| <p>16. Abstract</p> <p>NHTSA has collected motor vehicle traffic crash data since the early 1970s to support its mission to reduce motor vehicle traffic crashes, injuries, and deaths on our Nation's trafficways. The two data systems included in this Coding and Validation Manual are the Fatality Analysis Reporting System (FARS) and the Crash Report Sampling System (CRSS). The 2020 data coding year has brought substantial change to the FARS and CRSS data collections. Here are a few highlights of the most noteworthy items.</p> <p>The electronic collection software used by both FARS and CRSS to record the codes used for analysis has been replaced. The legacy <i>Microcomputer Data Entry (MDE)</i> has been replaced by the new <i>Records-Based Information Solution (RBIS)</i>.</p> <p>The <i>Vehicle Level</i> has been reorganized to allow for the addition of six new data elements and the removal of one data element due to NHTSA's implementation of the software used to interpret Vehicle Identification Numbers (VINS).</p> <p>The data element <i>Person Type</i> on the Not a Motor Vehicle Occupant level has been expanded to collect more specific types of non-motorists on motorized or non-motorized personal conveyances.</p> <p>Prior to 2020 the Related Factors on each coding level had coding limitations (e.g., Crash-Related Factors allowed up to three selections). Beginning with the data collection year 2020, the analyst/coder may select all Related Factors that apply to the situation.</p> |                                                      |                                                                                                                                                                                                                            |           |

## **Introduction**

The National Highway Traffic Safety Administration (NHTSA) has collected motor vehicle traffic crash data since the early 1970s to support its mission to reduce motor vehicle traffic crashes, injuries, and deaths on our Nation's trafficways. The two data systems included in this Coding and Validation Manual are the Fatality Analysis Reporting System (FARS) and the Crash Report Sampling System (CRSS).

### **FARS**

FARS contains data derived from a census of fatal motor vehicle traffic crashes in the 50 States, the District of Columbia, and Puerto Rico. To be included in FARS, a crash must involve a motor vehicle traveling on a trafficway customarily open to the public and must result in the death of at least one person (occupant of a vehicle or a non-motorist) within 30 days of the crash. FARS was conceived, designed, and developed by NHTSA's National Center for Statistics and Analysis (NCSA) in 1975 to provide an overall measure of highway safety, to help identify traffic safety problems, to suggest solutions, and to help provide an objective basis to evaluate the effectiveness of motor vehicle safety standards and highway safety programs.

### **CRSS**

CRSS builds on the retiring, long running National Automotive Sampling System General Estimates System (NASS GES). CRSS is a sample of police-reported motor vehicle traffic crashes involving all types of motor vehicles, pedestrians, and cyclists, ranging from property-damage-only crashes to those that result in fatalities. CRSS is used to estimate the overall crash picture, identify highway safety problem areas, measure trends, drive consumer information initiatives, and form the basis for cost- and benefit analyses of highway safety initiatives and regulations. The target population of the CRSS is all police-reported traffic crashes of motor vehicles (motorcycles, passenger cars, SUVs, vans, light trucks, medium- or heavy-duty trucks, buses, etc.). The CRSS target population is the same as the previous NASS GES target population.

## Crash Versus Accident

NHTSA adopted the policy to use the term crash instead of Accident. Accordingly, effective 2009, the term *crash* is used throughout this manual.

The *American National Standard Institute (ANSI) D16.1 - Manual on Classification of Motor Vehicle Traffic Crashes*, in its 8th edition (2017)<sup>1</sup> has also adopted the use of the term “crash” instead of “accident.” This is known as the ANSI Manual.

The use of the term “crash” instead of “accident” in the 8th edition of ANSI D16.1 is not a change in the classification other than the term.

Incidents or scenarios involving collision events, and those involving non-collision events, as defined in ANSI D16.1, are both still included in the term “crash.”

Collision events include those involving a motor vehicle and fixed objects (poles, walls, buildings, barriers, bridge supports, etc.) and those involving a motor vehicle and non-fixed objects (pedestrians, animals, pedalcyclists, other motor vehicles, etc.).

Besides scenarios involving a collision, a crash also shall include non-collision scenarios such as the following:

- A single motor vehicle on a roadway catches fire;
- A motor vehicle runs off a trafficway and is immersed in a body of water;
- An occupant of a motor vehicle is injured by falling from that vehicle while it is in motion or on a roadway;
- An occupant of a motor vehicle is injured by shifting cargo or flying objects within that vehicle during emergency handling/braking;
- A vehicle suffers damage from a pavement irregularity (loose plate, high manhole, pothole, etc.);
- And others.

Consult the ANSI Manual for a more precise and complete presentation of these concepts. As a minimum, the following ANSI D16.1 terms should be well understood to properly select and classify cases for FARS and CRSS. The paragraph reference numbers from the ANSI Manual are provided to aid look-up.

- 2.2.1 Trafficway
- 2.4.1 Harmful Event
- 2.4.2 Deliberate Intent
- 2.4.3 Legal Intervention
- 2.4.4 Unstabilized Situation
- 2.4.5 Cataclysm

- 2.4.6 Crash (formerly Accident)
- 2.4.9 Transport Crash
- 2.4.12 Motor Vehicle Crash
- 2.4.17 Road Vehicle Crash
- 2.4.18 Traffic Crash
- 2.4.19 Non-traffic Crash
- 2.4.22 Motor Vehicle Traffic Crash

## New and Noteworthy in 2020

The 2020 data coding year has brought substantial change to the FARS and CRSS data collections. Below are just a few highlights of the most noteworthy items. Please visit the [2020 FARS/CRSS Manual Changes Summary](#) for the specific changes in each coding level.

The electronic collection software used by both FARS and CRSS to record the codes used for analysis has been replaced. The legacy Microcomputer Data Entry (MDE) has been replaced by the new Records-Based Information Solution (RBIS).

The [Vehicle Level](#) has been reorganized to allow for the addition of six new data elements and the removal of one data element due to NHTSA's implementation of the software used to interpret Vehicle Identification Numbers (VINs), known as vPIC. For more information, visit [vPIC Make / vPIC Model / vPIC Body Class Overview](#). Due to these new vPIC-derived data elements, starting with the 2020 data collection year, the [NCSA Make/Model/Body Type tables](#) will no longer be maintained. They are now located as an appendix.

The data element [Person Type](#) on the Not a Motor Vehicle Occupant level has had an expansion to collect more specific types of non-motorists on motorized or non-motorized personal conveyances.

Prior to 2020 the Related Factors on each coding level had coding limitations (e.g., Crash-Related Factors allowed up to three selections). Beginning with the data collection year 2020, the analyst/coder may select all Related Factors that apply to the situation. In addition, each Related Factor code has been increased to three digits (001, 002, 003, etc.). This three-digit increase allows for the addition of more codes in the future.

## 2020 FARS/CRSS Manual Changes Summary

Below is a list of elements that have substantial changes for **2020**. These changes, as well as others, are highlighted throughout the manual by ***bold/italic*** type.

**IT IS RECOMMENDED THAT YOU REVIEW THE ENTIRE MANUAL FOR ALL CHANGES.**

|----------------------------|------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>V35</u></a> | <a href="#"><u>Extent of Damage</u></a>                          | FARS, CRSS                            | This element indicates the amount of damage sustained by this vehicle in this crash as indicated in the case material based on an operational damage scale.                                                                                                                                                          |
| <a href="#"><u>V36</u></a> | <a href="#"><u>Vehicle Removal</u></a>                           | FARS, CRSS                            | This data element describes the mode in which the vehicle left the scene of the crash.                                                                                                                                                                                                                               |
| <a href="#"><u>V37</u></a> | <a href="#"><u>Sequence of Events</u></a>                        | FARS, CRSS                            | The events in sequence related to this motor vehicle, regardless of injury and/or property damage. Code each event for this vehicle in the order in which they occur, time wise, from the police crash report narrative and diagram.                                                                                 |
| <a href="#"><u>V38</u></a> | <a href="#"><u>Most Harmful Event</u></a>                        | FARS, CRSS                            | This element identifies the event that resulted in the most severe injury or, if no injury, the greatest property damage involving this motor vehicle.                                                                                                                                                               |
| <a href="#"><u>V39</u></a> | <a href="#"><u>Fire Occurrence</u></a>                           | FARS, CRSS                            | This element identifies whether or not a fire in any way related to the crash occurred in this vehicle.                                                                                                                                                                                                              |
| <a href="#"><u>V40</u></a> | <a href="#"><u>Motor Vehicle Automated Driving System(s)</u></a> | FARS, CRSS                            | The hardware and software that are collectively capable of performing part of or all the dynamic driving task on a sustained basis. This term, Automated Driving System (ADS), is used generically to describe any system capable of level 1-5 driving automation. (SAE 2016) See <a href="#"><u>Figure 21</u></a> . |
| <a href="#"><u>V41</u></a> | <a href="#"><u>Related Factors - Vehicle Level</u></a>           | FARS, CRSS                            | This element identifies factors related to this vehicle expressed in the case material.                                                                                                                                                                                                                              |
| <a href="#"><u>V42</u></a> | <a href="#"><u>Vehicle License Plate Number</u></a>              | CRSS Only                             | This element captures the license plate number of this vehicle.                                                                                                                                                                                                                                                      |

## Driver Level Elements

| 2020<br>Element ID  | Element Name                                             | FARS, CRSS,<br>Case Structure | Definition                                                                                                                                                                  |
|---------------------|----------------------------------------------------------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">D1</a>  | <a href="#">State Number</a>                             | FARS Only                     | This element identifies the State in which the crash occurred.                                                                                                              |
| <a href="#">D2</a>  | <a href="#">Consecutive Number</a>                       | FARS Only                     | This element identifies the unique case number assigned by the data entry system.                                                                                           |
| <a href="#">D3</a>  | <a href="#">Vehicle Number - Driver Level</a>            | Case Structure                | This element identifies the vehicle number associated with this driver.                                                                                                     |
| <a href="#">D4</a>  | <a href="#">Driver Presence</a>                          | FARS, CRSS                    | This element identifies whether or not a driver was present in this vehicle at the onset of the unstabilized situation.                                                     |
| <a href="#">D5</a>  | <a href="#">Driver's License State</a>                   | FARS, CRSS                    | This element identifies the State of issue for the license held by this driver.                                                                                             |
| <a href="#">D6</a>  | <a href="#">Driver's ZIP Code</a>                        | FARS, CRSS                    | This element identifies the ZIP Code of this driver's area of residence.                                                                                                    |
| <a href="#">D7</a>  | <a href="#">Non-CDL License Type / Status</a>            | FARS Only                     | This element identifies in two subfields the type of license held by this driver and the status of the license at the time of the crash.                                    |
| <a href="#">D8</a>  | <a href="#">Commercial Motor Vehicle License Status</a>  | FARS Only                     | This element indicates the status for a driver's Commercial Driver's License (CDL) if applicable.                                                                           |
| <a href="#">D9</a>  | <a href="#">Compliance with License Endorsements</a>     | FARS Only                     | This element indicates whether the vehicle driven at the time of the crash requires endorsement(s) on a CDL and whether this driver is complying with the CDL endorsements. |
| <a href="#">D10</a> | <a href="#">License Compliance with Class of Vehicle</a> | FARS Only                     | This element refers to the type of license possessed or not possessed by the driver for the class of vehicle being driven at the time of the crash.                         |
| <a href="#">D11</a> | <a href="#">Compliance with License Restrictions</a>     | FARS Only                     | This element identifies if a driver was compliant with restrictions on their license.                                                                                       |
| <a href="#">D12</a> | <a href="#">Driver Height</a>                            | FARS Only                     | This element identifies a driver's height.                                                                                                                                  |
| <a href="#">D13</a> | <a href="#">Driver Weight</a>                            | FARS Only                     | This element identifies a driver's weight.                                                                                                                                  |
| <a href="#">D14</a> | <a href="#">Previous Recorded Crashes</a>                | FARS Only                     | This element records any previous crashes for this driver. Count only the events occurring within 5 years <i>of</i> the crash date.                                         |

| 2020<br>Element ID      | Element Name                                                                                                                                             | FARS, CRSS,<br>Case Structure | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">D15 (1)</a> | Previous Recorded Suspensions, Revocations, and Withdrawals <a href="#">Subfield 1: Previous Underage Administrative Per Se for BAC</a>                  | FARS Only                     | This subfield records any underage pre-conviction administrative license suspension, revocation, or withdrawal in the previous 5 years including those for zero-tolerance alcohol violations while driving or refusing to submit to chemical testing. This subfield is only for administrative actions associated with alcohol. These are NOT BAC CONVICTIONS. [BAC = blood alcohol concentration]                                                                                                                                                                                                                                                                                                                                                                                                      |
| <a href="#">D15 (2)</a> | Previous Recorded Suspensions, Revocations, and Withdrawals <a href="#">Subfield 2: Previous Administrative Per Se for BAC (Not Underage)</a>            | FARS Only                     | This subfield records the count of previous pre-conviction administratively imposed suspensions, revocations, or withdrawals within the previous 5 years for driving with a BAC above a specified limit or refusing to submit to chemical testing. This subfield is only for administrative actions associated with alcohol. These are NOT BAC CONVICTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <a href="#">D15 (3)</a> | Previous Recorded Suspensions, Revocations, and Withdrawals <a href="#">Subfield 3: Previous Recorded Other Suspensions, Revocations, or Withdrawals</a> | FARS Only                     | This subfield records any previous license suspensions, revocations, or withdrawals for this driver other than Administrative action for BAC violations. This subfield would include administrative actions associated with drugged driving. Count only the events occurring within 5 years <b>of</b> the crash date. If it can be identified on the driving record, do not include in this count recorded actions resulting from non-traffic-related issues or offenses (e.g., failure to pay child support, failure to appear in court for a non-driving offense, a suspension imposed for a drug-related offense not involving the operation of a motor vehicle). Also note that “cancellation” of a CDL license is not counted here. If a driver has been DISQUALIFIED for a CDL, record this here. |
| <a href="#">D16</a>     | <a href="#">Previous DWI Convictions</a>                                                                                                                 | FARS Only                     | This element records any previous DWI convictions for this driver. Count only the events occurring within <b>5 years of</b> the crash date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <a href="#">PC15</a> | <a href="#">Driver Maneuvered to Avoid</a>                                  | FARS, CRSS                    | This data element identifies the thing(s) the driver attempted to avoid while the vehicle was on the road portion of the trafficway, just prior to the First Harmful Event for this vehicle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <a href="#">PC16</a> | <a href="#">Driver Distracted By</a>                                        | FARS, CRSS                    | This element identifies the attribute(s) that best describe this driver's attention to driving prior to the driver's realization of an impending critical event or just prior to impact if realization of an impending critical event does not occur. This element reports on the presence of any distractions that may or may not have contributed to the crash. Distraction from the primary task of driving occurs when drivers divert their attention from the driving task to some other activity. Also, driving while daydreaming or lost in thought is identified as distracted driving by NHTSA. Physical conditions/ impairments (fatigue, alcohol, medical condition, etc.) or psychological states (anger, emotional, depressed, etc.) are not identified as distractions by NHTSA. |
| <a href="#">PC17</a> | <a href="#">Pre-Event Movement (Prior to Recognition of Critical Event)</a> | FARS, CRSS                    | This element identifies the attribute that best describes this vehicle's activity prior to the driver's realization of an impending critical event or just prior to impact if the driver took no action or had no time to attempt any evasive maneuvers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <a href="#">PC18</a> | <a href="#">Critical Event - Precrash (Category)</a>                        | FARS, CRSS                    | This element identifies the category of the event that was critical to this vehicle being involved in the crash.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2020<br>Element ID   | Element Name                                      | FARS, CRSS,<br>Case Structure | Definition                                                                                                                                                          |
|----------------------|---------------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">PC19</a> | <a href="#">Critical Event - Precrash (Event)</a> | FARS, CRSS                    | This element identifies the critical event that made the crash imminent (i.e., something occurred that made the collision possible).                                |
| <a href="#">PC20</a> | <a href="#">Attempted Avoidance Maneuver</a>      | FARS, CRSS                    | This element identifies movements/actions taken by the driver, within a critical crash envelope, in response to a <a href="#">CRITICAL PRECRASH EVENT</a> .         |
| <a href="#">PC21</a> | <a href="#">Pre-Impact Stability</a>              | FARS, CRSS                    | This element assesses the stability of the vehicle <b>after</b> the critical event, but <b>before</b> the impact.                                                   |
| <a href="#">PC22</a> | <a href="#">Pre-Impact Location</a>               | FARS, CRSS                    | This element assesses the location of the vehicle after the critical event, but before the First Harmful Event for this vehicle.                                    |
| <a href="#">PC23</a> | <a href="#">Crash Type</a>                        | FARS, CRSS                    | This element describes the type of crash this in-transport vehicle was involved in based on the <a href="#">FIRST HARMFUL EVENT</a> and the precrash circumstances. |

