which connects paying customers seeking transportation with personal conveyances or non-motorized bicycles via websites and mobile apps.

**NOTE:** Motorized bicycles and e-bikes are considered motor vehicles. See NCSA BODY TYPE [81 \(Moped or Motorized Bicycle\)](#). Likewise, a person riding an e-bike would be considered a Motor Vehicle Occupant.

**Vision Obscured By:**

The following set of attributes identifies visual obstructions noted in the case material applicable to this non-motorist.

**\*060 (Rain, Snow, Fog, Smoke, Sand, Dust)**

**\*061 (Reflected Glare, Bright Sunlight or Headlights)**

**\*062 (Curve, Hill, or Other Design Features [including traffic signs, embankment])**

**\*063 (Building, Billboard or Other Structures)**

**\*064 (Trees, Crops or Vegetation)**

**\*065 (Motor Vehicle [including load])**

**Examples include:**

- A car stopped on the roadway.
- A tractor-trailer in-transport on the road.
- A school bus stopped for the purpose of loading and/or unloading children.

**\*066 (Parked Vehicle)**

**\*067 (Splash or Spray of a Passing Vehicle)**

**\*068 (Inadequate Lighting System)**

**\*069 (Obstructing Angles on the Vehicle)** is used when the case material identifies obstructing angles on this person's vehicle. This attribute should not be confused with visual obstructions from other vehicles. (See **065 (Motor Vehicle [including load])** and **066 (Parked Vehicle)**).

**\*070 (Mirrors)** is used when the case material identifies that this non-motorist's vision was obscured by any type of mirror.

**\*072 (Other Visual Obstruction)** is used when the case material identifies that this non-motorist's vision was obscured by something other than previously listed. For example, a trailer that has been left parked on the side of the road by a truck or vehicle.

### ***Skidding, Swerving, Sliding Due To:***

***This set of attributes is applicable to a non-motorist that attempted to avoid and/or lost control due to one of the following—and resulted in that non-motorist's skidding, swerving, or sliding.***

**\*073 (Severe Crosswind)** is used when the case material identifies this non-motorist's control loss was related to severe crosswinds.

**\*074 (Wind from Passing Truck)** is used when the case material identifies this non-motorist's control loss was related to winds produced by a passing truck.

**\*075 (Slippery or Loose Surface)** is used when the case material identifies this non-motorist's control loss was related to the surface composition of the roadway and/or the condition of that composition. Not to be used when the surface is slippery due to environment conditions such as rain, ice or snow (see [083 \(Ice, Snow, Slush, Water, Sand, Dirt, Oil, Wet Leaves on Road\)](#)).

#### **Examples include:**

- A slippery surface that is old or worn resulting in loose gravel on the roadway.
- Blacktop that is slick as a newly paved surface.

**\*076 (Tire Blowout or Flat)** is used when the case material identifies this non-motorist's control loss was related to a tire blowout or flat.

**\*077 (Debris or Objects in Road)** is used when the case material identifies this non-motorist attempted to avoid or lost control as a result of debris in the road. Examples would include nails, glass, trash cans, tire retread, trash, dead animals, pile of sand, barricades, etc.

**\*078 (Ruts, Holes, Bumps in Road)** is used when the case material identifies this non-motorist attempted to avoid or lost control as a result of a road surface anomalies such as ruts, holes, dips, or bumps.

**\*080 (Vehicle in Road)** is used when the case material identifies this non-motorist attempted to avoid or lost control as a result of another vehicle in the road. This includes both contact and non-contact vehicles that remain at the scene.

**\*081 (Phantom Vehicle)** is used when the case material identifies this non-motorist attempted to avoid or lost control as a result of a non-contact vehicle that left the scene as described by the police officer.

**\*082 (Pedestrian, Pedal Cyclist, or Other Non-Motorist)** is used when the case material identifies this non-motorist attempted to avoid or lost control as a result of a pedestrian, a pedalcyclist, or other type of non-motorist.

**\*083 (Ice, Snow, Slush, Water, Sand, Dirt, Oil, Wet Leaves on Road)** is used when the case material identifies this non-motorist's control loss was related to a substance on the roadway that caused the roadway to be slick, which may interfere with the traction of the vehicle. This attribute does not include part of the roadway composition. For cases involving roadway composition issues, see [075 \(Slippery or Loose Surface\)](#).

***Other Non-Motorist Factors:***

**087 (Police or Law Enforcement Officer)** is used when the case material identifies that this non-motorist was a police or law enforcement officer **working** at the time of the crash. The officer may be affiliated at the Federal, State, or local law enforcement level. This would also include military and park police, border patrol officers, and all other sworn law enforcement officers.

**094 (Emergency Medical Services Personnel)** is used when the case material identifies that this person was described as emergency medical services (EMS) personnel.

**095 (Fire Personnel)** is used when the case material identifies that this person was fire personnel.

**096 (Tow Operator)** is used when the case material identifies that this person was an operator of a tow truck.

**097 (Transportation (i.e., maintenance workers, safety service patrol operators, etc.))** is used when the case material indicate this person was working to assist with detouring traffic, maintaining roadway damage, or a safety service patrol operator, etc.

**090 (Non-Motorist Pushing a Vehicle)** is used when the case material identifies the non-motorist was pushing a vehicle.

**091 (Portable Electronic Devices)** is used when the case material identifies that this non-motorist was using an electronic device (mobile phone, MP3 player, PDA, etc.) that was somehow related to the crash occurrence.

**093 (Non-Motorist Wearing Motorcycle Helmet)** is used when the materials identify that this non-motorist was wearing a motorcycle helmet. This can apply to a pedestrian, bicyclist, or other non-motorist. For example, a pedestrian that previously was riding a motorcycle gets struck while still wearing their helmet.

**031 (Default Code Used for Vehicle Numbering)** is used when it cannot be determined from the case material which vehicle hit the non-motorist. See guidance under [VEHICLE NUMBER OF MOTOR VEHICLE STRIKING NON-MOTORIST](#).

**101 (Obstructed Sidewalk (for this Person))** is used when the case material indicate that a sidewalk was in the vicinity of the crash but was not available for use for this person because it was somehow obstructed. For example, the obstruction could be due to construction, snow or ice, people, or other objects preventing the use of the sidewalk.

**999 (Reported as Unknown)** is used when the circumstances surrounding the crash are unknown and reported as "unknown" by the investigating officer.

Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                        | THEN                                                                                                                                                                         |

## **Supplemental Data Elements - FARS Only**

**Person Level Elements** - Including Coding Instructions.

- [SP1 - Death Certificate Number](#)
- [SP2 - Fatal Injury at Work](#)
- [SP3 - Race/Hispanic Origin](#)

## SP1 - Death Certificate Number - FARS Only

**FORMAT:** Element Completed in *RBIS*

**SAS NAME:** Person.CERT\_NO

### ELEMENT VALUES:

| Codes | Attributes                      |
|-------|---------------------------------|
| 0s    | Not Applicable (not a fatality) |
| --    | Any Numeric Characters          |
| 9s    | Unknown                         |

**Definition:** This element identifies the four-digit GSA code for the city where the death occurred, the two-digit State number, and the six-digit sequence number from the death certificate as assigned by the State Vital Statistics or Vital Records Department.

**Remarks:** Code the sequence number from the death certificate as assigned by your State Vital Statistics Department. The sequence number is six digits in length and is part of the State File Number.

The format for coding the numbers is as follows:

- First four digits \_\_\_\_ City (where death occurred)
- Next two digits \_\_ State (where death occurred)
- Last six digits \_\_\_\_\_ Sequence Number (as assigned by State Vital Statistics Department)

If this person is not a fatality, zero-fill this element.

Use GSA codes for the city and State where the death occurred according to the death certificate. These are the same GSA codes used for the [City variables in the Crash Level Form](#):

- 0000 - Not a fatality or death not within city limits and no location code is available.
- 0001-9996 - GSA Geographical Location Codes.
- 9997 - Other (Death within city limits, but no GSA code available for this city).
- 9999 - Unknown (City where death occurred cannot be found on death certificate).

The State codes are the same as those used for variables [C1, V1, D1, PC1, P1, and NM1 State Number](#).

If the fatal crash occurred in your State, but the death occurred in a hospital of another State, please attempt to obtain the death certificate from that State and code the city and State where the death occurred.

If a person dies at the crash scene, code the appropriate city code or location code for the crash location. Code "0000" if the location is not within a city, and no geographical location code is available.

If the location is not within a city, but a geographical location code is available, use the location code.

If a person is transported by EMS and dies en route or at the hospital, use the city code for the hospital's location.

Code the exact sequence number as indicated on the death certificate. If the sequence number is less than six-digits long (e.g., the sequence number is “12345” (five digits)) right-justify your coded number and zero-fill the first (and/or second digit) (e.g., 012345).

Note that if you receive a copy of the death certificate from the medical examiner or coroner, it may not contain the sequence number. The sequence number needed is the one assigned by your State Vital Statistics or Vital Records Department, which is subsequently sent to the National Center for Health Statistics. In those instances, leave the sequence number blank until you are able to obtain it in a follow-up effort with your Vital Statistics Department.

If the sequence number contains a letter in it (e.g., N12345), simply ignore the letter and code the numbers only (right justified), (e.g., 012345).

If the death certificate number cannot be obtained, 9-fill this element.

If the death certificate number can be obtained, but is not yet received, leave this element blank until the number is available.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                | <b>THEN</b>                                             |
|-----------------|----------------------------------------------------------|---------------------------------------------------------|
| 7E0P            | INJURY SEVERITY equals 4,                                | DEATH CERTIFICATE NUMBER must NOT equal 0000-00-000000. |
| 7F0P            | DEATH CERTIFICATE NUMBER is not blank or 0000-00-000000, | INJURY SEVERITY must equal 4.                           |

## SP2 - Fatal Injury At Work - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Person.WORK\_INJ

**ELEMENT VALUES:**

| Codes | Attributes                                      |
|-------|-------------------------------------------------|
| 0     | <a href="#">No</a>                              |
| 1     | <a href="#">Yes</a>                             |
| 8     | <a href="#">Not Applicable (not a fatality)</a> |
| 9     | <a href="#">Unknown</a>                         |

**Definition:** This element indicates if the death certificate identified this person as being “at work” at the time of the crash.

**Remarks:** THE DEATH CERTIFICATE INDICATES WHETHER THE VICTIM WAS ON-THE-JOB AT THE TIME OF FATAL INJURY.

**0 (No)** is used if the injury **was not** at work.

**1 (Yes)** is used if the injury **was** on the job.

**8 (Not Applicable (not a fatality))** is used if the victim was not a fatality.

**9 (Unknown)** is used if the death certificate does not indicate whether the injury was at work or if you do not have access to death certificate information.

**FATAL INJURY AT WORK SHOULD ONLY BE DETERMINED FROM THE DEATH CERTIFICATE, NOT FROM ANY OTHER SOURCE. HOWEVER, IT IS NOT NECESSARY TO HAVE A COPY OF THE DEATH CERTIFICATE.**

**Consistency Checks** [\(See Section 400\)](#):

| 99    | <a href="#">Unknown</a>                                        |

**Definition:** This element indicates the Race and Hispanic origin of this person from the death certificate.

**Remarks:** Race and Hispanic Origin should be obtained from **the death certificate only**.

Both RACE and HISPANIC ORIGIN are coded for fatal victims only ([INJURY SEVERITY](#) on this person must be [Fatal Injury](#)). If INJURY SEVERITY is coded other than **Fatal Injury** on the Person Level, the **RBIS** will automatically enter “0s” in both the RACE and HISPANIC ORIGIN fields.

## **Single Race**

If the death certificate lists only one race, select from the following list. If more than one race is listed on the death certificate for this person, see the guidance for [Multiple Races](#) below.

**001 (White)** should be coded for people listed as White, Mexican, Puerto Rican, Cuban, Caucasian, or similar for race.

**002 (Black or African American)** should be coded for people listed as Black, African American, or similar for race.

**003 (North American Indian or Alaska Native)** should be coded for people listed as Canadian Indian, Mexican Indian, American Indian, Native American, Alaska Native, or similar for race. See [18 \(Asian Indian\)](#) for people listed as Indian (from India) and Pakistani and [19 \(Other Indian\)](#) for South and Central American Indians and any other Indians.

**004 (Chinese)** should be coded for people listed as Chinese for race.

**005 (Japanese)** should be coded for people listed as Japanese for race.

**006 (Native Hawaiian)** should be coded for people listed as Hawaiian or Native Hawaiian for race.

**007 (Filipino)** should be coded for people listed as Filipino for race.

**018 (Asian Indian)** should be coded for people listed as Asian Indian, Indian (from India), Pakistani, or similar for race.

**019 (Other Indian)** includes South and Central America and any other Indians, except North American or Asian Indians. See [03 \(North American Indian or Alaska Native\)](#) and [18 \(Asian Indian\)](#).

**028 (Korean)** should be coded for people listed as Korean for race.

**038 (Samoan)** should be coded for people listed as Samoan for race.

**048 (Vietnamese)** should be coded for people listed as Vietnamese for race.

**058 (Guamanian or Chamorro)** should be coded for people listed as Guamanian or Chamorro for race.

**068 (Other Asian or Pacific Islander)** is used when a specific “Other Asian” or “Pacific Island” race is listed, and it is other than [04 \(Chinese\)](#), [05 \(Japanese\)](#), [06 \(Native Hawaiian\)](#), [07 \(Filipino\)](#), [18 \(Asian Indian\)](#), [28 \(Korean\)](#), [38 \(Samoan\)](#), [48 \(Vietnamese\)](#), or [58 \(Guamanian or Chamorro\)](#). This attribute should be coded for people listed as Bangladeshi, Burmese (also Myanmar), Cambodian, Fijian, Indonesian, Laotian, Malaysian, Micronesian, Mongolian, Polynesian, Thai, Tibetan, Tongan, or similar for race.

**078 (Asian or Pacific Islander, No Specific [individual] Race)** should be coded for people listed as Asian, Cantonese, Eurasian, Pacific Islander, or similar for race.

**097 (Multiple Races, Unspecified)** is used when the death certificate indicates more than one race without specifying the individual races (“mixed,” “multiple races,” “multiracial,” etc.).

**098 (Other Race)** is used if an individual race listed on the death certificate or report is not one of the other attributes.

## **Multiple Races**

If the death certificate lists more than one race, select from the following list. If only one race is listed on the death certificate for this person, see the guidance for [Single Race](#) above. Codes selected from the Multiple Race table in **RBIS** must be accompanied by at least one other code in the table. The exceptions are **219 (Multiple Race - Other Indian)**, **268 (Multiple Race - Other Asian or Pacific Islander)**, and **298 (Multiple Race - Other Races)** that can be used on their own or coded along with another code. Select all codes that apply to this person. Order your selections by the order they are presented on the death certificate.

**201 (Multiple Race - White)** should be coded for people listed as White, Mexican, Puerto Rican, Cuban, Caucasian, or similar for race.

**202 (Multiple Race - Black or African American)** should be coded for people listed as Black, African American, or similar for race.

**203 (Multiple Race - North American Indian or Alaska Native)** should be coded for people listed as Canadian Indian, Mexican Indian, American Indian, Native American, Alaska Native, or similar for race. See [218 \(Multiple Race - Asian Indian\)](#) for people listed as Indian (from India) and Pakistani and [219 \(Multiple Race - Other Indian\)](#) for South and Central American Indians and any other Indians.

**204 (Multiple Race - Chinese)** should be coded for people listed as Chinese for race.

**205 (Multiple Race - Japanese)** should be coded for people listed as Japanese for race.

**206 (Multiple Race - Native Hawaiian)** should be coded for people listed as Hawaiian or Native Hawaiian for race.

**207 (Multiple Race - Filipino)** should be coded for people listed as Filipino for race.

**218 (Multiple Race - Asian Indian)** should be coded for people listed as Asian Indian, Indian (from India), Pakistani, or similar for race.

**219 (Multiple Race - Other Indian)** includes South and Central America, any others, except North American or Asian Indians. See [203 \(Multiple Race - North American Indian or Alaska Native\)](#) and **218 (Multiple Race - Asian Indian)**.

**228 (Multiple Race - Korean)** should be coded for people listed as Korean for race.

**238 (Multiple Race - Samoan)** should be coded for people listed as Samoan for race.

**248 (Multiple Race - Vietnamese)** should be coded for people listed as Vietnamese for race.

**258 (Multiple Race - Guamanian or Chamorro)** should be coded for people listed as Guamanian or Chamorro for race.

**268 (Multiple Race - Other Asian or Pacific Islander)** is used when a specific “Other Asian” or “Pacific Island” race is listed, and it is other than [204 \(Multiple Race - Chinese\)](#), [205 \(Multiple Race - Japanese\)](#), [206 \(Multiple Race - Native Hawaiian\)](#), [207 \(Multiple Race - Filipino\)](#), [218 \(Multiple Race - Asian Indian\)](#), [228 \(Multiple Race - Korean\)](#), [238 \(Multiple Race - Samoan\)](#), [248 \(Multiple Race - Vietnamese\)](#), or [258 \(Multiple Race - Guamanian or Chamorro\)](#). This attribute should be coded for people listed as Bangladeshi, Burmese (also Myanmar), Cambodian, Fijian, Indonesian, Laotian, Malaysian, Micronesian, Mongolian, Polynesian, Thai, Tibetan, Tongan, or similar for race.

**278 (Multiple Race - Asian or Pacific Islander, No Specific [individual] Race)** should be coded for people listed as Asian, Cantonese, Eurasian, Pacific Islander, or similar for race.

**298 (Multiple Race - Other Races)** is used if an individual race listed on the death certificate or report is not one of the other attributes.

Below is guidance for mapping RACE using the Centers for Disease Control and Prevention (CDC) Standard Death Certificate Race selections to FARS attributes.

| FARS Single Race                                                                                                           | FARS Multiple Races                                                                                                                                        | CDC Death Certificate RACE       |

| 68 Other Asian or Pacific Islander                                                                                         | 268 Multiple Race - Other Asian or Pacific Islander                                                                                                        | Other Pacific Islander           |
| 98 Other Race                                                                                                              | 298 Multiple Race - Other Races                                                                                                                            | Other                            |

### ***Hispanic Origin***

**06 (Hispanic Origin Not Specified, or Other Origin)** This includes when you know they are Hispanic, but the specific origin is not specified (e.g., Hispanic, Latino, Latin American, South American).

**99 (Unknown)** This person could be Hispanic, or not. You don't have enough information to determine whether they are Hispanic (e.g., all you know is that Race is "White," "Black," "European," or "Indian," and no other information is provided) or not.

If you receive a listing from the Vital Statistics Department, be sure you request a translation table for the code structure.

Below is guidance for mapping Hispanic Origin using the CDC's Standard Death Certificate Hispanic Origin selections to FARS attributes.

| <b>CDC Death Certificate HISPANIC ORIGIN</b> | <b>Map to FARS HISPANIC ORIGIN</b>                 |
|----------------------------------------------|----------------------------------------------------|
| No, not Spanish/Hispanic/Latino              | 07 Non-Hispanic                                    |
| Yes, Mexican, Mexican American, Chicano      | 01 Mexican                                         |
| Yes, Puerto Rican                            | 02 Puerto Rican                                    |
| Yes, Cuban                                   | 03 Cuban                                           |
| Yes, Other Spanish/Hispanic/Latino           | 06 Hispanic, Origin not Specified, or Other Origin |

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                        | <b>THEN</b>                                           |
|-----------------|------------------------------------------------------------------|-------------------------------------------------------|
| 7E1P            | INJURY SEVERITY equals 4,                                        | RACE must not equal 00.                               |
| 7E2P            | INJURY SEVERITY equals 4,                                        | HISPANIC ORIGIN must not equal 00.                    |
| 7E3P            | INJURY SEVERITY is not equal to 4,                               | RACE must equal 00 AND HISPANIC ORIGIN must equal 00. |
| 7F1P            | RACE equals 00,                                                  | INJURY SEVERITY must not equal 4.                     |
| 7F2P            | HISPANIC ORIGIN equals 00,                                       | INJURY SEVERITY must not equal 4.                     |
| 7F3P            | RACE is not equal to 00, and HISPANIC ORIGIN is not equal to 00, | INJURY SEVERITY must equal 4.                         |

## How to Create a Coding Question Ticket in the CDAN Helpdesk

2020 FARS/CRSS Coding Guide – How to Create a Coding Question Ticket in the CDAN Helpdesk

STEP 1: Go to your Single Sign-on page. Click on the CDAN Helpdesk button in the right column.