### Person (Motor Vehicle Occupant) Level Elements

| 2020<br>Element ID | Element Name                                  | FARS, CRSS,<br>Case Structure | Definition                                                                                                          |
|--------------------|-----------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <a href="#">P1</a> | <a href="#">State Number</a>                  | FARS Only                     | This element identifies the State in which the crash occurred.                                                      |
| <a href="#">P2</a> | <a href="#">Consecutive Number</a>            | FARS Only                     | This element identifies the unique case number assigned by the data entry system.                                   |
| <a href="#">P3</a> | <a href="#">Vehicle Number - Person Level</a> | Case Structure                | This element identifies the vehicle number associated with this motor vehicle occupant.                             |
| <a href="#">P4</a> | <a href="#">Person Number</a>                 | Case Structure                | This element identifies a number for the motor vehicle occupant in consecutive order for the vehicle they occupied. |
| <a href="#">P5</a> | <a href="#">Age</a>                           | FARS, CRSS                    | This element identifies the person's age, in years, with respect to the person's last birthday.                     |
| <a href="#">P6</a> | <a href="#">Sex</a>                           | FARS, CRSS                    | This element identifies the sex of the person involved in the crash.                                                |
| <a href="#">P7</a> | <a href="#">Person Type</a>                   | FARS, CRSS                    | This element describes the role of this person involved in the crash.                                               |

| 2020<br>Element ID      | Element Name                                                | FARS, CRSS,<br>Case Structure | Definition                                                                                                                                                                                   |
|-------------------------|-------------------------------------------------------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">P8</a>      | <a href="#">Injury Severity</a>                             | FARS, CRSS                    | This element describes the severity of the injury to this person in the crash.                                                                                                               |
| <a href="#">P9</a>      | <a href="#">Seating Position</a>                            | FARS, CRSS                    | This element identifies the location of this person in or on the vehicle.                                                                                                                    |
| <a href="#">P10</a>     | <a href="#">Restraint System Use</a>                        | FARS, CRSS                    | This element records the restraint equipment in use by the occupant and any indication of mis-use of the available restraint system, at the time of the crash.                               |
| <a href="#">P11</a>     | <a href="#">Helmet Use</a>                                  | FARS, CRSS                    | This element records the helmet use, and any indications of mis-use of the helmet, by motor vehicle occupants of <a href="#">NCSA BODY TYPES</a> 80-91, 96, and 97 at the time of the crash. |
| <a href="#">P12</a>     | <a href="#">Air Bag Deployed</a>                            | FARS, CRSS                    | This element is used to record air bag deployment for this person as reported in the case material.                                                                                          |
| <a href="#">P13</a>     | <a href="#">Ejection</a>                                    | FARS, CRSS                    | This element describes the ejection status and degree of ejection for this person, excluding motorcycle occupants.                                                                           |
| <a href="#">P14</a>     | <a href="#">Ejection Path</a>                               | FARS Only                     | This element identifies the path by which this person was ejected from the vehicle.                                                                                                          |
| <a href="#">P15</a>     | <a href="#">Extrication</a>                                 | FARS Only                     | This element identifies if <b>equipment was</b> used to remove this person from the vehicle.                                                                                                 |
| <a href="#">P16</a>     | <a href="#">Police Reported Alcohol Involvement</a>         | FARS, CRSS                    | This data element reflects only the <b>judgment of law enforcement</b> as to whether alcohol was involved or not for this person.                                                            |
| <a href="#">P17</a>     | <a href="#">Method of Alcohol Determination (By Police)</a> | FARS Only                     | This element describes the method by which the police made the determination as to whether alcohol was involved or not for this person.                                                      |
| <a href="#">P18 (1)</a> | <a href="#">Alcohol Test Status</a>                         | FARS, CRSS                    | This element identifies if an alcohol (ethanol) test was given to this person.                                                                                                               |
| <a href="#">P18 (2)</a> | <a href="#">Alcohol Test Type</a>                           | FARS, CRSS                    | This element identifies the type of the alcohol (ethanol) test that was used for this person.                                                                                                |
| <a href="#">P18 (3)</a> | <a href="#">Alcohol Test Result</a>                         | FARS, CRSS                    | This element identifies the alcohol (ethanol) test result for this person.                                                                                                                   |

| 2020<br>Element ID      | Element Name                                                 | FARS, CRSS,<br>Case Structure | Definition                                                                                                                                                                                                                                            |

| <a href="#">NM13</a>       | <a href="#">Non-Motorist Distracted By</a>                               | FARS, CRSS                            | This element identifies the attribute(s) that best describe this non-motorist's attention prior to the non-motorist's involvement in this crash. This element reports on the presence of any distractions that may or may not have contributed to the crash. Distraction, for a non-motorist, occurs when a non-motorist's attention is diverted from the task of navigating in public to some other activity. Also, daydreaming or lost in thought are identified as distractions by NHTSA. Physical conditions/ impairments (fatigue, alcohol, medical condition, etc.) or psychological states (anger, emotional, depressed, etc.) are not identified as distractions by NHTSA. |

| <a href="#"><u>NM23</u></a> | <a href="#"><u>Died at Scene/En route</u></a>                             | FARS Only                             | This element identifies if this person died at the scene of the crash or en route to a hospital or treatment facility.                                                                                                                                |
| <a href="#"><u>NM24</u></a> | <a href="#"><u>Death Date</u></a>                                         | FARS Only                             | This element records the month, day, and year of this person's death.                                                                                                                                                                                 |
| <a href="#"><u>NM25</u></a> | <a href="#"><u>Death Time</u></a>                                         | FARS Only                             | This element identifies the hour and minute of this person's death using the 24-hour clock format.                                                                                                                                                    |
| <a href="#"><u>NM26</u></a> | <a href="#"><u>Related Factors - Person (Not a MV Occupant) Level</u></a> | FARS, CRSS                            | This element identifies factors related to people not in a motor vehicle expressed in the case material.                                                                                                                                              |
| <a href="#"><u>SP1</u></a>  | <a href="#"><u>Death Certificate Number</u></a>                           | FARS Only                             | This element identifies the four-digit GSA code for the city where the death occurred, the two-digit State number and the six-digit sequence number from the death certificate as assigned by the State Vital Statistics or Vital Records Department. |
| <a href="#"><u>SP2</u></a>  | <a href="#"><u>Fatal Injury at Work</u></a>                               | FARS Only                             | This element indicates if the death certificate identified this person as being "at work" at the time of the crash.                                                                                                                                   |
| <a href="#"><u>SP3</u></a>  | <a href="#"><u>Race/Hispanic Origin</u></a>                               | FARS Only                             | This element indicates the race and Hispanic origin of this person from the death certificate.                                                                                                                                                        |

## 100. FARS Submission Instructions

### 101. How to Submit

Each case must have at least one Person Level form with [INJURY SEVERITY](#) attribute Fatal Injury.

#### **2020 Data**

Enter data directly using procedures described in the FARS **Records-Based Information Solution** Manual (**RBIS** Manual).

### 102. When to Submit

Make submissions at any time during the week via the **RBIS**.

### 103. Data Sources

1. Use the [ANSI D16.1 Manual on Classification of Motor Vehicle Traffic Crashes](#) for definitions in coding the FARS forms.
2. Obtain information from death certificates for people who die as a result of injuries sustained in a motor vehicle crash.
3. Use the State Driver Licensing Files, Vehicle Registration Files, Highway Department Files, Crash Reports, and Vital Statistics Reports.
4. See the FARS **RBIS** manual for instructions on obtaining data and responding to requests for data on vehicles and drivers not registered or licensed in your State.
5. The message system should be used to obtain data on involved Out-of-State drivers and vehicles.
6. Hierarchy for Case material:
  - a. An Early Notification Report can get corrected/replaced/clarified by
  - b. A police crash report can get corrected/replaced/clarified by
  - c. A Supplemental police crash report can get corrected/replaced/clarified by
  - d. A Reconstruction Report
7. Hierarchy for police reported information on the police crash report:
  - a. If information provided in the narrative directly contradicts a coded box, the narrative detail takes precedence over the checkbox.
8. When coding elements: Statements by witnesses in narratives, including those from vehicle passengers or pedestrians, may be used to provide information when police sources are unavailable. The officer's assessment on the police crash report will take precedence over items reported by witnesses in all cases. The officer's assessment includes any statements from a witness included by the officer as part of the police crash report narrative. In absence of clarification by the officer in the police crash report, information that is contradictory from witness statements should not be used.

9. The use of satellite imagery products (GOOGLE Earth, Bing Maps, etc.) shall be limited to verifying or clarifying information already contained in the source materials used to code the FARS case. Satellite imagery products shall not be used to create new data (e.g., Grade not available on crash report; Google street level should not be used to determine grade) or add to information not otherwise available in the original case material (e.g., case material indicate traffic signal, but do not report if pedestrian signal available; do not use satellite imagery tools to determine presence of a pedestrian signal). Imagery included in a State's official video log of Roadway Inventory or in their Linear Reference System is acceptable for coding the FARS case.

## 200. Coding Instructions

### 201. General Instructions

#### 201.1 Codes

201.1.1 All codes are numeric except [Trafficway Identifier](#), [Additional State Information](#), [Rail Grade Crossing Identifier](#), [Vehicle Identification Number](#), [Trailer Vehicle Identification Number](#), and [Motor Carrier Identification Number](#).

201.1.2 The code for attribute **Unknown** is always *a variation of 9 (e.g., 9, 99, 9999)*. **Unknown** should only be used when all sources for obtaining information on an element have been searched and the information is missing or stated unknown. In an element that includes the attribute **Not Reported**, **Unknown** is only used for stated unknowns.

201.1.3 The code for attribute **Not Applicable** or its equivalent is always zero(s), except for data elements C29-C31 where **Not Applicable (Not Notified)** is 8888, **P10 where None Used/Not Applicable is (1) 20 and (2) 7**, **P11 where (1) Not Applicable is 20 and (2) None Used/Not Applicable is 7**, P13 where **Not Applicable** is 8, P24/NM24 where **Not Applicable (non-fatal)** is 88888888, P25/NM25 where **Not Applicable (non-fatal)** is 8888, and SP2 where **Not Applicable (not a fatality)** is 8.

201.1.4 The code for attribute **None** is always zero except for [Alcohol Test Result](#), [Motor Carrier Identification Number](#), [Restraint System Use](#), [Helmet Use](#), and [Non-Motorist Safety Equipment](#).

#### 201.2 Coding Blanks

201.2.1 Blanks are used only in fields to be later updated with four exceptions:

201.2.1.1 If [Driver Presence](#) is coded “0” or “9” all other driver information except [Related Factors-Driver Level](#) must be blank.

201.2.1.2 If [VIN](#) is less than seventeen characters, *see the guidance in [VIN](#)*.

201.2.1.3 If [Trafficway Identifier](#) is less than 30 characters, do not zero-fill or 9-fill. Leave remaining characters blank. The second **Trafficway Identifier** field is also left blank for non-junction crashes.

201.2.1.4 If [Motor Carrier Identification Number](#) is less than 9 characters, do not zero-fill or 9-fill. Leave remaining characters blank.

201.2.2 All codes are right-justified except [VIN](#), [Trailer VIN](#), [Trafficway Identifier](#) and [Motor Carrier Identification Number](#).

#### 201.3 Vehicle, Driver, Precrash, and both Person Levels

201.3.1 Vehicles are numbered consecutively beginning with “001.”

201.3.2 For each vehicle, people are numbered consecutively beginning with “001.” Order is not important. The driver does not have to be “001.”

201.3.3 People not in motor vehicles are numbered consecutively beginning with “01.” Order is not important.

#### 201.4 Miscellaneous

201.4.1 The number of changes per case is not limited.

201.4.2 Request of other States for information should always follow the format of the **RBIS** Out-Of-State Data Request whether the **RBIS** itself or the mail is used.

201.4.3 Refer all coding questions through the CDAN Helpdesk. *See the [Coding Guide: How to Create a Coding Question Ticket in the CDAN Helpdesk](#) for helpful information.*

201.4.4 Copies of all cases or other actions submitted must be retained for 3 years after the data collection year.

201.4.5 If a State will not allow transmittal of complete [VIN](#), send a memorandum to the **CDAN Helpdesk** informing **HQ** of this fact.

201.5 **Special Case, FARS ONLY - Coding Fatal Traffic Crashes for which there is only a death certificate.**

201.5.1 Be sure the death occurred within thirty (30) days (**720 hours**) of the crash. If you don't know, do not submit the case. If it occurred after 30 days (**720 hours**), do not submit.

201.6 **Code the required elements as follows:**

The following elements must be coded. If any of these elements are left blank or if an edit check is violated that involves the coding of one of these elements, you will not have a usable FARS **or CRSS** case.

#### **Crash Level**

[Crash Date](#) - Appropriate Day, Month, and Year

[Crash Time](#) - Appropriate hour and minute if known, 9999 if not known

[Number of Forms Submitted for Persons Not in Motor Vehicles](#) - 00-99

[Number of Vehicle Forms Submitted](#) - 001-999

[Number of Motor Vehicle Occupant Forms Submitted](#) - 000-999

[Crash Events](#) - Table completed in **RBIS**

[First Harmful Event](#) - Appropriate attribute derived from table, 99 if **reported as unknown**

#### **Vehicle Level**

[Vehicle Number](#) - 001-999

[Number of Occupants](#) - 01-98 if known, 99 if unknown

[Unit Type](#) - 1-4

### Driver Level

Vehicle Number - 001-999

Driver Presence - Appropriate attribute if known, 9 if unknown

### Precrash Form

Vehicle Number - 001-999

Crash Type - 01-99

### Person Level (Motor Vehicle Occupant)

Vehicle Number - 001-999

Person Number - 001-999

Person Type - 01-03, 09 for occupants

### Person Level (Not a Motor Vehicle Occupant)

Person Number - 001-999

Vehicle Number of Motor Vehicle Striking Non-Motorist - 001-999

Person Type - 04-07, 10-13, 19 for non-occupants

201.6.1 Code all other elements with the proper attribute if information is known. If no information is known, code the items **Unknown** or **Not Reported as appropriate**. *The following eight exceptions should all use code 0 (zero) as appropriate for the situation:*

- SCHOOL BUS RELATED;
- RAIL GRADE CROSSING IDENTIFIER;
- HIT-AND-RUN;
- JACKKNIFE;
- ROLLOVER;
- EMERGENCY MOTOR VEHICLE USE;
- FIRE OCCURRENCE; and
- CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE.

## **202. Deletion Instructions**

See FARS *Records-Based Information Solution (RBIS)* Manual for instructions on how to delete a case.

## **203. How to Structure a Case**

When creating an **RBIS** case structure, it is important to understand and correctly enter the proper number of Persons Not in Motor Vehicles, Vehicles, and Motor Vehicle Occupants. This initial structuring of the case is important for dependent data elements once your case is created. The following instructions are intended to assist in the proper structuring of your case.

### **Step 1: Number of Persons Not in Motor Vehicles**

Enter the number of people involved in this crash who are not in motor vehicles. This includes:

- Occupants of Non-Motor Vehicle Transport Devices (i.e., people riding in an animal-drawn conveyance, on an animal, or injured occupants of a railway train or a road vehicle on rails)
- Pedestrians
- Bicyclists
- Other Cyclists
- People on Personal Conveyances (motorized and non-motorized)
- People In/On Buildings
- Unknown Types of Non-Motorists

For detailed explanations and examples of each, please see [PERSON TYPE](#).

#### **Important things to consider:**

- Do not include non-contact people. For example, if the case material identifies three pedestrians and only one of them was contacted by a vehicle or something set into motion by a vehicle, you do not include the two who were not contacted.
- Do not include witnesses or other people not directly involved in the crash.
- Do not include uninjured occupants of railway trains or road vehicles on rails.

### **Step 2: Number of Vehicles (in-transport, parked/stopped off roadway)**

Enter the number of vehicles involved in this crash. This includes:

- Motor Vehicles In-Transport (Inside or Outside the Trafficway)
- Motor Vehicles Not In-Transport Within the Trafficway
- Motor Vehicles Not In-Transport Outside the Trafficway
- Working Motor Vehicles (Highway Construction, Maintenance, Utility Only)

For detailed explanations and examples of each, please see [UNIT TYPE](#).

#### **Important things to consider:**

- You must have at least one motor vehicle “In-Transport” involved in the crash to be considered a FARS or CRSS case.
- ***For a Not In-Transport Motor Vehicle (Parked or Working) to be included in the case, it must be involved in a harmful event with a Motor Vehicle In-Transport.***
- Do not include Phantom or Non-Contact Vehicles (i.e., a vehicle that did not directly contact another vehicle and has no harmful event in the crash).
- It is possible to have a case where one vehicle sets something into motion, and then the thing set into motion hits another vehicle. In this case, even though the two vehicles

never made direct contact with each other, both vehicles would be considered contact vehicles and should be entered because they both had harmful events. For more information about set in motion cases, please see [RELATED FACTORS - CRASH LEVEL](#), and [AREAS OF IMPACT](#).

- A vehicle that sets something into motion, striking a person or property and causes injury or damage, is a contact vehicle and should be included in this count.

### **Step 3: Number of Person Forms for a Vehicle**

Enter the number of occupants in the vehicle. An occupant is any person who is part of a motor vehicle (i.e., in it, on it, or attached to it).

For special handling of uninjured occupants for which there is NO Person Level data in the case material, see [Created Records](#) below.

There are three special rules for counting occupants when structuring a case:

- **Buses:** For vehicle [NCSA BODY TYPES 50-52, 55, 58, and 59](#) you will enter ONLY the Driver (regardless of injury) and injured passengers when you are structuring the case. Do not include uninjured passengers. The total [number of occupants](#) (including uninjured occupants) will be added later on the Vehicle Form once your case has been created.
- **Unknown:** If the actual number of motor vehicle occupants is unknown, include the driver, if there is one, plus all other known occupants in the count (even if there is no information in the case material).
- **Uninjured Passengers with no information in the case material:** See [Created Records](#) below.

### **Important things to consider:**

People ejected or who fall from a motor vehicle in-transport are still considered occupants of that vehicle for the duration of the unstabilized situation.

### **Step 4: Injury Severity**

Enter the injury severity for each of the Person Forms you entered in Steps 1 and 3. For detailed explanations and examples, please see [INJURY SEVERITY](#).

### **Created Records**

A Created Record is generated when the total [number of occupants](#) (entered on the Vehicle form) is greater than *the [Number of Person Forms](#) entered when structuring the case* and the *NCSA BODY TYPE is not a bus (BODY TYPES 50, 51, 52, 55, 58, or 59 [large buses])*.

*This is intended to streamline data entry and only applies when information is not available for some or all uninjured passengers, as is the case in some States that do not require information to be collected for uninjured passengers. In these situations, the system automatically generates a created person record with a set of standard values.*

If there are uninjured passengers of an in-transport motor vehicle (other than *NCSA BODY TYPES 50, 51, 52, 55, 58 or 59 [large buses]*), the *RBIS* will automatically populate all of the data elements on the “Created” Person Level (MV Occupant) Form generated by *RBIS*. Because

this is a shortcut to auto-fill data, ensure the values that would apply to each occupant exactly match the values shown [in the table below](#). You will be prompted in **RBIS** to confirm your acceptance of created records (see [Figure 1](#)).

*Figure 1: Created Records Message*

#### **Case Structuring Inducing Created Records:**

1. When structuring a case, enter the Number of **Person Forms submitted**. **Exclude** uninjured passengers for which you have no data anywhere in the case material.
2. On the Vehicle form, code the [NUMBER OF OCCUPANTS](#) data element with the total number of occupants (both injured and uninjured) in the vehicle, as indicated in the case material.
3. Once the [vPIC BODY CLASS](#) and [NCSA BODY TYPE](#) **have** been **selected**, and it is not a bus, the system will generate “Created” Person Level (MV Occupant) forms for the additional occupants (i.e., forms for the uninjured passengers excluded when structuring in “1” above.). A confirmation message will appear (see [Figure 1](#) above). Once confirmed, the system then fills in the form with the data shown [in the Table](#).

**In the following situations people must be counted in *Number of Person Forms for a Vehicle when structuring a case*:**

1. If the vehicle is a **large** Bus (**BODY TYPES 50-52, 55, 58, 59**) only the driver and injured bus passengers are entered into the system for these vehicles, and additional Person forms will not be automatically created.
2. Any driver or injured passenger of a motor vehicle in transport.
3. Any occupant of a motor vehicle not in transport.

***The Created Records are editable and each of the values in the table below can be edited as appropriate. The standard edit checks are activated.***

## Created Records Standard Set of Values

| Element Name                                   | Code       | Attribute                                     |
|------------------------------------------------|------------|-----------------------------------------------|
| Age                                            | 998        | Not Reported                                  |
| Sex                                            | 8          | Not Reported                                  |
| Person Type                                    | 02         | Passenger of a Motor Vehicle in Transport     |
| Injury Severity                                | 0          | No Apparent Injury (O)                        |

| Alcohol Test Type                              | 00         | Test Not Given                                |
| Alcohol Test Result                            | 996        | Test Not Given                                |
| Police Reported Drug Involvement               | 8          | Not Reported                                  |
| *Method of Drug Determination (By Police)      | 8          | Not Reported                                  |
| *Drug Test Status                              | 0          | Test Not Given                                |
| *Drug Specimen                                 | 00         | Test Not Given                                |
| *Drug Test Result                              | 000        | Test Not Given                                |
| Transported to First Medical Facility By       | 0          | Not Transported <b>for Treatment</b>          |
| *Died at Scene/En Route                        | 0          | Not Applicable                                |
| *Death Date                                    | 88 88 8888 | Not Applicable (Non-fatal)                    |
| *Death Time                                    | 8888       | Not Applicable (Non-fatal)                    |
| Person Related Factor                          | 000        | None                                          |
| *Death Certificate Number                      | 0s         | Not Applicable (not a fatality)               |
| *Fatal Injury at Work                          | 8          | Not Applicable (not a fatality)               |
| *Race                                          | 000        | Not a Fatality (not applicable)               |
| *Hispanic Origin                               | 00         | Not a Fatality (not applicable)               |

### \*FARS Only Elements

1. *For Passenger Vehicles, Automobile Derivatives, Utility Vehicles, Light/Medium/Heavy Trucks, Motorhomes, (NCSA BODY TYPE equals 1-79, 92-95, 98, or 99) RESTRAINT SYSTEM USE Subfield 1-Type of Restraint System in Use will auto-populate with 98 (Not Reported) and Subfield 2 – ANY INDICATION OF MIS-USE as 7 (None Used/Not Applicable) and HELMET USE Subfield 1- as 20 (Not Applicable) and HELMET USE Subfield 2 - ANY INDICATION OF MIS-USE as 7 (None Used/Not Applicable).*
2. *For Motorcycles, Mopeds, All-terrain Vehicles, All-terrain Cycles, Other Motored Cycles, Unknown Motored Cycle Types, and ATVs, (NCSA BODY TYPE equals 80-84, or 88-91), RESTRAINT SYSTEM USE Subfield 1-Type of Restraint System in Use will autofill with 20 (None Used/Not Applicable) and Subfield 2 - Any Indication of Mis-Use will autofill with 7 (None Used/Not Applicable) and HELMET USE Subfield 1 will autofill with 98 (Not Reported) and HELMET USE Subfield 2 - ANY INDICATION OF MIS-USE as 7 (None Used/Not Applicable).*

*For Unenclosed and Enclosed Three Wheel Motorcycles/Autocycles, ROVs, and Other Vehicle Types, (NCSA BODY TYPE equals 85-87, 96, or 97) RESTRAINT SYSTEM USE Subfield 1-Type of Restraint System in Use will auto-populate with 98 (Not Reported) and Subfield 2 - Any Indication of Mis-Use as 7 (None Used/Not Applicable) and HELMET USE Subfield 1- as 98 (Not Reported) and HELMET USE Subfield 2 - ANY INDICATION OF MIS-USE as 7 (None Used/Not Applicable).*

## 300. Data Element Coding Instructions

### 301. Section Organization

301.1 For each element, an instruction page follows in the order of the elements on the ***coding levels***. In an element that is duplicated on more ***than*** one ***coding level***, the instructions are provided in the first occurrence of the element with ***a*** reference ***and hyperlink in*** the ***subsequent*** occurrence.