STEP 2: Hover your mouse over the “Tickets” tab at the top left, then select “Create Ticket” from the dropdown menu.

STEP 3: Your “Study” is **CRSS** or **FARS**. The Category is **Case Coding**. The Requestor is **Your Name**. Select the priority of your question (Low → Critical). The Unit is your **CRSS Assignment** or **FARS state**. The Sub Category is **Coding Question**. Assign the question to **Caitlin Elicker**. Enter in any email addresses if you wish to have other people cc-ed.

Select the ticket type (Issue or Request).

If you have a due date for the question, select the date.

STEP 4: Upload files, enter your issue, click on Save Ticket. **DO NOT REPLY TO THE SYSTEM-GENERATED EMAIL.** System-generated emails are notifications ONLY.

## 2020 FARS/CRSS Coding Guide – How to Create a Coding Question Ticket in the CDAN Helpdesk

**STEP 5:** Go to your Single Sign-on page. Click on the CDAN Helpdesk button in the right column. Check on your ticket by hovering your mouse over the “Tickets” tab then select “My Tickets” from the dropdown menu.

**STEP 6:** Open tickets will show under “Tickets Requested by Me.” Find the ticket you want and click on the blue Ticket #.

**STEP 7:** If you have received a response, it will show under the ticket’s details (e.g., Study, Ticket Created By, etc.). If the responder asks a question or for additional information, you will need to Update your ticket. Click on the “Update Ticket” button in the upper left to respond.

**STEP 8:** Upload files, type your response, check the “Email the comment” box, click on the “Save” button. **DO NOT REPLY TO THE SYSTEM-GENERATED EMAILS.** System-generated emails are notifications ONLY.

Hint

### Need to Reopen your ticket?

If your ticket is closed, you can reopen it if you need more guidance. Search for the ticket number in the search field at the top of the Helpdesk page. Change the Status to “Open,” type your comments in the “Comments” field, check the “Email the comment” box, then click “Save.”

### Reminders:

- Do not send emails for Coding Assistance
- Never send confidential information or documents through emails.
- Check on open tickets in the CDAN Helpdesk regularly, just in case you didn’t receive an email notification.
- **DO NOT REPLY** to the system-generated emails. System-generated emails are notifications ONLY.

## How to Create a Coding Question Ticket in RBIS

With the new release of the Records-Based Information Solution (RBIS), you can ask a coding question while coding a case. It is important that you continue to upload any pertinent case material to the question you are submitting using the “Case Documents” section. In addition, it is important to note that the person answering the question you submitted may not have access to see your coding of the case.

You can still create a coding question through the CDAN Helpdesk. This process has not changed but it is important to remember to continue uploading your case material to better assist.

**Step 1:** When you are in RBIS, select “Ask a Coding Question” from the task bar on the right side of the RBIS case data entry screen and enter your question. You can copy other people on your question in the “CC” field.

A screenshot of the 'Ask a Coding Question' form. At the top, it says 'Ask a Coding Question'. Below that is a field for 'CC (Please enter email addresses separated by comma)' with a text input box. To the right of this field are 'Submit' and 'Cancel' buttons. Below the CC field is a large text area for the 'Request / Issue Description'. A note below the text area says: 'Note: Please upload any supporting case materials associated with your request into the "Case Documents" section after submitting your question using the link on the left side of your case data entry screen. Any screenshots of RBIS etc., can be uploaded here.' At the bottom, there is a section for uploading files with instructions: 'Click on Browse Files and pick the file you would like to upload. When you have selected the file, click Open in the browser window. To drag and drop files from your computer, select files, drag them to into this location, and drop them. Only files with the following extensions are allowed: bmp, csv, doc, docx, gif, jpg, pdf, png, tiff, txt, xls, xlsx.' A 'Browse Files' button is located to the right of these instructions.

**Step 2:** After submitting your question, be sure to upload all case material that are relevant. You must upload case material via the “Case Documents” button on the left side of the RBIS case data entry screen.

In order for the ticket to be answered in a timely manner, make sure all the information needed to answer the question is uploaded. The ticket is automatically assigned to Caitlin Elicker who will then reassign the ticket to the appropriate person.

**Step 3:** Be sure to check your ticket's status in the CDAN Helpdesk frequently. The assignee may need additional information or have questions which may need a response from the ticket creator before the ticket can be resolved.

Remember not to reply to the automated emails that are generated when you create a ticket. Any updates to your question must be completed directly in the CDAN Helpdesk ticket.

## TIME: Crash Times, EMS Times, Death Times

### 2020 FARS/CRSS Coding Guide – TIME: Crash Time, EMS Times, Death Time

It is important to get the data elements that report Time from the correct source. Refer to the FARS/CRSS Coding and Validation Manual for detailed information. Below are general guidelines for all Time-related data elements.

**Format:** Code all official times in military times as received (00:00-23:59). All time formats are in hours and minutes. If you receive a time that includes the seconds' position, truncate to the reported minutes. Example: 10:51:35 would be 10:51.

#### **How to Code Midnight:**

In general, code midnight as 0000 in military time. Midnight is considered to be the beginning of a new day rather than the end of a day. One minute after midnight is 12:01 and is coded as 0001. However, there may be confusion over which day the source is referring to when "midnight" is cited or referred to without explanation. Our practice may not be the practice followed in your sources; therefore, you must determine which part of the day is being considered in your sources. The following are examples of midnight time references which do not easily translate to FARS and CRSS times.

- "midnight"
- 12:00-midnight
- 24:00

#### **End of Day:**

If your data sources give you a CRASH DATE and are consistent in talking about the end of that day, when they give a non-translatable "midnight" time reference of the crash, then you should code Crash Time as 2359.

#### **Beginning of Day:**

If your sources give a CRASH DATE and are consistent in referring to the beginning or early moments of that day when they give a non-translatable "midnight" crash time, code "midnight" as 0000.