301.1.1 The letters in the upper right-hand corner refer to ***the Coding Levels***:

- ‘C’ - Crash Level
- ‘V’ - Vehicle Level
- ‘D’ - Driver Level
- ‘PC’ - Precrash Level (Vehicle/Driver)
- ‘P’ - Person Level (MV Occupant)
- ‘NM’ - Person Level (Not a MV Occupant)

301.1.2 The *Format* section gives the type ***of*** element (***e.g., numeric, alphanumeric***).

301.1.3 The *Element Value* section lists the attributes for the element and their associated codes.

301.1.4 The *Remarks* section contains coding instructions, special instructions, etc., for the element.

## 400. Understanding and Managing Consistency Checks

*In an edit check, data elements are presented in all capital letters so the reader may quickly recognize which elements are included in the edit check. The individual attributes are not written out, but rather are represented by their codes. To fully understand the edit check, the reader should look up the data element(s), identify the code(s), and read the attribute(s).*

### 401. Consistency Check Formats

*There are three types of edit check formats (if/then, unlikely, and case status / structure error).*

#### 401.1 IF/THEN Edit Checks

*If/then edit checks can further take one of two forms:*

- *Must/must not, or*
- *Should/should not*

*The majority of edit checks are presented in this form. The form is a statement that says: If (first condition) then (second condition). The “then” clause in this form includes the word(s) “should”/“should not” or “must”/“must not.” So, the edit check is saying: If the first condition exists, then the second condition:*

- *Should or should not exist, or*
- *Must or must not exist.*

*See more below on interpreting and resolving “should” vs. “must” edit checks.*

*Please be aware that the issue could be with the coding of the data element(s) associated with the IF condition, the THEN condition, or both.*

*Example:*

*2B0P: If JACKKNIFE equals 1-3, then VEHICLE TRAILING must not equal 0, 9.*

*Read as: If the data element JACKKNIFE equals 1 (No), 2 (Yes-First Event), or 3 (Yes-Subsequent Event), then the data element VEHICLE TRAILING must not equal 0 (No Trailing Units) or 9 (Unknown).*

*Explanation: If the data element JACKKNIFE is coded with codes that apply to an articulated vehicle (codes 1-3), it follows that the element VEHICLE TRAILING must be coded with at least one trailing unit. On the other hand, VEHICLE TRAILING could be coded correctly, and JACKKNIFE might need to be corrected.*

## 401.2 UNLIKELY Edit Checks

*Another format an edit check may take is an “unlikely” statement; meaning the condition is unlikely but possible.*

*Example:*

**U020: UNLIKELY: FIRST HARMFUL EVENT equals 02, 04, 06, 51, or 72.**

*Read as: It is unlikely that the FIRST HARMFUL EVENT is 02 (Fire/Explosion), 04 (Gas Inhalation), 06 (Injured in Vehicle (Non-Collision)), 51 (Jackknife (harmful to this vehicle)), or 72 (Cargo/Equipment Loss, Shift, or Damage (harmful)).*

*Explanation: These events are all non-collision harmful events that typically occur after some other event. For example, when 02 (Fire/Explosion) is coded, it is usually following a collision event such as striking a motor vehicle in-transport. Because it is possible for these codes to be the FHE, the UNLIKELY edit check is merely to make the analyst pause and double check the coding to be sure it is correct.*

## 401.3 Case Status/Structure Integrity Error

*The third format an edit check may take is a “case status/structure integrity error” presented as a factual statement.*

- *Example 1 (Case Status):*

**FA0F: If FIRST HARMFUL EVENT equals blank, then case status is flawed.**

*Read as: The FHE cannot be blank.*

- *Example 2 (Case Structure Integrity):*

**CSI2: There must be exactly one DRIVER LEVEL FORM corresponding to each VEHICLE LEVEL FORM.**

*Read as: There must be one driver level form for each vehicle.*

## 402. Level 1 and Level 2 Edit Checks

*All edit checks are either Level 1 or Level 2.*

### 402.1 Level 1 Edit Checks

*Level 1 edit checks include:*

- *“If/then” edit checks with “must/must not” in the “then” clause*
- *Case status/structure integrity errors*

*Level 1 edit checks cannot be overridden. The combination of conditions is not possible. Your coding or the entry system must be fixed to clear the error.*

*Level 1 Example:*

**4Z0P: If SEQUENCE OF EVENTS equals 02, then FIRE OCCURRENCE for this vehicle must equal 1.**

*Read as: If the SEQUENCE OF EVENTS equals 02 (Fire/Explosion), then you must also code FIRE OCCURRENCE as 1 (Yes) for this vehicle.*

*Explanation: This Level 1 edit check cannot be overridden. If you've coded a fire/explosion for this vehicle in the Crash Events Table, then the data element FIRE OCCURRENCE must also reflect the presence of the fire/explosion for this vehicle.*

## **402.2 Level 2 Edit Checks**

*Level 2 edit checks include:*

- *“If/then” edit checks with “should/should not” in the “then” clause*
- *Unlikely edit checks*

*Level 2 edit checks may be overridden if you determine the coding is correct.*

*Level 2 Example:*

*V052: If BUS USE equals 04, then vPIC BODY CLASS should equal 016 (Bus), or FINAL STAGE BODY CLASS should equal 016 (Bus).*

*Read as: If BUS USE is coded 04 (Intercity), then NCSA BODY TYPE for this vehicle should be 51 (Cross Country/Intercity Bus).*

*Explanation: This Level 2 edit check can be overridden if necessary. If you have something other than this coding combination, be sure to check your coding first before overriding the edit check.*

## **402.3 Resolving Edit Checks**

*Do not be intimidated by edit checks. They are meant as aids and safety nets for coding accurately, but you should not interpret them as saying “what you coded must be wrong.” You need to evaluate what the edit check is saying, what your documents are saying, and what you have coded.*

*If you determine that what you have coded is correct according to coding instructions, and you cannot override the edit check, it may be the edit check that is faulty. You should report this by submitting a coding help ticket through the [CDAN HelpDesk](#). See the [Coding Guide: How to Create a Coding Question Ticket in the CDAN Helpdesk](#) for helpful information.*

## **403. Overriding Edit Checks**

### **403.1 Level 2 Edit Checks**

*Sometimes Level 2 edit checks need to be overridden. The edit check is there to make the analyst pause and take a second look at the coding to be certain it is correct before taking the next step and overriding the edit check. When an edit check override is necessary, a short but detailed explanation is required describing why the code combination is correct.*

**General notes for overriding Level 2 Edit Checks:**

- *Provide enough detail to demonstrate proper coding.*
- *Please do not use the override reason: “Per PCR” or similar. More detail is required.*
- *For age, include age and/or date of birth shown on PCR.*
- *For Blood Alcohol Concentration (BAC), include the BAC shown on the PCR for CRSS, and the BAC and source document for FARS.*
- *Generally, include the information used to code the data elements included in the edit check.*
- *When applicable, indicate that the State coding rules were used.*
- *Override explanations are reviewed to verify proper coding, as part of the data quality control efforts.*

**Example:**

**U170: UNLIKELY: RESTRAINT SYSTEM USE Subfield-1 Type of Restraint System in Use equals 01.**

**Read as:** *It is unlikely that the RESTRAINT SYSTEM USE Subfield 1, Type of Restraint System in Use is equal to 01 (Shoulder Belt Only Used).*

**Explanation:** *It is unusual for a person to only be using a shoulder belt and not also a lap belt. You should check your coding against your case material to be certain. If you are certain this is the correct coding, you may override this edit check.*

**Example Override Reason:** *“Person using shoulder belt but sitting on lap belt.”*

**403.2 Level 1 Edit Checks**

*Level 1 edit checks cannot be overridden. A Level 1 edit check is saying the combination of conditions is not possible. Your coding or the system must be fixed to clear the error.*

*Review your case material and coding instructions to see if you can identify any errors you made and make corrections accordingly. If you believe that what you have coded is correct according to coding instructions and the case material you have, you should report this by submitting a coding help ticket through the [CDAN HelpDesk](#). See the [Coding Guide: How to Create a Coding Question Ticket in the CDAN Helpdesk](#) for helpful information.*

## State Number - FARS Only

**FORMAT:** 2 numeric

**SAS NAME:** Accident.STATE

**ELEMENT VALUES:**

| Codes | Attributes           |
|-------|----------------------|
| 01    | Alabama              |
| 02    | Alaska               |
| 04    | Arizona              |
| 05    | Arkansas             |
| 06    | California           |
| 08    | Colorado             |
| 09    | Connecticut          |
| 10    | Delaware             |
| 11    | District of Columbia |
| 12    | Florida              |
| 13    | Georgia              |
| 15    | Hawaii               |
| 16    | Idaho                |
| 17    | Illinois             |
| 18    | Indiana              |
| 19    | Iowa                 |
| 20    | Kansas               |
| 21    | Kentucky             |
| 22    | Louisiana            |
| 23    | Maine                |
| 24    | Maryland             |
| 25    | Massachusetts        |
| 26    | Michigan             |
| 27    | Minnesota            |
| 28    | Mississippi          |
| 29    | Missouri             |
| 30    | Montana              |

| Codes | Attributes     |
|-------|----------------|
| 31    | Nebraska       |
| 32    | Nevada         |
| 33    | New Hampshire  |
| 34    | New Jersey     |
| 35    | New Mexico     |
| 36    | New York       |
| 37    | North Carolina |
| 38    | North Dakota   |
| 39    | Ohio           |
| 40    | Oklahoma       |
| 41    | Oregon         |
| 42    | Pennsylvania   |

### C3 - Number of Forms Submitted for Persons Not in Motor Vehicles

**FORMAT:** 2 numeric

**SAS NAME:** Accident.PEDS

**ELEMENT VALUES:**

| Codes | Attributes    |
|-------|---------------|
| 00-99 | Actual Number |

**Definition:** This element records the number of Person Level (Not a Motor Vehicle Occupant) forms that are applicable to this case.

**Remarks:** This count will match exactly the people counted in the case structure field “Number of Persons Not in Motor Vehicles.” Occupants of any motor vehicle in-transport, parked/stopped off roadway motor vehicles, working motor vehicles, or motor vehicles in motion outside the trafficway will **not** be counted in this field.

The count for this field includes:

1. Occupants of a Non-Motor Vehicle Transport Device (people riding in an animal-drawn conveyance, on an animal, injured occupants of railway trains) - [PERSON TYPE code 04](#).
2. Pedestrians, Bicyclists, and Other Cyclists - [PERSON TYPE codes 05, 06, and 07](#).
3. People on Personal Conveyances (i.e., skaters, wheelchair occupants) - [PERSON TYPE codes 11-13](#).
4. Any injured people **outside** the trafficway that are not in a motor vehicle (in buildings) - [PERSON TYPE code 10 \(Persons In/On Buildings\)](#).

**Consistency Checks** ([See Section 400](#)):

| Error ID | IF                                                                                                                                                | THEN                                                                                                      |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 5Y0F     | FIRST HARMFUL EVENT equals 08, 09, 15,                                                                                                            | NUMBER OF FORMS SUBMITTED FOR PERSONS NOT IN MOTOR VEHICLES must not equal 00.                            |
| CSI4     | NUMBER OF FORMS SUBMITTED FOR PERSONS NOT IN MOTOR VEHICLES must equal the actual number of persons not in motor vehicles in this case.           | --                                                                                                        |

| PBA8            | NUMBER OF FORMS SUBMITTED FOR PERSONS NOT IN MOTOR VEHICLES equals 1, and the FIRST HARMFUL EVENT equals 08, 09, or 15, and NON-MOTORIST LOCATION AT TIME OF CRASH equals 01 or 02; | RELATION TO JUNCTION (SPECIFIC LOCATION) must equal 3.            |

## C4 - Number of Vehicle Forms Submitted

**FORMAT:** 3 numeric

**SAS NAME:** Accident.VE\_TOTAL

**ELEMENT VALUES:**

| Codes   | Attributes    |
|---------|---------------|
| 001-999 | Actual Number |

**Definition:** This element records all contact motor vehicles that the officer has reported on the police crash report as a unit involved in the crash.

**Remarks:** Included are in-transport vehicles, not in-transport vehicles (parked/stopped off roadway/ working motor vehicles), or vehicles located outside the trafficway boundaries.

**When identifying contact vehicles for this count:**

1. Remember all vehicles that are part of the unstabilized situation are part of the crash. Therefore, when recording the number of vehicles involved, the vehicles need not make contact with one another. They need only have a harmful event as part of the unstabilized situation. For example, two vehicles are traveling through an intersection when a pedestrian steps into the roadway. The first vehicle strikes the pedestrian and the second vehicle swerves to avoid the first, loses control, and overturns. Both vehicles in this situation are “contact” vehicles; therefore, this is a two-vehicle crash.
2. Even though there are no injuries in the vehicle, or the amount of damage sustained is below the State threshold, if the vehicle is involved in a harmful event it is still a contact vehicle within the entire crash and should be included in this count even if the vehicle information section is not completed on the police crash report.

See the [Coding Guide: Involved Vehicles and Contact Vehicles](#) for helpful information.

**IMPORTANT:**

Remember, you must have **at least one Motor Vehicle In-Transport** involved in the crash for this to be a reportable case.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                   | <b>THEN</b>                                                                               |

## C5 - Number of Motor Vehicle Occupant Forms Submitted

**FORMAT:** 3 numeric

**SAS NAME:** Accident.PERSONS

**ELEMENT VALUES:**

| Codes   | Attributes    |
|---------|---------------|
| 000-999 | Actual Number |

**Definition:** This element records the number of Person Level (Motor Vehicle Occupant) forms that are applicable to this case.

**Remarks:** This element is derived when structuring the case. See [203. How to Structure a Case](#) section for remarks.

**Consistency Check** ([See Section 400](#)):

| Error ID | Error Message                                                                                                                               |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| CSI3     | NUMBER OF MOTOR VEHICLE OCCUPANT FORMS SUBMITTED must equal the actual number of Person Level (Motor Vehicle Occupant) forms for this case. |

## C6 - County / C7 City - FARS Only

**FORMAT:** one set 3 numeric, one set 4 numeric

**SAS NAME:** Accident.COUNTY, Person.COUNTY, Accident.CITY

### ELEMENT VALUES:

#### County:

| Codes   | Attributes     |
|---------|----------------|
| 000     | Not Applicable |
| 001-996 | GSA Codes      |
| 997     | Other          |
| 998     | Not Reported   |
| 999     | Unknown        |

#### City:

| Codes     | Attributes     |
|-----------|----------------|
| 0000      | Not Applicable |
| 0001-9996 | GSA Codes      |
| 9997      | Other          |
| 9898      | Not Reported   |
| 9999      | Unknown        |

**Definition:** This element refers to the location of the unstabilized event with regard to the County/City.

**Remarks:** COUNTY and CITY are considered one field. Both must be submitted at the same time.

If COUNTY only is known, CITY may be **9999 (Unknown)**.

Code CITY as **0000 (Not Applicable)** if the crash does not occur within city limits.

Code CITY as **9997 (Other)** if CITY is other than those given by the GSA Codes.

Code CITY as **9999 (Unknown)** if crash location is unknown.

Code COUNTY as **997 (Other)** if COUNTY is other than those given by the GSA Codes.

Code COUNTY as **999 (Unknown)** if location is unknown.

In general, **000 and 0000 (Not Applicable)** should be used when there is no GSA code for the crash location.

**997 and 9997 (Other)** should be used when the Analyst knows there is a GSA code for the location, but the attribute does not appear on the master GSA code list provided by NHTSA Headquarters. Both situations should be reported to NHTSA Headquarters.

#### **998 and 9898 (Not Reported)**

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**" *Check to see if "Unknown" is more appropriate for the situation.*

Code **Not Reported** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                                       | <b>THEN</b>                                        |
|-----------------|-------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 200P            | CITY is greater than 0000 and less than 9997, and COUNTY is greater than 000 and less than 997, | COUNTY and CITY must be valid codes for the STATE. |
| 210P            | CITY is greater than 0000 and less than 9997,                                                   | COUNTY must not equal 999.                         |

## C8 - Crash Date

**FORMAT:** 2 sets of 2 numeric and 1 set of 4 numeric

**SAS NAME:** Accident.DAY, Vehicle.DAY, Person.DAY, Parkwork.PDAY,  
Accident.MONTH, Accident.DAY\_WEEK, Accident.YEAR, Vehicle.MONTH,  
Person.MONTH, Parkwork.PMONTH

### ELEMENT VALUES:

| Codes                           | Attributes               |
|---------------------------------|--------------------------|
| 01-12                           | Month                    |
| 01-31                           | Day ( <b>FARS ONLY</b> ) |
| Current<br>( <i>prefilled</i> ) | Year                     |

**Definition:** This element identifies the date on which the crash occurred.

**Remarks:** If the police crash report indicates that the crash (usually a hit-and-run) occurred between some p.m. and a.m. time (e.g., 8:00 p.m. and 6:00 a.m.) on either a preceding or following day, code the crash as occurring on the following day. If a range of days is indicated (e.g., between Sunday and Friday), code the last date of the range (e.g., Friday).

### FARS SPECIAL INSTRUCTION:

In cases where the crash date is reported as Unknown on the police crash report, refer to the death certificate for the death date to establish the crash date.

### CRSS SPECIAL INSTRUCTION:

The date of the crash is rolled up from CRSS sampling program.

If the date of the crash is unknown, use the date the crash was reported. If the [time of the crash](#) is unknown, record the time as 9999.

If the month cannot be determined from the police crash report, enter the month of the Ending Contact Date from the Inventory Record.

If the crash date on the police crash report does not match the crash date shown on the data entry screen and it is determined that the crash date on the police crash report is correct, the crash date is corrected.

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                   | THEN                                                                 |
|----------|------------------------------------------------------|----------------------------------------------------------------------|
| 170F     | CRASH MONTH equals current month,                    | CRASH DAY should be at least 2 days prior to current day or 99.      |
| 1C0P     | the VEHICLE MODEL YEAR is not equal to 9998 or 9999, | the VEHICLE MODEL YEAR must not be greater than CRASH YEAR plus ONE. |

## C9 - Crash Time

**FORMAT:** 4 numeric

**SAS NAME:** Accident.HOUR, Accident.MINUTE, Vehicle.HOUR, Vehicle.MINUTE, Person.HOUR, Person.MINUTE, Parkwork.PHOUR, Parkwork.PMINUTE

**ELEMENT VALUES:**

| Codes     | Attributes                                    |
|-----------|-----------------------------------------------|
| 0000-2359 | Valid military time (Code midnight as “0000”) |
| 9999      | Unknown                                       |

**Definition:** This element identifies the time at which the crash occurred.

**Remarks:** Enter the time at which the crash occurred as shown on the police crash report. This is the preferred time in all cases. If the crash time is not reported, unknown, or known to be in error, then all available information in the case material should be used to determine CRASH TIME. If the hour cannot be determined, then enter **9999 (Unknown)**.

*See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.*

If the police crash report indicates the crash occurred during some time interval of greater than one hour (e.g., 8:00 p.m. to 6:00 a.m., or 8:00 a.m. to 5:00 p.m.), enter **9999 (Unknown)**. However, if the interval is one hour or less, code the midpoint of the interval.

### Examples:

- 8:00 p.m. to 9:00 p.m., enter **2030**
- 8:30 p.m. to 9:30 p.m., enter **2100**
- 8:50 p.m. to 9:30 p.m., enter **2110**

When the time is available but a.m. versus p.m. is not shown on the police crash report, base the time on [LIGHT CONDITION](#) (e.g., time is 10:00, LIGHT CONDITION is **2 (Dark - Not Lighted)**; code as **2200**).

AM - Starts at 00:00 Midnight

PM - Starts at 12:00 Noon

### How to Code Midnight:

In general, code midnight as 0000 in military time. Midnight is considered to be the beginning of a new day rather than the end of a day. One minute after midnight is 12:01 and is coded as 0001. However, there may be confusion over which day the source is referring to when “midnight” is cited or referred to without explanation. Our practice may not be the practice followed in your sources; therefore, you must determine which part of the day for the crash date given is being considered in your sources. The following are examples of midnight time references that do not easily translate to FARS and CRSS times.

- “midnight”
- 12:00-midnight
- 24:00

#### **End of Day:**

If your data sources give you a [CRASH DATE](#) and are consistent in talking about the end of that day, when they give a non-translatable “midnight” time reference of the crash, then you should code Crash Time as 2359.

#### **Beginning of Day:**

If your sources give a [CRASH DATE](#) and are consistent in referring to the beginning or early moments of that day when they give a non-translatable “midnight” crash time, code “midnight” as **0000**.

#### **FARS SPECIAL INSTRUCTION:**

If the day of the crash and the day of EMS Notification do not have the same date, then be sure to use attribute [018 \(Date of Crash and Date of EMS Notification Were Not the Same Day\)](#) in RELATED FACTORS - CRASH LEVEL.

#### **CRSS SPECIAL INSTRUCTION:**

The time of the crash is rolled up from CRSS sampling program. If the time of the crash is unknown, record the time as **9999 (Unknown)**.

If the time of the crash on the police crash report does not match the crash time shown on the data entry screen and it is determined that the crash time on the police crash report is correct, then the crash time should be changed to reflect the time listed on the police crash report.

#### **Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                               | <b>THEN</b>                                  |
|-----------------|---------------------------------------------------------|----------------------------------------------|
| 220P            | LIGHT CONDITION equals 4, and STATE is not equal to 02, | CRASH TIME must equal 0300-0900, 9999.       |
| 2300            | LIGHT CONDITION equals 5, and STATE is not equal to 02, | CRASH TIME should equal 1600-2200, 9999.     |
| A010            | STATE equals 02, and LIGHT CONDITION equals 4,          | CRASH TIME should equal 0300-1000, 9999.     |
| A020            | STATE equals 02, and LIGHT CONDITION equals 5,          | CRASH TIME should equal 1500-2359, 9999.     |
| A050            | CRASH TIME equals 0900-1600,                            | LIGHT CONDITION should not equal 2-6.        |
| A060            | CRASH TIME equals 2300-0400,                            | LIGHT CONDITION should not equal 1, 4, 5, 9. |
| FP5F            | CRASH TIME is blank,                                    | case status is flawed.                       |

**Consistency Checks (FARS Only) ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                       | <b>THEN</b>                                                                                          |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 3U1P            | DEATH DATE equals CRASH DATE, and CRASH HOUR is not equal to 99,                                                                                | DEATH HOUR must not be less than CRASH HOUR.                                                         |
| 3U2P            | DEATH DATE equals CRASH DATE, and DEATH HOUR equals CRASH HOUR and CRASH MINUTE is not equal to 99,                                             | DEATH MINUTE must not be less than CRASH MINUTE.                                                     |
| 4V1F            | INJURY SEVERITY equals 4,                                                                                                                       | DEATH DATE and DEATH TIME for this person must be within 720 hours of the CRASH DATE and CRASH TIME. |
| A070            | NOTIFICATION TIME EMS is not 8888, 9998, or 9999,                                                                                               | NOTIFICATION TIME EMS should not be more than 120 minutes later than CRASH TIME.                     |
| E09P            | ARRIVAL TIME EMS equals 0000-2359, CRASH TIME-hour equals ARRIVAL TIME EMS-hour, and ARRIVAL TIME EMS-minute is greater than CRASH TIME-minute, | NOTIFICATION TIME EMS-hour should not equal 99.                                                      |
| P520            | CRASH DATE and DEATH DATE are the same, and CRASH TIME and DEATH TIME are the same,                                                             | TRANSPORTED TO FIRST MEDICAL FACILITY BY should equal 0 and DIED AT SCENE/EN ROUTE should equal 7.   |
| P56P            | DIED AT SCENE/EN ROUTE equals 7,                                                                                                                | DEATH TIME should be within 30 minutes of the CRASH TIME.                                            |

## C10 - Trafficway Identifier - FARS Only

**FORMAT:** 2 sets, 30 alphanumeric

**SAS NAME:** Accident.TWAY\_ID, Accident.TWAY\_ID2

### ELEMENT VALUES:

| Codes | Attributes                                                                                      |
|-------|-------------------------------------------------------------------------------------------------|
| --    | Actual Posted Number, Assigned Number, or Common Name (if no posted or assigned number) except: |
| 9s    | Unknown                                                                                         |

**Definition:** This element captures the identity (name) of the trafficway on which the crash occurred.

### Remarks:

#### For Non-Junction Crashes:

Code the TRAFFICWAY IDENTIFIER from the police crash report or highway department in the top row. Leave the bottom row blank.

#### For Intersection Crashes (Not Within an Interchange Area):

Code the TRAFFICWAY IDENTIFIER for the trafficway with the highest function class in the top row. Code the second TRAFFICWAY IDENTIFIER at the intersection, if provided by the police, in the bottom row. If the vehicles are traveling on different roadways of equal class, assign the crash to the roadway on which the motor vehicle precipitating the crash is traveling and record this roadway in the top row.

#### For Intersection-Related Crashes (Not Within an Interchange Area):

Code the TRAFFICWAY IDENTIFIER for the trafficway provided by the police in the top row. This does not necessarily have to be the highest functional class. In all cases, this will be the trafficway where the [FIRST HARMFUL EVENT](#) occurred, or the Unstabilized Situation began. Code the second TRAFFICWAY IDENTIFIER at the intersection, if provided by the police, in the bottom row.

#### For Intersection Crashes Within an Interchange Area:

If the [FIRST HARMFUL EVENT](#) occurs within the intersection of a ramp and the surface roadway:

- Code the TRAFFICWAY IDENTIFIER provided on the police report or highway log in the top row (this does not necessarily have to be the highest function class).
- Code [ROUTE SIGNING](#) for the trafficway in the top row.
- It is important to code the [LAND USE AND FUNCTIONAL SYSTEM](#), [OWNERSHIP](#), and [NATIONAL HIGHWAY SYSTEM](#) for the highest class of trafficway at this intersection.

- Use the bottom row to record the second TRAFFICWAY IDENTIFIER provided by the police for this intersection.

#### **For Intersection-Related Crashes Within an Interchange Area:**

Code the TRAFFICWAY IDENTIFIER for the trafficway provided by the police in the top row. In many cases, this will be the trafficway where the [FIRST HARMFUL EVENT](#) occurred or the Unstabilized Situation began. Code the second TRAFFICWAY IDENTIFIER at the intersection, if provided by the police, in the bottom row.

#### **For Ramp Crashes:**

If the crash occurs on the ramp or is related to the ramp, include the word “RAMP” and/or the ramp ID number after the trafficway’s identifier (e.g., I-10 RAMP).

#### **General Guidelines for Coding Trafficway Identifier:**

This data is obtained from the State Highway Department, or if same as that used by the State Highway Department, from the police crash report. Enter all alphabetic characters with **CAPITAL LETTERS**. If less than 30 characters, left-justify and do not zero-fill.

- Use [standard USPS abbreviations](#) for the street name suffix (ex. AVE, BLVD, CT, FWY). Do not include punctuation at the end of the suffix abbreviation.
- Do not enter the street address where the crash occurred. For example, 245 Elm St. would be entered as ELM ST in **RBIS**.
- Do not enter milepoints here following the trafficway even if provided on the report. Milepoints are entered in the element [MILEPOINT](#).
- Do not enter a cross street referenced by the investigating officer for a **non-junction** crash. For example, if the report states, “the crash occurred on Main Street, 0.6 miles south of Girard Avenue,” Girard Avenue does not go in TRAFFICWAY IDENTIFIER 2. TRAFFICWAY IDENTIFIER 2 is reserved for intersection and intersection-related crashes.
- If a trafficway is known to have both a route identifier and a common name record the route identifier first followed by the common name (Example: State Route 3 is also Indian Head Highway and would be coded as SR-3 INDIAN HEAD HWY).

Obtained from the State Highway Department, or if same as that used by the State Highway Department, from the police crash report.

- If [ROUTE SIGNING](#) is **1 (Interstate)**, you must enter “I-” in the first two spaces of TRAFFICWAY IDENTIFIER.
- If [ROUTE SIGNING](#) is **2 (US Highway)**, you must enter “US-” in the first three spaces of TRAFFICWAY IDENTIFIER.
- If [ROUTE SIGNING](#) is **3 (State Highway)**, you must enter “SR-” in the first three spaces of TRAFFICWAY IDENTIFIER.
- If [ROUTE SIGNING](#) is **4 (County Road)**, you must enter “CR-” in the first three spaces of TRAFFICWAY IDENTIFIER followed by the route number OR name if there is no number.

Immediately after the route designation (I-, US-, or SR-), you should enter the corresponding highway number. For example, Interstate 70 should be coded as “I-70” and US 66 should be coded as “US-66.” You must use a dash in the highway designation between the capital letters and the number.

If one trafficway is both a State Highway and an Interstate Highway, [ROUTE SIGNING](#) must always be coded “1-Interstate.” You should always try to obtain the route number and milepoint that correspond to the Route Signing (Interstate).

- a) If the TRAFFICWAY IDENTIFIER and [MILEPOINT](#) are available for only the State Highway then code [ROUTE SIGNING](#) as **1 (Interstate)**, enter “I-” in the first two spaces of TRAFFICWAY IDENTIFIER followed by the full State Highway Identifier as normal (including any letters.) Code the State Highway Milepoint under the element [MILEPOINT](#).

Example: If California 215 is also Interstate 15, then code “I-SR215” or “I-CA215.”

- b) If the TRAFFICWAY IDENTIFIER and [MILEPOINT](#) are available for both the State Highway and the Interstate Highway, enter “I-” in the first two spaces of TRAFFICWAY IDENTIFIER followed by the Interstate number. You may then also enter the State Highway Identifier anywhere after the Interstate route number. Code the Interstate Milepoint under the element [MILEPOINT](#).

Example: “I-15 SR215” or “I-15 CA215”

Similarly, if a State Highway is also a U.S. Highway, [ROUTE SIGNING](#) must always be coded “2-US Highway.” You should always try to obtain the route number and milepoint that correspond to the Route Signing (US Highway).

- a) If the TRAFFICWAY IDENTIFIER and MILEPOINT are available only for the State Highway, then code [ROUTE SIGNING](#) as **2 (US Highway)**, enter “US-” in the first three spaces of TRAFFICWAY IDENTIFIER followed by the full State Highway Identifier as normal (including any letters). Code the State Highway Milepoint under the element [MILEPOINT](#).

Example:

If Florida Route 25 is also US Route 27, then code “US-SR25” or “US-FL25.”

- b) If the TRAFFICWAY IDENTIFIER and MILEPOINT are available for both the U.S. Highway and the State Highway, enter “US-” in the first three spaces of TRAFFICWAY IDENTIFIER followed by the U.S. route number. You may then also enter the State Highway Identifier anywhere after the U.S. route number. Code the U.S. Route Milepoint under the element [MILEPOINT](#).

Example:

“US-27 SR25” or “US-27 FL25”

### **Overlapping Roadways of Equal Function Class**

For situations where you are presented with a roadway with two equal functional class identifiers for the same roadway, such as a stretch of roadway that is both US-10 and US-25, record both trafficways in TRAFFICWAY IDENTIFIER #1 using the “slash” format. The lower number

trafficway should appear before the slash (e.g., “US-10/25”). This would also apply to Interstates, State, and County roadways with two designations of equal class.

### **Other Land Ways (e.g., alleys, parking lot ways)**

Crashes that occur on **alleys**, parking lot ways, or privately-owned land ways open to the public for transportation will likely not be named in the State Highway Department inventory. If the police provide a name for this trafficway, use that name. If, however, you are provided a street address OR the name of the adjacent trafficway (i.e., not the location where the crash occurred) OR the location information is blank, enter “NONE.”

***Alley: A land way providing vehicular access, in general, as a narrow lane between houses or buildings to the rear of those houses or buildings; some of which may further serve as access to a driveway. This also includes the land ways between or behind buildings that connect several lots to the main trafficway. Alleys are trafficways when they serve this function.***

***Parking Lot: See the [ANSI D 16.1 8th Edition](#), Section 2.5.22 for the definition of Parking Lot, and the included areas of parking stalls, lot aisles, and lot ways. Parking stalls and lot aisles are not trafficways. Parking lot ways in parking lots open to the public are considered trafficways. To be a parking lot way, the paved area should have at least one outlet to another trafficway. In parking lots, features common to other trafficways including crosswalks, traffic controls (signs or signals), and lane lines are indications of a parking lot way.***

### **Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                        | <b>THEN</b>                                                                                             |
|-----------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 1F1P            | RELATION TO JUNCTION (b) does not equal 02, 03,                                                  | the second TRAFFICWAY IDENTIFIER should be blank.                                                       |
| 340P            | ROUTE SIGNING equals 1,                                                                          | the first position of TRAFFICWAY IDENTIFIER #1 must be “I” and the second position must be “-”.         |
| 341P            | the first position of TRAFFICWAY IDENTIFIER No. 1 equals “I” and the second position equals “-”, | ROUTE SIGNING must equal 1 or 7.                                                                        |
| 350P            | ROUTE SIGNING is 2,                                                                              | the first two positions of TRAFFICWAY IDENTIFIER No. 1 must be “US” and the third position must be “-”. |
| 351P            | the first two positions of TRAFFICWAY IDENTIFIER #1 equals “US” and third position equals “-”,   | ROUTE SIGNING must equal 2 or 7.                                                                        |
| 360P            | ROUTE SIGNING equals 3,                                                                          | the first two positions of TRAFFICWAY IDENTIFIER No. 1 must be “SR” and the third position must be “-”. |
| 361P            | the first two positions of TRAFFICWAY IDENTIFIER #1 equals “SR” and third position equals “-”,   | ROUTE SIGNING must equal 3 or 7.                                                                        |

| <b>Error ID</b> | <b>IF</b>                                             | <b>THEN</b>                                                                                          |
|-----------------|-------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 362P            | ROUTE SIGNING equals 4,                               | the first two positions of TRAFFICWAY IDENTIFIER #1 must be “CR” and the third position must be “-”. |
| 781P            | TYPE OF INTERSECTION equals 02-07, 10, <b>or 11</b> , | TRAFFICWAY IDENTIFIER (b) should not be blank.                                                       |
| AC0A            | RELATION TO JUNCTION (b) equals 02, 03,               | the second TRAFFICWAY IDENTIFIER should not be all blank.                                            |

## C11 - Route Signing - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Accident.ROUTE

**ELEMENT VALUES:**

| Codes | Attributes                   |
|-------|------------------------------|
| 1     | Interstate                   |
| 2     | US Highway                   |
| 3     | State Highway                |
| 4     | County Road                  |
| 5     | Local Street - Township      |
| 6     | Local Street - Municipality  |
| 7     | Local Street - Frontage Road |
| 8     | <a href="#">Other</a>        |
| 9     | Unknown                      |

**Definition:** This element identifies the route signing of the trafficway on which the crash occurred. Code the value that represents the FHWA approved Land Use and Functional System. FHWA classification obtainable from the State Highway Department must be used. No other classification source is acceptable. Refer problems in obtaining the FHWA classification to the State DOT planning office.

**Remarks:** Before coding this element, be certain of which trafficway is to be coded. This element is coded with respect to the trafficway in the top row of [TRAFFICWAY IDENTIFIER](#). If there is any question, refer to the remarks section of TRAFFICWAY IDENTIFIER for a hierarchy for selecting the appropriate trafficway to be coded.

### CODING FRONTAGE ROADS

If the crash occurs on a frontage road that is part of a larger, higher order trafficway (such as Interstate, U.S. Highway, or State Route), use the following guideline to code the highway elements:

- Code [TRAFFICWAY IDENTIFIER](#) and [LAND USE AND FUNCTIONAL SYSTEM](#) (b) for the **01 (Interstate)**, **02 (Principal Arterial - Other Freeways and Expressways)**, or **04 (Minor Arterial)**.
- Code ROUTE SIGNING **7 (Local Street - Frontage Road)**.

Make sure to include the highway designation in TRAFFICWAY IDENTIFIER when using **7 (Local Street - Frontage Road)**. See [TRAFFICWAY IDENTIFIER](#).

If the **Frontage Road** is a separate trafficway, code all highway elements for that trafficway. **Frontage Road** is not used.