**AM** - Starts at 00:00 Midnight

**PM** - Starts at 12:00 Noon

#### **Crash Time**

**Definition:** This element identifies the time at which the crash occurred.

Enter the time at which the crash occurred as shown on the Police Crash Report. This is the preferred time in all cases. If the crash time is not reported, unknown, or known to be in error, then all available information in the case materials should be used to determine Crash Time. If the hour cannot be determined, then enter **9999 (Unknown)**.

If the Police Crash Report indicates the crash occurred during some time interval of greater than one hour (e.g., 8:00 PM to 6:00 AM, or 8:00 AM to 5:00 PM), enter **9999 (Unknown)**. However, if the interval is one hour or less, code the midpoint of the interval.

#### **Examples:**

- 8:00 PM to 9:00 PM, enter **2030**
- 8:30 PM to 9:30 PM, enter **2100**
- 8:50 PM to 9:30 PM, enter **2110**

When the time is available, but AM versus PM is not shown on the Police Crash Report, base the time on the element LIGHT CONDITION (e.g., time is 10:00, LIGHT CONDITION is **2 (Dark - Not Lighted)**; code as **2200**).

## 2020 FARS/CRSS Coding Guide – TIME: Crash Time, EMS Times, Death Time

### Notification Time EMS – FARS Only

**Definition:** NOTIFICATION TIME EMS is the time Emergency Medical Service was notified.

Code NOTIFICATION TIME EMS and ARRIVAL TIME EMS no matter how much time has elapsed since the CRASH TIME. **Do not alter the times because of discrepancies with the CRASH TIME.** Code Notification Time of the **FIRST EMS** unit to arrive on the scene. If unknown minutes, code the actual hour and “99” for the minutes.

If the day of the crash and the day of EMS Notification have different dates, then be sure to see code **18 (Date of Crash and Date of EMS Notification Were Not the Same Day)** in RELATED FACTORS-CRASH LEVEL in the Coding Manual to see if it applies.

### Arrival Time EMS – FARS Only

**Definition:** ARRIVAL TIME EMS is the time Emergency Medical Service arrived on the crash scene.

Code NOTIFICATION TIME EMS and ARRIVAL TIME EMS no matter how much time has elapsed since the CRASH TIME. **Do not alter the times because of discrepancies with the CRASH TIME.** Code the arrival time of the **FIRST EMS** unit to arrive on the scene. If unknown minutes, code the actual hour and “99” for the minutes.

### EMS Time at Hospital – FARS Only

**Definition:** EMS TIME AT HOSPITAL is the time Emergency Medical Service arrived at the treatment facility (hospital, clinic, trauma center, etc.) to which it was transporting victims of the crash.

Code the EMS time at hospital of the unit **transporting the most severely injured victim.** The most severely injured victim includes (and usually is) the victim who dies en route to the treatment facility or later, but not the one who dies on-scene. **Do not alter the times because of discrepancies with the CRASH TIME.** If unknown minutes, code the actual hour and “99” for the minutes.

### Death Time – FARS Only

**Definition:** This element identifies the hour and minute of this person’s death utilizing the 24-hour clock format.

If minutes are unknown, code the actual hour and “99” for the minutes.

Normally, the medical examiner or coroner is the source of data for death time. If there are no data inconsistencies or errors, use the official death time as recorded on the Death Certificate. **Do not change the official death time without good cause.**

If it is known that the person died at the scene and the official death time or “pronounced death time” (on the Death Certificate) is known to be in error or is greater than 30 minutes after the crash time, then CRASH TIME is the appropriate DEATH TIME to be used. If it is known the person died at the scene, and the Time of Death is pronounced at the scene by a paramedic or firefighter, and this pronounced time does not contradict other case information, use this time.

**9999 (Unknown)** If the Death Certificate indicates the hour of death is unknown or provides a range greater than an hour, enter 9999 (Unknown).

## Crash Events Table, Vehicle Placement

### 2020 FARS/CRSS Coding Guide – Crash Events Table, Vehicle Placement

The **Crash Events Table** is filled out from the point of view of the **In-Transport Motor Vehicles** (Unit Type 1). Not In-Transport Motor Vehicles (Unit Types 2,3,4) are included in the table when they are contacted by an In-Transport Motor Vehicle or by something set-in-motion by an In-Transport Motor Vehicle.

MVITs can go in both sides of the table.

Each row must start with a MVIT.

| Event # | V# (This) | AOI (This) | SOE                                         | V# (Other) | AOI (Other) |
|---------|-----------|------------|---------------------------------------------|------------|-------------|
| 1       | MVIT      |            | 12 (MVIT)                                   | MVIT       |             |
| 2       | MVIT      |            | 14 (Parked MV)                              | Parked MV  |             |
| 3       | MVIT      |            | 45 (Working MV)                             | Working MV |             |
| 4       | MVIT      |            | 54 (Something Set-in-Motion by/from a MVIT) | MVIT       |             |
| 5       | MVIT      |            | 55 (MV in motion Outside the Trafficway)    | MVIT       |             |

Not In-Transport MVs can **ONLY** go in the Right side of the table.

#### Reminders:

- Coding of the Crash Events Table ends at the last Harmful Event in the crash.
- Not In-Transport Motor Vehicles cannot have Non-Harmful Events (e.g., Run off Roadway, Cross Centerline, etc.) in the Crash Events Table.
- SOE code **54** is **ONLY** for **two** Motor Vehicles In-Transport when one sets something into motion that strikes or is struck by the other.
- AOI code **18** is for cargo or vehicle parts set in motion, AOI code **19** is for something other than Cargo or vehicle parts (including people), and AOI code **20** is if you don't have enough information to tell if the thing(s) set-in-motion is/are 18 or 19.
- SOE is coded for vehicles, not their loads. For example, if the load of a vehicle (e.g., cargo, trailer, person, garbage can) crosses the centerline or goes off the roadway, it does not get coded in the Crash Events Table.
- Code 65 (Cross Median) is only used if the vehicle completely crosses the median and enters the opposing road.
- Code 69 (Re-entering Roadway) is only used if the vehicle departs its original roadway and then returns to that **same** roadway.

## Critical Crash Envelope Timeline

### 2020 FARS/CRSS Coding Guide - Critical Crash Envelope Timeline

**Narrative:** V1 went out of control on a wet roadway and struck the median guardrail with the front left side. The vehicle was redirected by the guardrail and re-entered the roadway, where it struck V2 on the driver side door with its front. V1 spun to a stop in the roadway. V2, out-of-control, ran off the right side of the roadway, struck and killed a pedestrian with its front, and then rolled over.

The Blue Brackets represent the beginning and ending of each vehicle's Critical Crash Envelope.

The coding for FARS/CRSS events ends at the LAST Harmful Event in the Crash.

## 2020 FARS/CRSS Coding Guide - Critical Crash Envelope Timeline

FARS/CRSS

## Precrash Critical Event Category Flowchart

## Interchanges

2020 FARS/CRSS Coding Guide - Interchanges

Photo by Joanna S. Reed

Interchange Area: ANSI D16.1 - 2007, 7<sup>th</sup> ed.

**2.5.14 grade separation:** A grade separation is a crossing at **different levels** of two trafficways, or a trafficway and a railway.

**2.5.16 interchange:** An interchange is a system of interconnecting roadways in conjunction with one or more **grade separations**, providing for the movement of traffic between two or more roadways on **different levels**.

**2.5.17 ramp, exit/entrance:** An exit/entrance ramp is an auxiliary roadway used for entering or leaving through-traffic lanes.

ANSI D16.1 - 2017, 8<sup>th</sup> ed.

Interchange: ANSI D16.1 2017, 8th ed.

A ramp or connecting road at an intersection or interchange is presumed to be **part of the highest class** of trafficway with which it connects.

## Intersections

### 2020 FARS/CRSS Coding Guide - Intersections

#### C21b RELATION TO JUNCTION

##### 02 (Intersection)

02 (Intersection) is used when the **FIRST HARMFUL EVENT** occurs in an area which:

- (1) contains a crossing or connection of two or more roadways not classified as a driveway access, and
- (2) is embraced within the prolongation of the lateral curb lines or, if none, the lateral boundary lines of the roadways.

##### 03 (Intersection-Related)

03 (Intersection-Related) means that the **FIRST HARMFUL EVENT**:

- (1) occurs on an approach to or exit from an intersection and
- (2) results from an activity, behavior, or control related to the movement of traffic units through the intersection.

#### NM10 NON-MOTORIST LOCATION AT TIME OF CRASH

##### AT INTERSECTION

“At intersection” means: The **person** is on a roadway (travel lanes) either:

- (1) in the intersection,
- (2) in an area between a crosswalk and the perimeter of the intersection, or
- (3) in a crosswalk (whether marked or unmarked) adjacent to an intersection. If there are no crosswalks, “at intersection” means only the intersection, which is the area embraced within the prolongation of the lateral curb lines or, if none, the lateral boundary lines of the roadways.

##### NOT AT INTERSECTION

The **person** is on a roadway (travel lanes), but not “At Intersection.”

## 2020 FARS/CRSS Coding Guide - Intersections

### PB31/PB31b Pedestrian/Bicycle Crash Location

#### AT INTERSECTION

1 (At Intersection) is used when a **person** is on a roadway (travel lanes):

- (1) in the intersection,
- (2) in an area between a crosswalk and the perimeter of the intersection,

OR

- (3) in a crosswalk (whether marked or unmarked) adjacent to an intersection.

#### INTERSECTION RELATED

2 (Intersection-Related) is used when a **person** is:

- within the trafficway 50 feet out from the perimeter of an "At intersection" area including the entire cross section of the trafficway (e.g., medians, turn lanes, bike lanes, parking lanes, shoulders, sidewalks, etc.)

OR

- the crash is related to the flow of traffic through an intersection (e.g., the result of queuing traffic).

#### NOT AT INTERSECTION

3 (Not At Intersection) is used when a **person** is:

- within the trafficway more than 50 feet out from the perimeter of an "At Intersection" area
- AND
- the crash is not identified as related to the movement of the traffic units through an intersection.

This includes the entire cross section of the trafficway (e.g., medians, turn lanes, bike lanes, parking lanes, shoulders, sidewalks, etc.).

This attribute is the default when the case materials give no indication that the crash is within 50 feet of an intersection.

## Involved Vehicles and Contact Vehicles

### 2020 FARS/CRSS Coding Guide - Involved Vehicles and Contact Vehicles

Throughout the Coding and Validation manual, training, and other materials, the phrases “involved vehicle,” “involved motor vehicle in-transport,” “contact vehicle,” etc. are frequently used. These do not mean the same as “contributed to the crash,” but relate to whether this vehicle had a noncollision event or contact with something else during the crash producing or incurring harm. These contact vehicles will therefore have information collected for them in FARS, CRSS, and NTS. Note that this contact may be through:

2.4.7: “A **contact vehicle** is any road vehicle which comes in contact with one or more road vehicles, non-motorists or property in a collision crash, or has a noncollision crash. A contact vehicle is directly involved in a crash.”

ANSI D16 8<sup>th</sup> Edition

-  • directly touching another vehicle, non-motorist, or property (collision event);
-  • striking or being struck by cargo, persons, or objects set in-motion by another motor vehicle;
-  • setting cargo, persons, or objects into motion which strikes or is struck by another motor vehicle (collision event/set-in-motion); or
-  • by having a noncollision harmful event (e.g., fire, immersion, person falling out of vehicle, etc.).

**Note on identifying contact vehicles:** When the vehicle information section is not completed on the Police Crash Report for a vehicle noted to be involved in a minor harmful event in the diagram or narrative, the vehicle may still be a contact vehicle in the crash. This contact vehicle should be included, even if the amount of damage sustained is below the state threshold and there are no injuries in the vehicle.

Consider the following examples:

- **Example 1:** V1 crosses over the centerline and collides with V2. This crash involves **two** contact vehicles.
- **Example 2:** V1 strikes a Pedestrian crossing the road. This crash involves **one** contact vehicle.
- **Example 3:** V1 swerves across the centerline to avoid a vehicle stopped in its lane, and collides with V2. This crash involves **two** contact vehicles. The vehicle stopped in V1’s lane was indirectly involved but was *not a contact vehicle* because it did not:
  - sustain any injury or damage,
  - strike any vehicle, cargo, or persons, or set objects in-motion striking another motor vehicle,
  - get struck by a vehicle, cargo, or persons, or objects set in-motion by another motor vehicle.
- **Example 4:** Crash report sections are completed for a vehicle which rear-ends a school bus stopped at a light; however, the narrative reports that crash debris scratched an additional vehicle stopped in the adjacent lane. This crash involves **three** contact vehicles.
- **Example 5:** V1, a tractor-trailer, drifts into lane 2. V2, a passenger car traveling in lane 2, swerves left to avoid V1, but in doing so crashes into the center guardrail. V1 continues traveling on down the road. This crash involves **one** contact vehicle. The tractor-trailer was indirectly involved but was *not a contact vehicle* because it did not:
  - sustain any injury or damage,
  - strike any vehicle, cargo, or persons, or set objects in-motion striking another motor vehicle,
  - get struck by a vehicle, cargo, or persons, or objects set in-motion by another motor vehicle.