**8 (Other)** is used for route signings other than those previously listed and would include **Other Limited Access**, **Other Major Artery**, and crashes that occur on parking lot ways or other privately owned landways open to the public for transportation.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                                        | <b>THEN</b>                                                                                             |
|-----------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 260P            | ROUTE SIGNING equals 1,                                                                          | NATIONAL HIGHWAY SYSTEM must equal 1.                                                                   |
| 320P            | LAND USE AND FUNCTIONAL SYSTEM (b) equals 01, and ROUTE SIGNING does not equal 7,                | NATIONAL HIGHWAY SYSTEM must equal 1.                                                                   |
| 330P            | NATIONAL HIGHWAY SYSTEM equals 0, 9,                                                             | ROUTE SIGNING must not equal 1.                                                                         |
| 340P            | ROUTE SIGNING equals 1,                                                                          | the first position of TRAFFICWAY IDENTIFIER #1 must be "I" and the second position must be "-".         |
| 341P            | the first position of TRAFFICWAY IDENTIFIER No. 1 equals "I" and the second position equals "-", | ROUTE SIGNING must equal 1 or 7.                                                                        |
| 350P            | ROUTE SIGNING is 2,                                                                              | the first two positions of TRAFFICWAY IDENTIFIER No. 1 must be "US" and the third position must be "-". |
| 351P            | the first two positions of TRAFFICWAY IDENTIFIER #1 equals "US" and third position equals "-",   | ROUTE SIGNING must equal 2 or 7.                                                                        |
| 360P            | ROUTE SIGNING equals 3,                                                                          | the first two positions of TRAFFICWAY IDENTIFIER No. 1 must be "SR" and the third position must be "-". |
| 361P            | the first two positions of TRAFFICWAY IDENTIFIER #1 equals "SR" and third position equals "-",   | ROUTE SIGNING must equal 3 or 7.                                                                        |
| 362P            | ROUTE SIGNING equals 4,                                                                          | the first two positions of TRAFFICWAY IDENTIFIER #1 must be "CR" and the third position must be "-".    |
| A280            | ROUTE SIGNING equals 1,                                                                          | SPECIAL JURISDICTION should not equal 1-5, 8, 9.                                                        |
| A290            | ROUTE SIGNING equals 1, and RELATION TO JUNCTION (a) equals 0,                                   | RELATION TO JUNCTION (b) should not equal 02-04, 06, 08, 16.                                            |
| A291            | RELATION TO JUNCTION (b) equals 07,                                                              | ROUTE SIGNING should not equal 5, 6.                                                                    |

## C12 - Land Use and Functional System - FARS Only

**FORMAT:** 1 numeric occurring 1 time, 2 numeric occurring 1 time

**SAS NAME:** Accident.RUR\_URB, Accident.FUNC\_SYS

**ELEMENT VALUES:**

### C12a: Land Use

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 1     | Rural                                             |
| 2     | Urban                                             |
| 6     | <a href="#">Trafficway Not in State Inventory</a> |
| 8     | <a href="#">Not Reported</a>                      |
| 9     | <a href="#">Unknown</a>                           |

### C12b: Functional System

| Codes | Attributes                                          |
|-------|-----------------------------------------------------|
| 01    | Interstate                                          |
| 02    | Principal Arterial - Other Freeways and Expressways |
| 03    | Principal Arterial - Other                          |
| 04    | Minor Arterial                                      |
| 05    | Major Collector                                     |
| 06    | Minor Collector                                     |
| 07    | Local                                               |
| 96    | <a href="#">Trafficway Not in State Inventory</a>   |
| 98    | <a href="#">Not Reported</a>                        |
| 99    | <a href="#">Unknown</a>                             |

**Definition (Land Use):** The classification of the segment of the trafficway on which the crash occurred based on the Federal Highway Administration (FHWA) approved adjusted Census boundaries of small urban and urbanized areas.

**Definition (Functional System):** This element identifies the functional classification of the segment of the trafficway on which the crash occurred.

**Remarks:** Before coding this element, be certain of which trafficway is to be coded. This element is coded with respect to the trafficway selected in [NATIONAL HIGHWAY SYSTEM](#), [OWNERSHIP](#), [ROUTE SIGNING](#), and in the top row of [TRAFFICWAY IDENTIFIER](#). The exception would be an intersection crash in an interchange. Please see the remarks below and in [TRAFFICWAY IDENTIFIER](#) for a hierarchy for selecting the appropriate trafficway to be coded.

Code the value that represents the FHWA approved Land Use and Functional System. FHWA classification obtainable from the State Highway Department must be used. No other classification source is acceptable. Refer problems in obtaining the FHWA classification to the State DOT planning office.

### ***Land Use:***

**6 (Trafficway Not in State Inventory)** is used when a qualifying motor vehicle traffic crash occurs on a trafficway that is not included in the State highway inventory. Examples include crashes that occur on parking lot ways or other privately owned landways open to the public for transportation.

**8 (Not Reported)** is used when the crash occurred on a reportable trafficway but the information to record LAND USE is missing or unavailable. ***Check to see if 9 (Unknown) is more appropriate for the situation.***

**9 (Unknown)** is used when the crash occurred on a reportable trafficway, but it is unknown if the crash location is within the boundaries of an urban area. If LAND USE is unknown, FUNCTIONAL SYSTEM, [OWNERSHIP](#) and [NATIONAL HIGHWAY SYSTEM](#) can still be coded with known values. For example, it may be known that the crash occurred somewhere along on an interstate. Thus, the trafficway is owned by the State and is part of the NHS. However, it may not be known if the location was within urban boundaries or not.

### ***Functional System:***

**96 (Trafficway Not in State Inventory)** is used when a qualifying motor vehicle traffic crash occurs on a trafficway that is not included in the State highway inventory. Examples include crashes that occur on parking lot ways or other privately owned landways open to the public for transportation.

**98 (Not Reported)** is used when the crash occurred on a reportable trafficway but the information to record FUNCTIONAL SYSTEM is missing or unavailable. ***Check to see if 99 (Unknown) is more appropriate for the situation.***

**99 (Unknown)** is used when the crash occurred on a reportable trafficway, but the functional classification of the segment of the trafficway on which the crash occurred can't be determined or the applicable segment can't be determined. If FUNCTIONAL SYSTEM is unknown, LAND USE, [OWNERSHIP](#) and [NATIONAL HIGHWAY SYSTEM](#) can still be coded with a known value. For example, it may be known that the crash occurred within or outside urban boundaries (LAND USE). However, the trafficway may change classification along its length and the segment of the trafficway on which the crash occurred may not be known.

### **NON-JUNCTION CRASHES**

Assign the crash to the trafficway on which the [FIRST HARMFUL EVENT](#) occurred. If the FIRST HARMFUL EVENT occurred on private property, assign the crash to the trafficway on which the vehicle was traveling when the Unstabilized Situation began.

## INTERSECTION CRASHES (Not Within an Interchange)

In an at-intersection crash, assign the crash to the highest function class of trafficway at the intersection. If the vehicles are traveling on different roadways of equal class, assign the crash to the roadway on which the motor vehicle precipitating the crash is traveling.

## INTERSECTION CRASHES (Within an Interchange)

Interchange crashes that occur in an intersection of a ramp that connects a higher and a lower class trafficway should be assigned to the highest-class trafficway. For example: vehicle #1 strikes vehicle #2 in the intersection of the I-270 ramp and US-10. Code FUNCTIONAL SYSTEM as **01 (Interstate)**.

Ramps are part of the highest class of trafficway to which they connect. Therefore, if a crash occurs on a ramp, including in the merge/diverge lanes, and it is not an Intersection crash, it is assigned to the highest class of trafficway to which the ramp connects. Example: vehicle #1 overturns on the ramp of I-270 and US-10. Code FUNCTIONAL SYSTEM **01 (Interstate)**. This includes intersection-related and entrance/exit ramp related crashes for [RELATION TO JUNCTION](#).

## OTHER CRASHES (Within an Interchange)

For other crashes that occur within an interchange, other than intersection crashes, code FUNCTIONAL SYSTEM for the trafficway on which the vehicles were traveling. Example, vehicle #1 strikes vehicle #2 on US-10 bridge within the I-270 interchange (not in the intersection of any ramp, or on any ramp). Code FUNCTIONAL SYSTEM for US-10 and not I-270.

## QUESTIONABLE CASES

In any questionable case, the higher function class takes precedence.

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                                                | THEN                                                                                                                               |

| 96    | <a href="#">Trafficway Not in State Inventory</a> |
| 98    | <a href="#">Not Reported</a>                      |
| 99    | <a href="#">Unknown</a>                           |

**Definition:** This element identifies the entity that has legal ownership of the segment of the trafficway on which the crash occurred.

**Remarks:** Before coding this element, be certain of which trafficway is to be coded. This element is coded with respect to the trafficway selected in [NATIONAL HIGHWAY SYSTEM](#), [LAND USE AND FUNCTIONAL SYSTEM](#), [ROUTE SIGNING](#), and in the top row of [TRAFFICWAY IDENTIFIER](#). The exception would be an intersection crash in an interchange. Please see the remarks section of TRAFFICWAY IDENTIFIER for a hierarchy for selecting the appropriate trafficway to be coded.

Code the level of government that best represents the highway owner irrespective of whether agreements exist for maintenance or other purposes.

- “State” means owned by one of the 50 States, the District of Columbia, or the Commonwealth of Puerto Rico including quasi-official State commissions or organizations;
- “County, local, municipal, town, or township” means owned by one of the officially recognized governments established under State authority;
- “Federal” means owned by one of the branches of the U.S. Government or independent establishments, government corporations, quasi-official agencies, organizations, or instrumentalities;
- “Other” means any other group not already described above or nongovernmental organizations with the authority to build, operate, or maintain toll or free highway facilities.
- Only private roads that are open to public travel (e.g., toll bridges) are to be reported in HPMS.

**96 (Trafficway Not in State Inventory)** is used when a qualifying motor vehicle traffic crash occurs on a trafficway that is not included in the State highway inventory. Examples include crashes that occur on parking lot ways or other privately owned landways open to the public for transportation.

**98 (Not Reported)** is used when the crash occurred on a reportable trafficway but the information to record OWNERSHIP is missing or unavailable. *Check to see if 99 (Unknown) is more appropriate for the situation.*

**99 (Unknown)** is used when the crash occurred on a reportable trafficway, but it can’t be determined which entity has legal ownership of the segment of the trafficway on which the crash occurred or the applicable segment can’t be determined. If OWNERSHIP is unknown, [LAND USE and FUNCTIONAL SYSTEM](#) and [NATIONAL HIGHWAY SYSTEM](#) can still be coded with known values. For example, it may be known that the crash occurred in an urban area on a minor collector that is not part of the NHS. However, the location detail may not be sufficient to determine OWNERSHIP (e.g., **03 (Town or Township Highway Agency)** or **04 (City or Municipal Highway Agency)**).

Federal Highway Administration classification obtainable from the State Highway Department must be used.

No other classification source is acceptable. Refer problems in obtaining the FHWA classification to the State DOT planning office.

**Consistency Checks** ([See Section 400](#)):

## C14 - National Highway System - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Accident.NHS

**ELEMENT VALUES:**

| Codes | Attributes                            |
|-------|---------------------------------------|
| 0     | This section IS NOT on the NHS        |
| 1     | This section IS ON the NHS            |
| 9     | Unknown if this section is on the NHS |

**Definition:** This element identifies whether or not this crash occurred on a trafficway that is part of the National Highway System.

**Remarks:** The National Highway System includes the Interstate System and consists of principal arterial system routes and some Strategic Highway Network connectors functionally classified below principal arterial.

Federal Highway Administration classification obtainable from the State Highway Department must be used. No other classification source is acceptable. Refer problems in obtaining the FHWA classification to Regional State Assignee.

**Consistency Checks** ([See Section 400](#)):

## C15 - Special Jurisdiction - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Accident.SP\_JUR

### ELEMENT VALUES:

| Codes | Attributes                 |
|-------|----------------------------|
| 0     | No Special Jurisdiction    |
| 1     | National Park Service      |
| 2     | Military                   |
| 3     | Indian Reservation         |
| 4     | College/University Campus* |
| 5     | Other Federal Properties*  |
| 8     | Other                      |
| 9     | Unknown                    |

**Definition:** This element identifies if the location on the trafficway where the crash occurred qualifies as a Special Jurisdiction even though it may be patrolled by State, county, or local police (e.g., all State highways running through Indian reservations are under the jurisdiction of the Indian reservation).

**Remarks:** Road must be under the regulation of Special Jurisdiction, although it may be patrolled by State, county, or local police forces.

There is a difference between a National Park and National Forest. Only areas described as National Parks should be **1 (National Park Service)**. State parks should be coded as **8 (Other)**, and National Forests should be coded as **0 (No Special Jurisdiction)**.

State highways running through Indian Reservations must be coded as **3 (Indian Reservation)**.

**\* These values are unlikely occurrences and will raise an error flag.**

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                            | THEN                                             |
|----------|-----------------------------------------------|--------------------------------------------------|
| A180     | LAND USE AND FUNCTIONAL SYSTEM (b) equals 01, | SPECIAL JURISDICTION should not equal 1-5, 8, 9. |
| A190     | LAND USE AND FUNCTIONAL SYSTEM (b) equals 02, | SPECIAL JURISDICTION should not equal 4.         |
| A280     | ROUTE SIGNING equals 1,                       | SPECIAL JURISDICTION should not equal 1-5, 8, 9. |
| U010     | UNLIKELY: SPECIAL JURISDICTION equals 4 or 5. | --                                               |

## C16 - Milepoint - FARS Only

**FORMAT:** 5 numeric

**SAS NAME:** Accident.MILEPT

### ELEMENT VALUES:

| Codes  | Attributes                   |
|--------|------------------------------|
| 0000.0 | None                         |
| --     | Actual to Nearest Tenth Mile |
| 9999.8 | <a href="#">Not Reported</a> |
| 9999.9 | Unknown                      |

**Definition:** This element identifies the milepoint nearest to the location where the crash occurred.

**Remarks:** Refer to the remarks section under [LAND USE AND FUNCTIONAL SYSTEM](#) for the hierarchy of selecting the trafficway to be coded.

Code the MILEPOINT for the respective [TRAFFICWAY IDENTIFIER](#). For crashes that occur on entrance or exit ramps use the milepoint associated with the ramp location with respect to the trafficway to which it belongs. When transitioning between two trafficways of equal functional class choose the milepoint of the exiting trafficway.

Obtained from the State Highway Department. Code the actual Milepoint to the nearest .1 mile with decimal. Right justify if less than 5 digits. For example, if Milepoint is 10, you must code "0010.0."

### The Difference Between Mile POINTS and Mile POSTS:

Mile POINTS make up the length of a road. They are part of a State's official Linear Referencing System (LRS). Mile points are measurements of the road and are expressed in decimal format. This LRS is used for the State's official Trafficway Asset Management. This information can come ONLY from a State's DOT out of their official Roadway Inventory, Roadlog, or other Roadway information collection system; because, the physical mile POST may or may not align with the LRS mile POINT.

The Mile POST (sometimes called Mile Markers or Mile Post Markers) is the physical, numerical marker located on the roadside. This is typically the information located on police crash reports, as law enforcement frequently refer to the mile posts or mile markers when describing the location of an incident. **DO NOT CODE THE MILE POST.**

**9999.8 (Not Reported)** is used when the information to record MILEPOINT is not applicable, missing, or unavailable. ***Check to see if 0000.0 (None) or 9999.9 (Unknown) are more appropriate for the situation.***

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                   | <b>THEN</b> |
|-----------------|---------------------------------------------|-------------|
| U740            | UNLIKELY: MILEPOINT is greater than 0500.0. | --          |

## C17 - Global Position

**FORMAT:** 8 numeric, 9 numeric

**SAS NAME:** Accident.LATITUDE, Accident.LONGITUD

**ELEMENT VALUES:**

| Codes | Attributes                                         |
|-------|----------------------------------------------------|
| --    | Latitude (dd.mm.ss.ss) (degrees/minutes/seconds)   |
| --    | Longitude (ddd.mm.ss.ss) (degrees/minutes/seconds) |
| 7s    | <a href="#">Not Reported</a>                       |
| 8s    | Not Available                                      |
| 9s    | <a href="#">Reported as Unknown</a>                |

**Definition:** This element identifies the location of the crash using Global Position coordinates.

**Remarks:** “Global Position” refers to the geographic location of the crash. It is expressed in Degrees, Minutes, and Seconds of **Latitude**; and Degrees, Minutes, and Seconds of **Longitude**:

**Latitude:** dd mm ss.ss (Degrees/Minutes/Seconds)

**Longitude:** ddd mm ss.ss (Degrees/Minutes/Seconds)

In some instances, your source documents may display Longitude as a negative (-) number. You may disregard the minus (-) sign. ***Code the complete valid Latitude and Longitude if available, if not blank, and if not unknown. You must code valid Latitude or Longitude minutes and seconds when coding a valid value for Latitude or Longitude degrees (for example: Latitude - 38 99 99.99 is invalid).***

**Right-Justify Degrees and Minutes:**

Note that **Longitude** Degrees can be up to three digits. Code Degrees less than three digits in the right-most positions and “0s” to the left. Code **Latitude** or **Longitude** Minutes less than two digits in the right-most position with “0s” to the left. Examples: Longitude “77 degrees - 7 minutes - no seconds” is coded 077 07 00.00; Longitude “80 degrees - no minutes - no seconds” is coded 080 00 00.00; Latitude “30 degrees - one minute - 30 seconds” is coded 30 01 30.00.

**Latitude and Longitude Seconds:**

Code the value of **Latitude** or **Longitude** Seconds to two significant places after the decimal. If the **Latitude** or **Longitude** Seconds precision is less than two decimal positions, enter “0s” in the right-most positions of Seconds. Always right-justify any data before the decimal point with added “0s” to the left (e.g., 5.1 seconds is 05.10 with no spaces before the decimal point).

***A Geo-locator tool is available on RBIS to assist generating latitude and longitude when they are not available on the crash report or through State sources.***

**7s (Not Reported)**

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**” ***Check to see if 8s (Not Available) or [9s \(Reported as Unknown\)](#) is more appropriate for the situation.***

Code **7s (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9s (Reported as Unknown)** is selected if the investigating officer reported that the global position of the crash was not known.

#### **FARS SPECIAL INSTRUCTION:**

The State police crash report may include the geographic location in a format compatible with this element, or the State Highway Department may be able to provide it from a State Geographic Information System (GIS) or Global Positioning System (GPS).

#### **CRSS SPECIAL INSTRUCTION:**

*Use location information provided on the crash report to pinpoint the crash location according to the Geolocator tool instructions. If the crash report does not provide enough information to pinpoint the location with the Geolocator tool, code as 7s (Not Reported).*

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                              | <b>THEN</b>                                                                                                                          |
|-----------------|----------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| G01P            | STATE is ____ and GLOBAL POSITION - LATITUDE (degrees) is not equal to 77, 88, 99,     | LATITUDE (degrees) must be equal to, or greater than ( <u>1d</u> ), and LATITUDE (degrees) must not be greater than ( <u>2d</u> ).   |
| G02P            | STATE is ____, and GLOBAL POSITION - LATITUDE (degrees) equals ( <u>1d</u> ),          | LATITUDE (minutes) must be equal to, or greater than ( <u>1s</u> ).                                                                  |

| G12P            | any part of GLOBAL POSITION - LONGITUDE (degrees, minutes, or seconds) is blank,  | all parts of LONGITUDE must be blank.  |

## C18 - Crash Events

**FORMAT:** *Elements* Completed in **RBIS**

**SAS NAME:** (See Below)

**Definition:** The Crash Events table records in chronological sequence, the set of events resulting from an unstabilized situation that constitutes a motor vehicle traffic crash.

**Remarks:** The “crash” is concluded in time when all events that originate from the unstabilized situation are stabilized. The Crash Events table is designed to provide a coded description of all qualifying events that occurred in the crash.

With this coded chronological sequence of qualified crash events, traffic safety analysts can review the entire series of events involving in-transport motor vehicles. Various areas of concern to the highway safety community can be easily assessed using this data. For instance, the injury severity in crashes can be assessed relative to the number and type of impacts involved. Likewise, certain collision configurations that may create a greater hazardous condition for the occupants can be identified. Other possible areas of analysis would be the mix of vehicles sizes or the types of objects the different classes of vehicles impact.

To complete the Crash Events table, each event for each vehicle is recorded in the order in which they occur, timewise, based on the description of the crash from the crash report narrative, diagram, or other relevant case material. Crash Events includes both harmful and non-harmful events that occur in the crash. Recording of Crash Events ends at the last harmful event of the entire crash. Therefore, a non-harmful event (e.g., Crossing the Centerline) that occurs following the last harmful event of the crash will not be included.