### 2020 FARS/CRSS Coding Guide - Involved Vehicles and Contact Vehicles

- **Example 6:** V1, a truck with a flatbed trailer hauling cargo, is traveling in lane 2. V2, a passenger car, is traveling in lane 1. A large piece of cargo falls off the flatbed of V1 and into the path of V2. V2 immediately strikes the piece of cargo which fell into its lane. V1 continues traveling on down the road. This crash involves **two** contact vehicles.
  - V1 is a contact vehicle because it set something into motion which struck or was struck by another motor vehicle in-transport.
  - V2 is a contact vehicle because it struck or was struck by something set in motion by another motor vehicle in-transport.
- **Example 7:** V1 is driving down the road when it bursts into flames. Even though the vehicle does not touch another motor vehicle, object, or persons, or anything set in motion by another vehicle, it did have a harmful event (fire). This crash involves **one** contact vehicle.
- **Example 8:** V1 runs off the road, into a river, immediately sinking and drowning the occupants. Even though the vehicle does not touch another motor vehicle, object, or persons, or anything set in motion by another vehicle, it did have a harmful event (immersion). This crash involves **one** contact vehicle.
- **Example 9:** V1, a pickup, is driving down the road when a person standing in the back bed of the truck loses his balance, falls out, and strikes his head on the pavement. The person receives serious injuries. Even though the vehicle does not touch another motor vehicle, object, or persons, or anything set in motion by another vehicle, it did have a harmful event (the occupant falling out of the vehicle). This crash involves **one** contact vehicle.
- **Example 10:** V1 drifts onto the right shoulder and strikes a parked vehicle. This crash involves **two** contact vehicles.
- **Example 11:** V1 drifts onto the right shoulder and strikes a parked vehicle. The parked vehicle is pushed forward into another parked vehicle. V1 and both parked vehicles sustain damage. This crash involves **three** contact vehicles.
- **Example 12:** V1 drifts off the right side of the roadway and strikes the guardrail face. The impact was strong enough to send debris flying over the guardrail and into an adjacent car dealership parking lot. The debris struck five vehicles parked in the lot, causing damage to all five. This crash involves **six** contact vehicles.
- **Example 13:** V2 is approaching an intersection, traveling east. V3 is following V1 approaching the intersection, traveling north. As V2 collides with V1 in the intersection, V3 immediately swerves to avoid the crash. V3, departs the road and into a traffic signal pole. Even though V3 did not make physical contact with V1 or V2, its harmful event occurred as part of the same unstabilized situation. This crash involves **three** contact vehicles.
- **Example 14:** V1 and V2, both motorcycles, are traveling north at high speeds. V1 loses control on uneven pavement and begins to slide sideways launching the driver off the motorcycle and across the pavement. The driver of V2 immediately swerves to the right to avoid striking V1, loses control, runs off the road, and into a ditch where the driver flies off and impacts an embankment. Even though the two motorcycles did not make physical contact with each other, both vehicles had harmful events as part of the same unstabilized situation. The crash involves **two** contact vehicles.
- **Example 15:** V1 traveling on the roadway, slams on the brakes to avoid rear-ending another vehicle. The unbelted passenger in the back seat is thrown forward, striking their head on the front seat back and receives an "A" injury. There was no contact between the two vehicles, but there is an unstabilized situation where an injury occurred involving a motor vehicle in-transport on a trafficway. This crash involves **one** contact vehicle.

## Qualifying Vehicles for Elements V23-V25

### 2020 FARS/CRSS Coding Guide – Qualifying Vehicles for Elements V23-V25

#### Qualifying Vehicles for Data Elements V23-V25 are:

1. A vehicle pulling a trailer with Gross Combination Weight Rating (GCWR) greater than 10,000 lbs.
2. A single vehicle with a GVWR greater than 10,000 lbs.
3. A vehicle with 9 or more seats (including the driver).
4. A vehicle displaying a hazardous materials placard.

#### Notes about GVWR/GCWR:

Gross Vehicle Weight Rating (GVWR) is for a SINGLE vehicle or trailer.  
Gross Combination Weight Rating (GCWR) is for a COMBINATION vehicle.  
GCWR is the sum of the Gross Vehicle Weight Ratings of all units.

GVWR is available by decoding the VIN.

Single

Combination

#### V23 MOTOR CARRIER ID# - 0s, 8s, 7s, 9s

| Is the vehicle one of the above Qualifying Vehicles? | Applicability                                                                                                                                                                                                                                                                                                                                                                                | V23 Code/Attribute     |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| NO                                                   | The vehicle is <b>NOT</b> a Qualifying Vehicle                                                                                                                                                                                                                                                                                                                                               | 00/0s (Not Applicable) |
| YES                                                  | The vehicle <b>IS</b> a Qualifying Vehicle, <b>BUT</b> it is identifiable as: <ul style="list-style-type: none"> <li>• Not properly marked, or</li> <li>• Exempt because of the activity and/or state statute (e.g., personal use vehicles, construction equipment, farm equipment, non-regulated intrastate-only, government owned/operated)</li> </ul>                                     | 88/8s (None)           |

#### V24 VEHICLE CONFIGURATION

##### 01 (Single-Unit Truck [2-axle and GVWR more than 10,000 lbs.])

This code includes personally owned **Qualifying Vehicles** (not towing anything).

##### 05 (Truck Tractor [Bobtail])

##### 02 (Single-Unit Truck [3 or more axles])

##### 04 (Truck Pulling Trailer[s])

This code includes personally owned vehicles towing a trailer that are **Qualifying Vehicles**.

##### 06 (Truck Tractor with a Semi-Trailer)

FARS/CRSS

# 2020 FARS/CRSS Coding Guide – Qualifying Vehicles for Elements V23-V25

## V25 CARGO BODY TYPE

### 01 (Van/Enclosed Box)\*

**11 (Intermodal Container Chassis)** The chassis is specifically designed to have a rail or shipping container mounted directly on it. Intermodal means the container can be used across different forms (or modes) of transport (i.e., rail, ship, truck). If the container is being carried on a flatbed trailer instead of this specially designed chassis, use the code **03 Flatbed**. Don't confuse with a Truck Tractor hauling a semi-trailer which would be coded **01 Van/Enclosed Box**.

### 96 (No Cargo Body Type)\*

### 97 (Other)\*\*

**\*NOTE:** For truck/trailer vehicle configurations where the power unit and trailer have different cargo body types, code the cargo body type of the power unit. For example, a dump truck pulling a flatbed trailer should be coded as **04 (Dump)**.

**EXCEPTION:** truck/trailer vehicle configurations where the power unit's Cargo Body Type would be coded **96 (No Cargo Body Type)** or **97 (Other)**, code the cargo body of the trailer. For example: a dual-rear-wheel pickup truck pulling a flatbed trailer should be coded as **03 (Flatbed)**.