The Crash Events table is completed based on the actions of the in-transport motor vehicle(s) in the case. Consequently, other involved traffic units (parked motor vehicle, working motor vehicle, pedestrian, etc.) are only identified in the events for the in-transport motor vehicle that contacted it. If the crash report includes an event that involves only not in-transport motor vehicles and/or non-motorists, that specific event is not entered as an event in the coded crash sequence. Examples Include:

- Not in-transport vehicle impacts pedestrian, other not in-transport vehicle, or fixed object.
- Pedestrian or pedalcyclist impacts an object, a not in-transport vehicle, other non-motorist.

See the [Coding Guide: Crash Events Table, Vehicle Placement](#) for helpful information.

**\*Note:** Data recorded in the Crash Events table is used to derive the following data elements:

- [FIRST HARMFUL EVENT \(FHE\)](#) - the first injury or damage producing event in each crash.
- [AREAS OF IMPACT - Initial \(AOI - Initial\)](#) - the first Areas of Impact value for each vehicle.
- [SEQUENCE OF EVENTS \(SOE\)](#) - all events (harmful and non-harmful) associated with each in-transport motor vehicle in the table.

For items identified in a “damaged property” section on the report, include all items listed associated with the applicable vehicle in the best order that can be determined. If the actual order cannot be determined, use the listed order of items. In a multi-vehicle crash, if it cannot be determined which vehicle is associated with the damaged property listed, assign these items to the vehicle most likely to be associated with this property. If this cannot be established, omit these events.

### C18 Crash Events Table Columns

| Vehicle Number<br>(This Vehicle) | Areas of Impact<br>(This Vehicle) | Sequence of<br>Events (SOE) | Vehicle Number<br>(Other Vehicle) | Areas of Impact<br>(Other Vehicle) |
|----------------------------------|-----------------------------------|-----------------------------|-----------------------------------|------------------------------------|
|----------------------------------|-----------------------------------|-----------------------------|-----------------------------------|------------------------------------|

#### **Event Number**

**FORMAT:** *Element* Completed in **RBIS**

**SAS NAME:** Cevent.EVENTNUM, Vevent.EVENTNUM

#### **ELEMENT VALUES:**

| Codes   | Attributes    |
|---------|---------------|
| 001-999 | Actual Number |

**Remarks:** This is a computer assigned number beginning with “001.” The event number(s) show the chronological sequence of the qualifying harmful and non-harmful events in the crash. Qualifying events are those that involve an in-transport motor vehicle or an object set in motion by an in-transport motor vehicle.

In the **RBIS** this will be the row position and not displayed as a column in the entry table.

#### **Vehicle Number (This Vehicle)**

**FORMAT:** *Element* Completed in **RBIS**

**SAS NAME:** Cevent.VNUMBER1, Vevent.VNUMBER1

#### **ELEMENT VALUES:**

| Codes   | Attributes    |
|---------|---------------|
| 001-999 | Actual Number |

**Remarks:** Enter the number of the in-transport motor vehicle associated with the event in the SEQUENCE OF EVENTS column of the Crash Events Table. Vehicles are assigned the police crash report’s vehicle number unless a vehicle number from the police crash report is not used in the case (e.g., non-contact vehicle). **See the [Coding Guide: Crash Events Table, Vehicle Placement](#) for helpful information.**

### Areas of Impact (This Vehicle)

**FORMAT:** *Element* Completed in **RBIS**

**SAS NAME:** Cevent.AOI1, Vevent.AOI1

**ELEMENT VALUES:** \*

| Codes | Attributes                                                                    |
|-------|-------------------------------------------------------------------------------|
| 00    | <a href="#">Non-Collision</a>                                                 |
| 01-12 | <a href="#">Clock Points</a>                                                  |
| 13    | <a href="#">Top</a>                                                           |
| 14    | <a href="#">Undercarriage</a>                                                 |
| 61    | <a href="#">Left</a>                                                          |
| 62    | <a href="#">Left-Front Side</a>                                               |
| 63    | <a href="#">Left-Back Side</a>                                                |
| 81    | <a href="#">Right</a>                                                         |
| 82    | <a href="#">Right-Front Side</a>                                              |
| 83    | <a href="#">Right-Back Side</a>                                               |
| 18    | <a href="#">Cargo/Vehicle Parts Set in Motion</a>                             |
| 19    | <a href="#">Other Objects or Person Set in Motion</a>                         |
| 20    | <a href="#">Object Set in Motion, Unknown if Cargo/Vehicle Parts or Other</a> |
| 98    | <a href="#">Not Reported</a>                                                  |
| 99    | <a href="#">Reported as Unknown</a>                                           |

**Remarks:** Identifies the contact point (if applicable) for the vehicle coded in Vehicle Number (This Vehicle) associated with this event. If the event is a Collision event, code the value that identifies the impact area or indicates this vehicle set an object in motion. If the event is a Non-Collision *Harmful* event, use the attribute **00 (Non-Collision)**. If the event is a [Non-Harmful event](#), then skip entry of an AREAS OF IMPACT (This Vehicle) value for that event.

This field uses the same values and Remarks as the Vehicle Level data element [AREAS OF IMPACT - Initial Contact Point](#). The Vehicle Level data element AREAS OF IMPACT - Initial Contact Point is derived from the Crash Events Table and will always be the first recorded AREA OF IMPACT value for each vehicle in the table. See the [Coding Guide: Vehicle Components and Areas of Impact](#) for helpful information.

### Sequence of Events

**FORMAT:** *Element* Completed in *RBIS*

**SAS NAME:** Cevent.SOE, Vevent.SOE

**ELEMENT VALUES:**

#### **Non-Harmful Events:**

| Codes | Attributes                                                          |
|-------|---------------------------------------------------------------------|
| 61    | <a href="#">Equipment Failure (blown tire, brake failure, etc.)</a> |
| 62    | <a href="#">Separation of Units</a>                                 |
| 63    | <a href="#">Ran Off Roadway-Right</a>                               |
| 64    | <a href="#">Ran Off Roadway-Left</a>                                |
| 79    | <a href="#">Ran off Roadway - Direction Unknown</a>                 |
| 71    | <a href="#">End Departure</a>                                       |
| 65    | <a href="#">Cross Median</a>                                        |
| 68    | <a href="#">Cross Centerline</a>                                    |
| 66    | <a href="#">Downhill Runaway</a>                                    |

#### Not Reported/Unknown

| Codes | Attributes                                          |
|-------|-----------------------------------------------------|
| 98    | <a href="#">Harmful Event, Details Not Reported</a> |
| 99    | <a href="#">Reported as Unknown</a>                 |

**Remarks:** This data element is derived from the Crash Events Table. Recording of Crash Events ends at the last harmful event of the entire crash. Therefore, a [non-harmful event](#) (e.g., Crossing the Centerline) that occurs following the last harmful event of the crash will not be included. Correction to the SEQUENCE OF EVENTS order must be made by revision to the Crash Events Table. This field uses the same values and Remarks as the Vehicle Level data element [SEQUENCE OF EVENTS](#).

**Vehicle Number (Other Vehicle)****FORMAT:** *Element* Completed in **RBIS****SAS NAME:** Cevent.VNUMBER2, Vevent.VNUMBER2**ELEMENT VALUES:**

| Codes   | Attributes    |
|---------|---------------|
| 001-999 | Actual Number |

**Remarks:** This identifies the vehicle number of the vehicle contacted by the motor vehicle in-transport recorded in “Vehicle Number (This Vehicle).” This field is applicable only when the event is a collision between two motor vehicles (i.e., SEQUENCE OF EVENTS codes [12](#), [54](#), [55](#), [14](#), or [45](#)). If the event is **not** a collision between two motor vehicles, then Vehicle Number (Other Vehicle) is not applicable and left blank. **See the [Coding Guide: Crash Events Table, Vehicle Placement](#) for helpful information.**

**[Areas of Impact \(Other Vehicle\)](#)****FORMAT:** *Element* Completed in **RBIS****SAS NAME:** Cevent.AOI2, Vevent.AOI2**ELEMENT VALUES:**

| Codes | Attributes                                                                    |
|-------|-------------------------------------------------------------------------------|
| 00    | <a href="#">Non-Collision</a>                                                 |
| 01-12 | <a href="#">Clock Points</a>                                                  |
| 13    | <a href="#">Top</a>                                                           |
| 14    | <a href="#">Undercarriage</a>                                                 |
| 61    | <a href="#">Left</a>                                                          |
| 62    | <a href="#">Left-Front Side</a>                                               |
| 63    | <a href="#">Left-Back Side</a>                                                |
| 81    | <a href="#">Right</a>                                                         |
| 82    | <a href="#">Right-Front Side</a>                                              |
| 83    | <a href="#">Right-Back Side</a>                                               |
| 18    | <a href="#">Cargo/Vehicle Parts Set in Motion</a>                             |
| 19    | <a href="#">Other Objects or Person Set in Motion</a>                         |
| 20    | <a href="#">Object Set in Motion, Unknown if Cargo/Vehicle Parts or Other</a> |
| 98    | <a href="#">Not Reported</a>                                                  |
| 99    | <a href="#">Reported as Unknown</a>                                           |

**Remarks:** Identifies the contact point for the vehicle coded in Vehicle Number (*Other Vehicle*) associated with this event. *If the event is not a collision between two motor vehicles, then AOI (Other Vehicle) is not applicable and left blank.*

This field uses the same values as the Vehicle Level data element [AREAS OF IMPACT - Initial Contact Point](#). The Vehicle Level data element AREAS OF IMPACT - Initial Contact Point is derived from the Crash Events Table and will always be the first recorded AREAS OF IMPACT value for each vehicle in the table. *See the [Coding Guide: Vehicle Components and Areas of Impact](#) for helpful information.*

|-------|-----------------------------------------------------|
| 98    | <a href="#">Harmful Event, Details Not Reported</a> |
| 99    | <a href="#">Reported as Unknown</a>                 |

**Definition:** *The first* injury- or damage-producing event of the crash.

**Remarks:** On following page.

## **Non-Collision Harmful Events**

### **Non-Collision events involving motorcycles and vehicles with a “load”:**

Non-Collision events may occur before or after a collision event. They should not be coded as a separate event if they occur as part of a collision event.

#### **Examples:**

- A motorcycle strikes a deer, overturns, and the rider becomes separated from the vehicle. Code the collision event, not the non-collision “Rollover/Overturn” and “Fell/Jumped from Vehicle” that occur as part of the collision event.
- One tractor/trailer rear-ends another tractor/trailer. The impact pushes the lead vehicle’s load into the back of the tractor cab with part falling onto the roadway. Code the collision event, not the non-collision “cargo-loss or shift” that occurred as part of the collision event.

**01 (Rollover/Overturn)** is used when a motor vehicle rotates (rollover) at least one quarter turn onto its side or end. For motorcycles, laying the motorcycle down on its side is sufficient to code **01 (Rollover/Overturn)** as a harmful event if damage or injury is produced, even though the data element [ROLLOVER](#) is not applicable to motorcycles.

If there is a **01 (Rollover/Overturn)** that begins in another location but involves a ditch or embankment in the case (e.g., “rolled through the ditch,” “rolled down the embankment,” “came to rest against the embankment”), then the rule applies where if there is no damage associated with an impact with the fixed object during the rollover, it is not included in the Crash Events. If there is indication that damage resulted from an impact with the fixed object, it is included in the Crash Events. This follows the same logic as striking a tree or another vehicle during an overturn.

**Note:** For *vehicles* with attached *trailing unit(s)* by fixed *or non-fixed* linkage, when either the power unit or the *trailing unit(s)* rolls over, the entire vehicle will be considered a rollover. *This applies to all motor vehicles with any type of trailing unit(s). If a motorcycle is pulling a trailing unit that overturns, the motorcycle should have 01 (Rollover/Overturn) in its Crash Events. However, since the power unit is a motorcycle, the element [ROLLOVER](#) still does NOT apply.*

**02 (Fire/Explosion)** is used for a vehicle fire or explosion that occurs during the crash sequence or as a result of the crash.

As it pertains to the occurrence of **02 (Fire/Explosion)**, the crash circumstances are not considered stabilized until the threat of damage to this vehicle, or injury consequences to this vehicle’s occupants, has ceased. Therefore, the crash sequence is not considered stabilized until all occupants have exited the vehicle and the scene has been declared safe by police or other authority. Fires that occur at a later time to vehicles abandoned at the scene (in open fields, on hillsides, etc.) or to vehicles removed from the scene to another location (tow yard, curbside, etc.) are not considered part of the crash sequence.

**03 (Immersion or Partial Immersion)** is used when an in-transport motor vehicle enters a body of water and results in injury or damage. This code would also be used if the vehicle came to rest

in water and the depth cannot be ascertained from case material. **NOTE:** In immersion fatalities the injury to the person may be noted as “drowning.”

**04 (Gas Inhalation)** includes injury or death as a result of toxic fumes, such as carbon monoxide fumes leaking from a motor vehicle in-transport.

**51 (Jackknife [harmful to this vehicle])** applies to a condition that occurs to an articulated vehicle, (any vehicle with a trailing unit(s) connected by a hitch; truck tractor or single-unit truck with one or more trailers, articulated bus, car pulling a boat on a trailer, etc.) while in motion. The condition reflects a loss of control of the vehicle by the driver in which the trailer(s) yaws from its normal straight-line path behind the power unit, striking the power unit, causing damage to the power unit or trailer. Jackknife should only be coded as a harmful event if there is clear indication of damage to the jackknifed vehicle or injury to its occupants caused by the jackknife.

**06 (Injured in Vehicle [non-collision])** is used when an occupant is injured during an unstabilized situation without a collision, excluding cargo/equipment loss or shift. Examples: Driver slams on brake, causing an unrestrained passenger to be injured. Driver makes a sharp turn causing driver to strike head on side window, knocking driver unconscious.

**44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])** is used when the pavement surface irregularity is on a paved surface. Other examples include indication of contact with a dip, depression, low spot, trough, etc.) If the impact is with a surface irregularity (e.g., ruts, potholes) not on a paved surface use the [58 \(Ground\)](#). For a vehicle that “bottoms out” on the paved surface (causing damage) due to speed but not because of a pavement surface irregularity, use attribute **07 (Other Non-Collision)**.

**07 (Other Non-Collision)**. Non-collision not captured in the listed non-collision attributes.

**Examples:**

- Damage to the vehicle produced by its own dislodged vehicle parts (including hood flying up and contacting the windshield).
- A vehicle “bottoms out” (causing damage) due to speed but not because of a pavement surface irregularity. Damage due to pavement surface irregularities should be coded **44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])**.

**16 (Thrown or Falling Object)** is used when any object (1) is thrown (intentionally or unintentionally) and impacts an in-transport vehicle, or (2) falls onto, into, or in the path of an in-transport motor vehicle. If a tree limb falls from a tree and is contacted by a car, enter **16 (Thrown or Falling Object)**. If a person maliciously throws an object off an overpass into traffic below, enter **16 (Thrown or Falling Object)**. This excludes contacts made by loads or objects set in motion by a motor vehicle (see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport\)](#)).

**72 (Cargo/Equipment Loss, Shift, or Damage [harmful])** refers specifically to the loss or shift of items carried on or in a motor vehicle or its trailing unit, causing damage and/or injury to the vehicle, its occupants, its parts, trailing unit, or the cargo itself. Harm can be measured in loss of monetary value from unrecoverable cargo loss as well as physical damage. This attribute should never be used to refer to a “collision” event (see [54 \(Motor Vehicle In-Transport Strikes or is](#)

## Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)).

### **Examples:**

- A pickup truck brakes rapidly to avoid a collision. This causes a piece of lumber in the pickup bed to smash through the rear window.
- Unsecured cargo shifts inside a box truck and bursts through the wall of the trailer.
- Pallets of beehives on a flatbed truck fall off the truck on a sharp curve causing the hives to open and the bees to fly away.

### **Notes:**

In situations when a cargo shift is part of a collision event, the cargo shift is not coded separately. See [Non-Collision events involving motorcycles and vehicles with a “load.”](#)

- Unsecured cargo shifts inside a box truck causing a loss of control. The driver overcorrects, driving off the road. This would be a [60 \(Cargo/Equipment Loss or Shift \[non-harmful\]\)](#) in the SEQUENCE OF EVENTS.
- Use [07 \(Other Non-Collision\)](#) in a situation where a motor vehicle in transport is towing another unit (motor vehicle, trailer, etc.) and the second unit collides into the back of the power unit (not a Jackknife or part of a collision event).

**05 (Fell/Jumped from Vehicle)** is used when an occupant of this vehicle falls or jumps (not suicide) from the vehicle causing injury. For example, an occupant of a motor vehicle in-transport leans against the car door, it opens and the occupant falls out; or a person riding on a vehicle's exterior (hood, roof, running board, etc.) falls or jumps, and is injured by the fall. If an occupant falls or jumps from a vehicle and is struck by that vehicle, use this attribute.

### ***Collision With a Motor Vehicle In-Transport***

**12 (Motor Vehicle In-Transport)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact within the trafficway boundaries. In-transport means that the motor vehicle is in motion or on the roadway portion of a trafficway.

**54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact by something set in motion by one or both of the vehicles.

In crashes involving harmful events caused by objects set in motion by a motor vehicle in-transport, remember that a vehicle's load is considered part of the vehicle.

### **Examples:**

- If cargo falls from a truck (in-transport) and strikes another motor vehicle in-transport, this is treated as a two-vehicle crash. Therefore, the proper code for both vehicles is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the [AREA OF IMPACT \(This Vehicle\)](#) column is coded [18 \(Cargo/Vehicle Parts Set in Motion\)](#).

- If an in-transport vehicle strikes an at-rest object that was previously cargo or part of another motor vehicle in-transport, the SEQUENCE OF EVENTS for that event is **73 (Object That Had Fallen from Motor Vehicle In-Transport)**. If that object is then propelled into another motor vehicle in-transport, the proper SEQUENCE OF EVENTS attribute for this next event is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the **AREA OF IMPACT (This Vehicle)** column is coded **19 (Other Objects or Person Set in Motion)**.
- If an in-transport vehicle strikes an at-rest object that was not cargo or part of another motor vehicle in-transport, the SEQUENCE OF EVENTS for that event is **18 (Other Object [Not Fixed])**. If that object is then propelled into another motor vehicle in-transport, the proper SEQUENCE OF EVENTS code for this next event is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the **AREA OF IMPACT (This Vehicle)** column is coded **19 (Other Objects or Person Set in Motion)**.

This attribute does not apply when the cargo, people, or objects set in motion by an in-transport motor vehicle strikes something other than another in-transport motor vehicle. In this case, use the applicable “collision with non-fixed object” or “collision with fixed object” code for the thing struck by the cargo, person, or object set in motion.

#### **Examples:**

- If cargo falls from a truck (in-transport) and strikes another vehicle that is not in-transport, the proper SEQUENCE OF EVENTS attribute is **14 (Parked Motor Vehicle)** or **45 (Working Motor Vehicle)** depending on which type of not in-transport vehicle was contacted by the load and the **AREA OF IMPACT (This Vehicle)** column is coded **18 (Cargo/Vehicle Parts Set in Motion)**.
- If cargo falls from a truck (in-transport) and strikes a pedestrian, the proper SEQUENCE OF EVENT attribute would be **08 (Pedestrian)** and the **AREA OF IMPACT (This Vehicle)** column is coded **18 (Cargo/Vehicle Parts Set in Motion)**.
- If a pedestrian is struck by an at-rest object propelled by an in-transport vehicle (parked motor vehicle, stop sign, etc.), the proper SEQUENCE OF EVENTS attribute for this harmful event is **08 (Pedestrian)** and the **AREA OF IMPACT (This Vehicle)** column is coded **19 (Other Objects or Person Set in Motion)**.

**55 (Motor Vehicle in Motion Outside the Trafficway)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact outside the trafficway boundaries in a motor vehicle traffic crash.

#### **Example:**

A vehicle loses control attempting to turn into a gas station and strikes another vehicle pulling away from the pump in the station lot.

### ***Collision With Object Not Fixed***

**08 (Pedestrian)** is used for all those not on a personal conveyance. A person pushing a vehicle should be coded **08 (Pedestrian)**. A person being carried by another person should also be considered a **08 (Pedestrian)**.

**09 (Pedalcyclist)** is used for any person on a non-motorized other road vehicle propelled by pedaling. Examples include a bicycle, tricycle, unicycle, or pedal car.

If a non-motorist is hit as a result of a vehicle to vehicle collision and you cannot reasonably determine which vehicle struck the non-motorist, use the lowest vehicle number of the MVIT(s) involved in the vehicle to vehicle event that resulted in the pedestrian or pedalcyclist collision. In the element [\*\*RELATED FACTORS - PERSON \(NOT A MOTOR VEHICLE OCCUPANT\) LEVEL\*\*](#), use code [\*\*031 Default Code Used for Vehicle Numbering\*\*](#).

**10 (Railway Vehicle)** is any land vehicle that is (1) designed primarily for, or in use for, moving people or property from one place to another on rails and (2) not in use on a land way other than a railway.

- Inclusions: Railway Trains, Streetcar/trolley on private way.
- Exclusions: Streetcar/trolley operating on trafficway.

**74 (Road Vehicle on Rails)** is any land vehicle on rails operating in a trafficway.

- Inclusions: Streetcar/trolley operating on trafficway.
- Exclusions: Railway Trains, Streetcar/trolley on private way, Streetcar/trolley or electric bus operating on tires.

**11 (Live Animal)** is used for collisions with live animals (domesticated or wild) that are not themselves being used as transportation or to draw a wagon, cart, or other transport device (see [\*\*ANSI D16.1\*\*](#)). Default to **11 (Live Animal)** if it cannot be determined if the struck animal is alive, dead, or if it was being ridden or drawing a transport device.

**49 (Ridden Animal or Animal-Drawn Conveyance)** is used for ridden animals and animals drawing transport devices. See **18 (Other Object [Not Fixed])** for an animal carcass.

**18 (Other Object [Not Fixed])** is used when a motor vehicle in-transport strikes a non-fixed object that is known NOT to have been the cargo or part of another motor vehicle in-transport or when it is UNKNOWN whether the object was the cargo or part of another motor vehicle in-transport (i.e., refers to objects such as a dead body, animal carcass, construction cones or barrels, an unattached trailer, a bicycle without a rider, downed tree limbs or power lines, or debris from a prior crash). For objects that have become separated from a motor vehicle in-transport not as a result of a prior crash, use attribute [\*\*73 \(Object That Had Fallen from Motor Vehicle In-Transport\)\*\*](#).

**15 (Non-Motorist on Personal Conveyance)** is used for pedestrians using personal conveyances. A personal conveyance is a device, other than a transport device, used by a pedestrian for personal mobility assistance or recreation. These devices can be motorized or human powered, but not propelled by pedaling.

**Inclusions:**

- 1 Rideable toys
  - a. Roller skates, in-line skates
  - b. Skateboards
  - c. Skates
  - d. Baby carriage
  - e. Scooters
  - f. Toy wagons
- 2 Motorized rideable toys
  - a. Motorized skateboard
  - b. Motorized toy car
  - c. ***Motorized kick scooter***
- 3 Devices for personal mobility assistance
  - a. ***Self-balancing personal conveyance (e.g., Segway-style device)***
  - b. Motorized and non-motorized wheelchair
  - c. ***Mobility aid*** scooters

**Exclusions:**

1. Golf cart
2. Low speed vehicles (LSVs)
3. Go-carts
4. Minibike
5. “Pocket” motorcycles
6. Motor scooters
7. Moped

**14 (Parked Motor Vehicle)** is used when the impact occurred between a motor vehicle in-transport and a motor vehicle neither on a roadway nor in motion. A vehicle stopped off the roadway, its door open over a roadway, is not in-transport.

**45 (Working Motor Vehicle)** is used to indicate the motor vehicle contacted was in the act of performing construction, maintenance, or utility work related to the trafficway when it became an involved unit. The vehicle should be known to be in the act of performing work. This “work” may be located within open or closed portions of the trafficway and motor vehicles performing

these activities can be within or outside the trafficway boundaries. This code does not include private construction/maintenance vehicles, or vehicles such as garbage trucks, delivery trucks, taxis, emergency vehicles, tow trucks, etc. **DO NOT evaluate this attribute on NCSA Body Type alone.**

**Examples:**

1. Asphalt/steam roller working in a highway construction zone paving the roadway or flattening dirt.
2. State highway maintenance crew painting lane lines on the road, mowing grass on the roadside or median, repairing potholes, removing debris from the roadway, etc.
3. Utility truck or a “cherry picker,” performing maintenance on power lines along the roadway or maintaining a traffic signal.
4. A private excavating company contracted by the State digging the foundation for a new overpass.
5. A State, county, or privately-owned snowplow, plowing ice/snow as part of a highway maintenance activity.
6. Street sweeper sweeping the street.
7. A vehicle in a mobile work convoy displaying arrow boards or other signaling devices warning motorists of the work activity.
8. A law enforcement vehicle that is participating strictly in a stationary construction or mobile maintenance activity as a traffic slowing, control, signaling, or calming influence.

**NOTE:** Code “45” excludes working activities other than highway construction, maintenance, or utility vehicles (garbage truck picking up trash, mail/delivery trucks while making deliveries, personal vehicles plowing snow, etc. These are considered motor vehicles In-transport). Use RELATED FACTORS-VEHICLE LEVEL [042 \(Other Working Vehicle \[Not Construction, Maintenance, Utility, Police, Fire, or EMS Vehicle\]\)](#) to identify these vehicles.

A question may arise when a police, fire, or emergency medical vehicle is struck on the roadway while at the scene of a crash, at a traffic stop, or as traffic control. The question becomes, “has its function changed from being a motor vehicle in-transport to a working vehicle?” The answer is “no.” Treat these situations as a motor vehicle in-transport striking another motor vehicle in-transport. Use RELATED FACTORS-VEHICLE LEVEL [041 \(Police, Fire, or EMS Vehicle Working at the Scene of an Emergency or Performing Other Traffic Control Activities\)](#) to identify that this vehicle was struck while performing these work activities.

**73 (Object That Had Fallen from Motor Vehicle In-Transport)** is used when a motor vehicle in- transport impacts a non-fixed object at rest that is known to have been the cargo or part of another motor vehicle in-transport. Do not use this attribute for debris from a prior crash. This attribute does not include vehicle occupants that are ejected or fall from a motor vehicle in-transport. (Example: Motorcycle operator falling from a motorcycle.) For people falling from a motor vehicle, see non-collision event [05 \(Fell/Jumped From Vehicle\)](#). For impacts involving

two motor vehicles in transport resulting from cargo, people, or objects set in motion see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by another Motor Vehicle In-Transport\)](#). For at rest detached trailers (e.g., a detached semi-trailer), use attribute [18 \(Other Object \[Not Fixed\]\)](#). If cargo fell from a vehicle, came to rest, and was struck, this attribute would apply. If the cargo was at rest as a result of a prior crash, use attribute [18 \(Other Object \[Not Fixed\]\)](#).

**91 (Unknown Object Not Fixed)** is used when the event involves an object that is known to be not fixed but the case material does not identify the specific object.

### ***Collision With Fixed Object***

The attributes [58 \(Ground\)](#), [33 \(Curb\)](#), [34 \(Ditch\)](#), and [35 \(Embankment\)](#) are grouped under the **Collision With Fixed Object** subset because they are intended to be harmful events in the crash (i.e., they are associated with an impact that produces injury or damage). When coding these events there must be fields on the police crash report or verbiage in the narrative such as “struck,” “hit,” “impacted,” etc. that identify these as harmful.

For cases where the indication of the harmful event came from the narrative, there may not be a corresponding indication of damage in any police crash report field. In these instances, code the harmful event as stated in the narrative and include the corresponding attribute under [AREAS OF IMPACT](#).

If there is no indication of damage from contact with the fixed object in fields on the police crash report and the narrative language does not identify it as a harmful event (e.g., “came to rest on the embankment,” “drove through” or “drove across” the ditch and/or the embankment, or “drove over” the curb), do not code [33 \(Curb\)](#), [34 \(Ditch\)](#), or [35 \(Embankment\)](#) in the [SEQUENCE OF EVENTS](#).

**17 (Boulder)** is a rock of sufficient mass that when struck by a motor vehicle moves very little and remains basically intact. It may be considered as a fixed object.

**19 (Building)** is used when the vehicle impacts a roofed and walled structure built for permanent use. The type of construction material used is not of interest, nor is the use of the building.

**58 (Ground)** is used when the impact is with an earthen or paved surface off the roadway. **58 (Ground)** is not to be entered when the harmful event is [01 \(Rollover/Overturn\)](#).

Indication of furrowing, gouging, or digging in of the tires/wheels is not sufficient to code the collision event **58 (Ground)**. For example, if the police crash report narrative states, “the trucks tires dug into the turf causing the vehicle to roll over,” the harmful event should be [01 \(Rollover/Overturn\)](#).

**20 (Impact Attenuator/Crash Cushion)** is a device for controlling the absorption of energy released during vehicle collision (crash cushion). Its most common application involves the protection of fixed roadside objects such as bridge piers, elevated gores at exit ramps, etc. Examples include barrels filled with water or sand, and plastic collapsible structures.

**50 (Bridge Overhead Structure)** is used when striking the bottom of a bridge while traveling underneath it. See [Figure 20](#) for a diagram of Bridge Components.

**21 (Bridge Pier or Support)** is a square or round column of stone, concrete, brick, steel, or wood for supporting a bridge between abutments. This attribute includes the bridge abutments

that are supporting the ends of a bridge. Abutments are generally designed for retaining or supporting the embankment under bridge ends and composed of stone, concrete, brick, or wood (includes the wing-walls). See [Figure 20](#) for a diagram of Bridge Components.

**23 (Bridge Rail [Includes Parapet])** is a wooden, brick, stone, concrete, or metal fence-like structure that runs along the outer most edge of the roadway or sidewalk on the bridge or a rail constructed along the top of a parapet. Balustrade is often used synonymously with parapet. See Figure 20 for a diagram of Bridge Components.

- Bridges do not need to support another roadway. It may be an overpass for a train or even for a viaduct (water conduit).

**24 (Guardrail Face)** is a low barrier that has the primary longitudinal structure composed of metal (plates, mesh, box beam, etc.). A guardrail is differentiated from [25 \(Concrete Traffic Barrier\)](#) by the material making up the greatest part of the longitudinal portion of the structure. In the case of guardrails, this is metal whereas in concrete barriers this is concrete (including concrete rails). If the crash report does not differentiate between guardrail face and end, default to guardrail face.

Guardrails that serve as bridge rails should be coded as [23 \(Bridge Rails \[includes Parapet\]\)](#).

**52 (Guardrail End)** is used if a vehicle strikes the end of a guardrail. Guardrails can have a separate flat or rounded piece of metal attached to the end of an expanse of guardrail face.

**25 (Concrete Traffic Barrier)** refers to the longitudinal traffic barriers constructed of concrete. This includes all temporary concrete barriers regardless of location (i.e., temporary Jersey Barrier on a bridge being used to control traffic during bridge repair/construction). Concrete walls (vertical side surfaces) do not apply here; see [39 \(Wall\)](#).

**57 (Cable Barrier)** refers to a flexible barrier system that uses several cables typically supported by steel posts. These barriers are designed to help lessen impact or keep vehicles within the confines of the road.

**26 (Other Traffic Barrier)** is used for all other longitudinal barriers such as wood or rock.

**59 (Traffic Sign Support)** is used when the post supporting a traffic sign, or the sign itself, is hit by a motor vehicle in-transport. This includes mile marker posts and elevated signs.

**46 (Traffic Signal Support)** is used when the post supporting a traffic signal, or the signal itself, is hit by a motor vehicle in-transport. *Use 46 (Traffic Signal Support) for a railroad crossing arm/gate.*

**30 (Utility Pole/Light Support)** refers to supports for highway lighting systems, not including other private lighting systems (e.g., parking lot lights). **30 (Utility Pole/Light Support)** is used for electrical, telephone, cable, and other utility pole-type supports.

**31 (Other Post, Other Pole, or Other Supports)** is used for posts other than highway signs, utility poles, or light supports (reflectors on poles alongside of roadway, parking meters, flag poles, etc.). For mailbox posts, use [53 \(Mailbox\)](#). For fence posts, use [38 \(Fence\)](#).

**32 (Culvert)** is a man-made drain or channel crossing under a road, sidewalk, etc.

**33 (Curb)** is a concrete or asphalt structure that borders the paved surface. It provides drainage control and pavement edge delineation. The face of the curb may be sloped or vertical. Ensure that the case material provide some indication that damage has occurred when a vehicle strikes a curb. This attribute includes collisions with curbing that forms raised islands, medians, or separators. For example, if the report identifies the vehicle struck/collided with a traffic island, channelizing island, raised median, or separator use **33 (Curb)** not [43 \(Other Fixed Object\)](#).

**34 (Ditch)** includes any man-made structure for drainage purposes. A ditch ends where a culvert begins and resumes on the opposite side of the culvert. Reference to a “ditchbank,” “embankment of the ditch,” or “ditch embankment” should be coded under **34 (Ditch)**.

**35 (Embankment)** is a raised structure to hold back water, to carry a roadway, or the result of excavation or washout (including erosion) that may be faced with earth (or rock, stone, or concrete). A **35 (Embankment)** can usually be differentiated from a [39 \(Wall\)](#) by its incline, whereas a wall is usually vertical. However, there are exceptions to this, such as a retaining wall that may be inclined or a vertical embankment that is caused by a natural event such as a washout.

In crashes involving a field approach or driveway crossing, use attribute **35 (Embankment)** when no specific components (e.g., culverts or ditches) are identified.

**38 (Fence)** includes the fence posts. A Fence can be made of wood, chain link, stone, etc.

**39 (Wall)** is a primarily vertical structure composed of concrete, metal, timber, or stone that is not part of a building or a fence but typically is used for retaining earth, abating noise, and separating areas (but not for containment as in the primary function of a fence). Also included as **39 (Wall)** is headwalls (or endwalls) that are sometimes provided on culvert ends principally to protect the sides of the embankment around the culvert opening against erosion. This does not include wing-walls, which are attached to ends of bridge abutments and extend back at an angle from the roadway. Wingwalls should be coded as [21 \(Bridge Pier or Support\)](#).

**40 (Fire Hydrant)** refers to the roadside device used by fire departments to provide water for fighting fires. Usually made of steel, these devices are also referred to as fire plugs or fire standpipes in some areas.

**41 (Shrubbery)** refers to vegetation that is usually of a woody multi-stemmed variety and in most instances is low growing rather than tall. May also be called bushes. Some common examples are boxwood, hawthorn, and mountain laurel.

**42 (Tree [Standing Only])** is used when a vehicle strikes a standing tree. This includes impacts from overhanging branches, tree stumps, or large cactus (Saguaro). If a vehicle strikes a fallen tree, use [18 \(Other Object \[Not Fixed\]\)](#). If a tree falls on a vehicle as it is passing by, use [16 \(Thrown or Falling Object\)](#).

**48 (Snow Bank)** is used when snowfall and/or road plowing creates essentially fixed barriers of snow/ice that are not snow-covered earth or rock embankments.

**53 (Mailbox)** refers to a private residence mail/newspaper box including the post. A cluster of private mailboxes is included in this attribute. This element does not include U.S. Mailbox, which are typically blue and are for general public use. Code a U.S. Mailbox as **43 (Other Fixed Object)**.

**43 (Other Fixed Object)** is used when the object is fixed (considered a permanent structure) and is not described by any of the other fixed object attributes. This attribute excludes collisions with curbing that forms raised islands, medians, or separators (see [33 \(Curb\)](#)).

**Examples:**

- Bus shelters
- Pedestrian walkways
- Toll booths
- Guy wires supporting utility poles
- U. S. Mailbox for public use

Other examples would include property damage to standing crops, yards, and other vegetation (excluding: [41 \(Shrubbery\)](#), [42 \(Tree \[Standing Only\]\)](#), and [58 \(Ground\)](#)) if noted on the crash report.

When the case material identifies a non-specific object impact, apply the following guidelines. If the case material only identifies the harmful event as:

- “Fixed Object,” then use **43 (Other Fixed Object)**
- “Sign,” then use [59 \(Traffic Sign Support\)](#)
- “Post,” then use [31 \(Other Post, Other Pole, or Other Supports\)](#)
- “Signpost,” then use [59 \(Traffic Sign Support\)](#)
- “Bridge,” then use [23 \(Bridge Rail \[Includes Parapet\]\)](#) when the vehicle is on top of the bridge. When the vehicle is going under the bridge, then use [21 \(Bridge Pier or Support\)](#)
- “Barrier,” then use [26 \(Other Traffic Barrier\)](#)

**93 (Unknown Fixed Object)** is used when the event involves an object that is known to be fixed but the case material does not identify the specific object.

***Not Reported/Unknown***

**98 (Harmful Event, Details Not Reported)** is used when a harmful event was reported but the object classification was not reported.

**99 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                  | <b>THEN</b>                                                                                                                                                                                                |
|-----------------|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 252P            | RELATION TO TRAFFICWAY equals 01, 02, 03, 04, 07, 08, 10, 11, 12, 98, or 99,                               | UNIT TYPE for VEHICLE NUMBER (OTHER VEHICLE) involved in the FIRST HARMFUL EVENT must not equal 3.                                                                                                         |

| 98    | <a href="#">Not Reported</a>                                                                  |
| 99    | <a href="#">Reported as Unknown</a>                                                           |

**Definition:** This element identifies the orientation of two motor vehicles in-transport when they are involved in the [FIRST HARMFUL EVENT](#) of a collision crash. If the FIRST HARMFUL EVENT is not a collision between two motor vehicles in-transport, it is classified as such.

### Remarks:

**00 (The First Harmful Event was Not a Collision with a Motor Vehicle In-Transport)** is used when the [FIRST HARMFUL EVENT](#) is not an impact between two in-transport motor vehicles.

**01 (Front-to-Rear)** is used when a collision occurs between the rear of one vehicle and the front of another vehicle. If this attribute is selected, the points of impact for the vehicles involved in the [FIRST HARMFUL EVENT](#) must be front to back.

**02 (Front-to-Front)** is used when a collision occurs between the front end of one vehicle and the front end of another vehicle. If this attribute is selected, the points of impact for the vehicles involved in the [FIRST HARMFUL EVENT](#) must both be front.

**06 (Angle)** is a crash where two motor vehicles impact at an angle. For example, the front of one motor vehicle impacts the side of another motor vehicle. If this attribute is selected, the points of impact for the vehicles involved in the [FIRST HARMFUL EVENT](#) must not be front to front, front to back, back to back, or back to side.

**07 (Sideswipe - Same Direction)** is used when the case material report that a sideswipe occurred while the two vehicles were traveling in the same direction. (See [Figure 2](#).)

**Clarification for coding sideswipe attributes 07 and 08:** Sideswipe codes are used for both vehicles when the initial engagement has no significant involvement of the front or rear surface areas where the impact swipes along the side surfaces of the vehicles parallel to their direction of travel. If it is unclear if the collision was an angle or a sideswipe, then code it [06 \(Angle\)](#). Endswipes and side-to-side angle impacts are coded as [11 \(Other\)](#). (See [Figure 2](#).)