**\*\*97 (Other)** is used when the CARGO BODY TYPE is other than the types listed in the other attributes. This includes pickups greater than 10,000 lbs. without a trailer. If a pickup is pulling a trailer, code the CARGO BODY TYPE of the attached trailer instead of the CARGO BODY TYPE of the pickup. This attribute would also include motor homes.

## CODING EXAMPLES

### Example 1:

Chevrolet Silverado, GVWR: 8,900 lbs.  
Personally owned, not commercial  
Pulling a boat trailer, Trailer GVWR: 3,943 lbs.  
 $G_{CWR} = 8,900 + 3,943 = 12,843$  lbs. which IS Qualifying  
V16 NCSA Body Type: 34 (Light Pickup)  
V23 Motor Carrier ID #: 88/8s (None)  
V24 Vehicle Configuration: 04 (Truck Pulling Trailer[s])  
V25 Cargo Body Type: 97 (Other)  
If you get Edit Checks V507, V640, and V660, recheck to be sure your coding is correct before overriding.

### Example 2:

Ford Super Duty, Full-size Pickup, GVWR: 14,000 lbs.  
Identifiable as commercial, but no carrier information.  
Not pulling a trailer or anything else  
V16 NCSA Body Type: 67 (M/H Pickup [greater than 10,000 lbs. GVWR])  
V23 Motor Carrier ID #: 77/7s (Not Reported)  
V24 Vehicle Configuration: 01 (Single-Unit Truck [2-axle and GVWR more than 10,000 lbs.])  
V25 Cargo Body Type: 97 (Other)

### Example 3:

Toyota Tacoma, GVWR: 5,500 lbs.  
Personally owned, not commercial  
Pulling a trailer, Trailer GVWR not reported  
 $G_{CWR} = 5,500 + ? = \text{Unknown}$  if a Qualifying Vehicle  
V16 NCSA Body Type: 34 (Light Pickup)  
V23 Motor Carrier ID #: 99/9s (Unknown)  
V24 Vehicle Configuration: 99 (Unknown)  
V25 Cargo Body Type: 99 (Unknown)

### Example 4:

Peterbilt Truck Tractor, GVWR 26,001 lbs. or more  
Commercial operation, hauling unknown type of trailer  
Trailer GVWR not reported  
V16 NCSA Body Type: 66 (Truck-Tractor)  
V23 Motor Carrier ID #: enter the number provided or if missing use 77/7s (Not Reported)  
V24 Vehicle Configuration: 06 (Truck Tractor/Semi-Trailer)  
V25 Cargo Body Type: 98 (Unknown Cargo Body Type)

## Total Lanes in Roadway

### 2020 FARS/CRSS Coding Guide - Total Lanes in Roadway

#### REMINDERS:

- The number of lanes counted does not include any of which are rendered unusable by restriction of the right-of-way (e.g., closed due to construction).
- Trafficways are not physically divided unless the divider is a median, barrier, or other constructed device.
- Painted markings on the roadway less than 4 feet wide are not medians.

If Trafficway Description is **1 (Two Way- Not Divided)**, all open lanes are counted.

In this diagram, before the closed portion, count both lanes. Next to the closed portion, count only the one lane that is open. After the closed portion, count both lanes.

If Trafficway Description is **2 (Two Way, Divided, Unprotected Median)** or **3 (Two-way, Divided, Positive Median Barrier)**, only the open lanes on the Roadway that THIS vehicle was originally traveling on are counted.

If Trafficway Description is **5 (Two-Way, Not Divided with a Continuous Left-Turn Lane)**: All open lanes are counted. Continuous Left Turn Lanes are NOT medians.

## 2020 FARS/CRSS Coding Guide - Total Lanes in Roadway

- Be mindful of turn lanes before the intersection and in the intersection.
- Watch out for channelized lanes and turn bays.
- Take care when coding ramps.

## Trafficway Components

### 2020 FARS/CRSS Coding Guide – Trafficway Components

## 2020 FARS/CRSS Coding Guide – Trafficway Components

TRAFFICWAY

ANSI D.16.1 8th Ed., 2017

TRAFFICWAY

ANSI D.16.1 8th Ed., 2017

### Reminders:

- The Roadway is the traveled portion of the Trafficway (Travel Lanes).
- Travel lanes can be either through travel lanes or turn lanes (regular left turn or continuous left turn lanes).
- Continuous Left Turn Lanes are NOT Medians.
- An undivided Trafficway has one Roadway.
- A divided Trafficway has more than one Roadway.
- The Shoulder is not part of the Roadway.
- The Shoulder and the Roadway combine to make up the ROAD.
- The property beyond the Shoulder, but within the Trafficway, is the Roadside.
- The Trafficway extends from the Property Line (or Right-of-Way Line) on one side to the Property Line (or Right-of-Way Line) on the other side and includes all the components within.

## Vehicle Components and Areas of Impact

### 2020 FARS/CRSS Coding Guide – Vehicle Components

Officers may refer to vehicle components associated with impacts in a crash. For example, “V1 struck V2 at the A-pillar.”

**Pillars** – The vertical or near vertical supports of a car’s window area or greenhouse designated respectively as the A, B, C, or (in larger cars) D-pillar, moving from the front to rear, in profile view. They are important for holding glass in place and adding structural integrity to a vehicle, primarily the roof. Not all vehicles have the same number of pillars.

**Greenhouse** – Also referred to as “glasshouse” includes the car’s roof, windshield, rear and side windows, and the pillars separating them, starting from the car’s front (i.e., A- pillar, B-pillar).

**A-pillar** – The front pillar on a car’s greenhouse that holds the windshield in place.

**B-pillar** – The second pillar of a car’s greenhouse, usually separating the front and rear door on a standard 4-door style sedan. It starts at the end of the first door. It is the main support for the mid-section of the vehicle. B-pillar is also responsible for where a door’s latch connects to the body. Can sometimes be referred to as “posts.”

**C-pillar** – The third of a car’s greenhouse, located behind the rear seat. It is the final pillar when it comes to sedans, hatchbacks, and small SUVs.

**D-pillar** – The pillar located behind the third row of seating in vehicles like minivans or large SUVs.

## 2020 FARS/CRSS Coding Guide – Areas of Impact

**AOI-Initial Contact Point, Element Values Diagram**

**AOI-Damaged Areas, Element Values Diagram**

**Clockpoint Diagram**

### Guideline for Resolving Ambiguous Information

If the language in the narrative is ambiguous **AND** the diagram or other case information don't provide resolution, use the area indicated **first in the narrative wording** to select the Area of Impact to code.

See examples table below.

### Examples:

| Narrative Description | Coding |
|-----------------------|--------|
| Front, left           | 12     |
| Left, front           | 62     |
| Front, corner         | 12     |
| Right, rear           | 83     |
| Back, right side      | 06     |