*Figure 2: General Guidelines for Sideswipe Codes 07 and 08*

**08 (Sideswipe - Opposite Direction)** is used when the case material report that a sideswipe occurred while the two vehicles were traveling in opposite directions. (See [Figure 2](#).)

**09 (Rear-To-Side)** is used when a collision occurs between the rear of one vehicle and the side of another vehicle. If this attribute is selected, the points of impact for the vehicles involved in the [FIRST HARMFUL EVENT](#) must back for one and side for the other.

**10 (Rear-To-Rear)** is used when a collision occurs between the rear of one vehicle and the rear of another vehicle. If this attribute is selected, the points of impact for the vehicles involved in the [FIRST HARMFUL EVENT](#) must both be back.

**11 (Other)** should be used for any collision between two motor vehicles in-transport where the collision is not described by attributes “01-10,” including set in motion situations.

**Examples include:**

- One vehicle “end” swipes (endswipe) another vehicle instead of their “sides” swiping.
- One vehicle slides into another vehicle at an angle such that they impact side-to-side.
- One vehicle is airborne and makes contact with its front or undercarriage to the other vehicle’s hood or top.
- Cargo or other load on one motor vehicle in-transport shifts and lands or is thrown into/onto another vehicle.
- The tire of one motor vehicle in-transport throws a stone through the windshield of another vehicle.

- A vehicle occupant or motorcyclist falls or is thrown from a vehicle striking or is struck by another vehicle.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **11 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **98 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Not Reported)** Check to see if [00 \(The First Harmful Event was Not a Collision with a Motor Vehicle In-Transport\)](#) or [99 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

**Code 98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                            | THEN                                                                                                                                                                                                      |

| 19    | <a href="#">Other Location Within Interchange Area</a> |
| 98    | <a href="#">Not Reported</a>                           |
| 99    | <a href="#">Reported as Unknown</a>                    |

**Definition:** The coding of this data element is done in two subfields and based on the location of the [FIRST HARMFUL EVENT](#) of the crash. It identifies the crash's location with respect to presence in an interchange area and the crash's location with respect to presence in or proximity to components typically in junction or interchange areas.

**Remarks:**

**CRSS SPECIAL INSTRUCTION:**

*As of 2020, CRSS coders must use the Geolocator tool provided in RBIS to assist in coding the element **RELATION TO JUNCTION**. This tool must be used to assist with coding only this data element. If the crash report does not provide enough detail to code this element and you are unable to pinpoint the location, you may code 8 (Not Reported) for Subfield 1 or 98 (Not Reported) for Subfield 2, or Not Reported for both.*

**Subfield 1 (C21a): Within Interchange Area?**

**Interchange:** An interchange is a system of interconnecting roadways in conjunction with one or more grade separations, providing for the movement of traffic between two or more roadways on different levels.

See the [Coding Guide: Interchanges](#) for helpful information.

**0 (No)** is used if the [FIRST HARMFUL EVENT](#) of the crash occurs outside of the boundaries of an interchange.

**1 (Yes)** is used if the location of the [FIRST HARMFUL EVENT](#) of the crash is within an interchange area.

**8 (Not Reported)** Check to see if [0 \(No\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation. If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when police indicate unknown.

## **Subfield 2 (C21b): Specific Location**

**01 (Non-Junction)** is used for crashes where the [FIRST HARMFUL EVENT](#) occurs **outside** an interchange area and does not occur in or related to a junction, ramp, rail grade crossing, crossover, or shared-use path or trail. This attribute includes crashes that occur on a parking lot way (access Road) at the connection of a parking aisle. (See [Figure 4](#).)

**02 (Intersection)** is used when the [FIRST HARMFUL EVENT](#) occurs in an area that: (1) contains a crossing or connection of two or more roadways not classified as a driveway access, and (2) is embraced within the prolongation of the lateral curb lines or, if none, the lateral boundary lines of the roadways. Where the distance along a roadway between two areas meeting these criteria is less than 10 meters, the two areas and the roadway connecting them are considered to be parts of a single intersection. *See the [Coding Guide: Intersections](#) for helpful information.*

### **FARS SPECIAL INSTRUCTION:**

**In an Intersection, within Interchange Area:** if the [FIRST HARMFUL EVENT](#) occurs within the intersection of a ramp and the surface roadway: It is important to always code [NATIONAL HIGHWAY SYSTEM](#) and [LAND USE AND FUNCTIONAL SYSTEM](#) for the highest class of trafficway at this intersection.

**03 (Intersection-Related)** means that the [FIRST HARMFUL EVENT](#): (1) occurs on an approach to or exit from an intersection and (2) results from an activity, behavior, or control related to the movement of traffic units through the intersection. *See the [Coding Guide: Intersections](#) for helpful information.*

### **Notes:**

- For crashes where the [FIRST HARMFUL EVENT](#) occurs in a crosswalk at an intersection area, use **03 (Intersection-Related)**.
- For Traffic Circles and Roundabouts, enter **02 (Intersection)** when the [FIRST HARMFUL EVENT](#) occurs within the area formed by the prolongation of curb or edge lines of the approach legs of the intersection, regardless of whether or not the collision was in any way related to an intersection. Use **03 (Intersection-Related)** if the [FIRST HARMFUL EVENT](#) occurs in the central island or any directional island that serves the rotary intersection.

**05 (Entrance/Exit Ramp Related)** is used when the [FIRST HARMFUL EVENT](#) occurs off the entrance/exit ramp roadway, but is related to the use of or entry onto the ramp. (See [Figure 3](#).)

**Note:** If the [FIRST HARMFUL EVENT](#) occurs in the intersection of a ramp, then use **02 (Intersection)**. If the [FIRST HARMFUL EVENT](#) occurs on the ramp outside of an intersection of the ramp and the surface roadway and is related to the movement of traffic through the intersection, then use **03 (Intersection-Related)**.

**20 (Entrance/Exit Ramp)** is used when the [FIRST HARMFUL EVENT](#) occurs **on** an entrance or exit ramp roadway and is not the result of an activity, behavior, or control related to the movement of traffic units through an intersection. This would include all the areas between the gore and entrance/exit ramp intersection. (See [Figure 3](#).)

**06 (Railway Grade Crossing)** is used when the [FIRST HARMFUL EVENT](#) occurred in the area formed by the at-grade connection of a railroad bed and a roadway. Crashes occurring outside a railway grade crossing due to traffic congestion associated with a railway grade crossing are considered non-junction.

**07 (Crossover-Related)** is used when the [FIRST HARMFUL EVENT](#) occurs in a crossover or on approach to or exit from a crossover and related to the use of the crossover.

**Note:** A crossover is the area of the median of a divided trafficway where motor vehicles are permitted to cross the opposing lane of traffic or execute a U-turn.

**04 (Driveway Access)** is used when the [FIRST HARMFUL EVENT](#) occurs:

1. on a driveway access ([See ANSI D16.1 Manual 2.5.9](#)) ([See Figure 5.](#))
2. or involves a road vehicle entering or leaving by way of a driveway access where at least one traffic unit (vehicle, pedalcyclist, or pedestrian) is physically on the driveway access within the trafficway.

This attribute includes crashes occurring on sidewalks within the driveway access.

**Examples:**

- A car turning into a private residence driveway strikes a bicyclist riding on the sidewalk that crosses over the driveway access.
- A tractor trailer backing out of a business entrance onto the trafficway, while partially on the driveway access, is struck by a car on the roadway.

**08 (Driveway Access Related)** is used when the [FIRST HARMFUL EVENT](#):

1. occurs adjacent to a driveway,
2. does not occur on a [04 \(Driveway Access\)](#), but
3. results from an activity, behavior, or control related to the movement of traffic units onto or out of a driveway ([See ANSI D16.1 Manual 2.5.9.1](#)). ([See Figure 5.](#))

**Examples:**

- A vehicle attempting to turn left into a driveway from the eastbound lanes is struck broadside by another vehicle traveling in the westbound lanes,
- A vehicle that has just entered the trafficway from a driveway is struck in the rear before it can gain speed.

**Note:** When a driveway access junction is within an intersection and the crash would meet the criteria of driveway access or driveway access related, enter [02 \(Intersection\)](#) if the [FIRST HARMFUL EVENT](#) was within the boundaries of the intersection or [03 \(Intersection-Related\)](#) if it was not, but related to the intersection.

**Note:** If there is not sufficient detail available to differentiate between driveway access and driveway access related, but it is known that the vehicle was coming out of (or going into) a driveway, default to **08 (Driveway Access Related)**. ([See Figure 5.](#))

**16 (Shared-Use Path Crossing)** is used when the [FIRST HARMFUL EVENT](#) occurs at the crossing of a roadway and a shared-use path (see **Note** below for the definition of a shared use

path). At least one non-motorist has to be physically in the crossing of the roadway and the shared-use path, and the crash has to be related to the use of it. If the crossing of a roadway and a shared-use path overlaps/coincides with a crosswalk in a non-intersection area (e.g., mid-block), then select **16 (Shared-Use Path Crossing)**.

**Note:** A shared-use path is a bikeway **physically separated** from motorized vehicular traffic by an open space or barrier and either within the highway right of way or an independent right of way. Shared-use paths will also be used by pedestrians, skaters, wheelchairs, joggers, and other non-motorist users. A shared-use path is not a sidewalk, and where a shared-use path crosses another land way is similar to, but not, a crosswalk. A shared-use path crossing may overlap/coincide with a crosswalk.

**17 (Acceleration/Deceleration Lane)** is used when the [FIRST HARMFUL EVENT](#) occurs on the roadway in an interchange area on an auxiliary or speed-change lane that allows vehicles to accelerate to highway speeds before entering the through roadway or decelerate to safe speeds to negotiate a ramp without interrupting traffic flow on the through roadway exited. (See [Figure 3](#).)

**18 (Through Roadway)** (See [Figure 3](#).) is used when the [FIRST HARMFUL EVENT](#) occurs on the roadway within an interchange area but **does not** occur:

- In an intersection or related to an intersection - [02 \(Intersection\)](#) or [03 \(Intersection - Related\)](#).
- On a [20 \(Entrance/Exit Ramp\)](#) or related to the use of the ramp - [05 \(Entrance/Exit Ramp Related\)](#).
- In a [17 \(Acceleration/Deceleration Lane\)](#).

**19 (Other Location Within Interchange Area)** is used when the [FIRST HARMFUL EVENT](#) occurs within an Interchange, off the roadway (e.g., median, shoulder, roadside) and is not related to the use of or the entry onto a ramp. (See [Figure 3](#).)

**Examples:**

- A vehicle on the through roadway portion of the interchange departs the roadway and overturns in the median.
- A vehicle leaves the through roadway portion of the interchange and strikes a vehicle parked on the shoulder.

**98 (Not Reported)** *Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS

attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

Valid Combinations for Subfield 1 and Subfield 2

| If <a href="#">Subfield TWO</a> is coded:        | <a href="#">Subfield ONE</a> may only be coded as:                             |

| Codes     | Attributes                                     |
|-----------|------------------------------------------------|
| 01        | <a href="#">Not an Intersection</a>            |
| 02        | <a href="#">Four-Way Intersection</a>          |
| 03        | <a href="#">T-Intersection</a>                 |
| 04        | <a href="#">Y-Intersection</a>                 |
| 05        | <a href="#">Traffic Circle</a>                 |
| 06        | <a href="#">Roundabout</a>                     |
| 07        | <a href="#">Five-Point, or More</a>            |
| 10        | <a href="#">L-Intersection</a>                 |
| <b>11</b> | <b><a href="#">Other Intersection Type</a></b> |
| 98        | <a href="#">Not Reported</a>                   |
| 99        | <a href="#">Reported as Unknown</a>            |

**Definition:** This element identifies and allows separation of various intersection types.

**Remarks:** The data element value selected should be based on the location of the [FIRST HARMFUL EVENT](#) and is only applicable to intersection or intersection-related crashes.

If it is known that a rotary type of intersection was involved but it is not known if it was a [05 \(Traffic Circle\)](#) or a [06 \(Roundabout\)](#), default to a [05 \(Traffic Circle\)](#).

Intersection refers to an area that 1) contains a crossing or connection of two or more roadways not classified as driveway access, and 2) is embraced within the prolongation of the lateral curb lines, or if none, the lateral boundary lines of the roadways. Where the distance along a roadway between two areas meeting these criteria is less than 33 feet, the two areas and the roadway connecting them are considered to be parts of a single intersection. (See [ANSI D.16 - 2.5.10](#))

**01 (Not an Intersection)** identifies that this crash was not intersection or intersection related.

**02 (Four-Way Intersection)** refers to two roadways that cross or connect.

**03 (T-Intersection)** refers to an intersection where two roadways connect, and one roadway does not continue across the other roadway. The roadways form a “T.”

**04 (Y-Intersection)** refers to an intersection where three roadways connect and none of the roadways continue across the other roadways. The roadways form a “Y.”

**05 (Traffic Circle)** refers to an intersection of roads where motor vehicles must travel around a circle to continue on the same road or leave on any intersecting road.

A **05 (Traffic Circle)** must meet the following criteria:

- Entering traffic is controlled by a stop sign, traffic signal, or by no traffic control
- Parking is allowed within the circle
- Pedestrians are allowed access to the central island
- Circle traffic can be required to yield to entering traffic

**06 (Roundabout)** refers to an intersection of roads where motor vehicles must travel around a circle to continue on the same road or leave on any intersecting road. (See [Figure 7](#) below.) A **06 (Roundabout)** must meet the following criteria:

- Entering traffic is controlled by a yield sign only
- Circulating traffic has the right of way
- Pedestrian access is allowed behind the yield sign line
- No parking is allowed in the circle

*Figure 7: Example of a Typical Single-Lane Roundabout*

(See [Roundabouts: An Informational Guide - FHWA](#))

**07 (Five-Point, or More)** refers to an intersection where more than two roadways cross or connect.

**10 (L-Intersection)** refers to a two-armed intersection in which one roadway intersects with another roadway but neither roadway extends beyond the other roadway. (Note: This should be configured as an intersection where the arms consist of two different named trafficways.)

**11 (Other Intersection Type)** refers to an intersection design not captured under one of the other attributes.

**98 (Not Reported)** Check to see if [01 \(Not an Intersection\)](#) or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID    | IF                                                    | THEN                                            |
|-------------|-------------------------------------------------------|-------------------------------------------------|
| 251P        | RELATION TO TRAFFICWAY equals 98, 99,                 | TYPE OF INTERSECTION should equal 98, 99.       |
| 778P        | RELATION TO JUNCTION (b) equals 01, 04-08, 16-20,     | TYPE OF INTERSECTION must equal 01.             |
| 782P        | TYPE OF INTERSECTION equals 02-07, 10, <b>or 11</b> , | RELATION TO JUNCTION (b) must equal 02, 03.     |
| 783P        | RELATION TO JUNCTION (b) equals 98, 99,               | TYPE OF INTERSECTION should equal 01, 98, 99.   |
| 784P        | TYPE OF INTERSECTION equals 01,                       | RELATION TO JUNCTION (b) must not equal 02, 03. |
| <b>U698</b> | <b>UNLIKELY: TYPE OF INTERSECTION equals 11.</b>      | --                                              |

**Consistency Checks (FARS Only)** [\(See Section 400\)](#):

| Error ID | IF                                                    | THEN                                           |
|----------|-------------------------------------------------------|------------------------------------------------|
| 781P     | TYPE OF INTERSECTION equals 02-07, 10, <b>or 11</b> , | TRAFFICWAY IDENTIFIER (b) should not be blank. |

## C23 - Relation to Trafficway

**FORMAT:** 2 numeric

**SAS NAME:** Accident.REL\_ROAD

**ELEMENT VALUES:**

| Codes | Attributes                                                 |

| 12    | <a href="#">Pedestrian Refuge Island or Traffic Island</a> |
| 98    | <a href="#">Not Reported</a>                               |
| 99    | <a href="#">Reported as Unknown</a>                        |

**Definition:** This element identifies the location of the crash as it relates to its position within or outside the trafficway based on the [FIRST HARMFUL EVENT](#).

**Remarks:** See the [Coding Guide: Trafficway Components](#) for helpful information.

**01 (On Roadway)** - The roadway is that part of a trafficway designed, improved, and ordinarily used for motor vehicle travel or, where various classes of motor vehicles are segregated, that part of a trafficway used by a particular class. Separate roadways may be provided for northbound and southbound traffic or for trucks and automobiles. Roadway may be noted as the “travel lanes” and, if present, includes the area between the painted “fog lines.” Additionally, a driveway access area is considered part of the roadway of the trafficway to that it connects. This attribute may also be used for cases involving a parked vehicle opening a door into moving traffic, extended mirrors into the travel lane. If a bike lane is immediately adjacent to the curb/edge of the road, code [04 \(On Roadside\)](#). If the bike lane is between lanes of travel or a lane and the parking lane, code **01(On Roadway)**.

**02 (On Shoulder)** (if present) is that part of a trafficway contiguous with the roadway for emergency use, for accommodation of stopped vehicles, and for lateral support of the roadway structure. A shoulder should be improved or maintained for these purposes. Not all roadways have shoulders.

**03 (On Median)** is defined as that area of a divided trafficway between parallel roads separating travel in opposite directions. The principal functions of a median are to provide the desired freedom from interference of opposing traffic, to provide a recovery area for out-of-control vehicles, to provide a stopping area in case of emergencies, and to minimize headlight glare. Medians may be depressed, raised, or flush. Flush medians can be as little as 4-feet wide between roadway edge lines. Painted roadway edge lines four (4) or more feet wide denote medians. Medians of lesser width must have a barrier to be considered a median. Continuous Left-turn Lanes are **not** considered Medians (see [11 \(Continuous Left-Turn Lane\)](#)).

**04 (On Roadside)** refers to a location off the roadway, but inside the right-of-way. It is the outermost part of the trafficway that lays between the outer property line or other barrier and the edge of the first road encountered in the trafficway. Bicycle lanes and shared use path or trails contiguous with the roadway and sidewalks are also included. For cases involving a vehicle that goes off the roadway into a “tree line,” “wood line,” “brush line,” etc. that is adjacent to the roadway, code as **04 (On Roadside)** unless there is specific information available in the case material that identify the [FIRST HARMFUL EVENT](#) was beyond the boundaries of the trafficway (e.g., a “tree line” in a homeowner’s front yard). If a bike lane is immediately adjacent to the curb/edge of the road, code **04 (On Roadside)**. If the bike lane is between lanes of travel or a lane and the parking lane, code [01 \(On Roadway\)](#).

**05 (Outside Trafficway)** is used for areas not open to the public as a matter of right or custom for moving people or property. This includes property beyond the roadside outside the boundaries of the trafficway. Also, a portion of the trafficway closed for construction is not a trafficway and would be considered **05 (Outside Trafficway)**.

**06 (Off Roadway - Location Unknown)** refers to a location off the roadway, but its relationship to the trafficway boundaries/right-of-way is not known. This should only be used when no reasonable assessment can be made as to the location of the [FIRST HARMFUL EVENT](#) because the information in the case is too ambiguous.

**07 (In Parking Lane/Zone)** refers to an area on the roadway, or next to the roadway, on which parking is permitted in marked or unmarked spaces. This includes curbside and edge of-roadway parking (legal residential parking, city-street parking, etc.). Sometimes a strip of roadway can be designated for parking at certain hours of the day (parking lane) and for regular travel at other hours (travel lane). This code should NOT be used during hours when parking is NOT permitted (see [01 \(On Roadway\)](#)).

**08 (Gore)** is an area of land where two roadways diverge or converge. The area is bounded on two sides by the edges of the roadway, which join at the point of divergence or convergence. The direction of traffic must be the same on both of these roadways. The area includes shoulders or marked pavement if any, between the roadways. The third side is 60 meters (approximately 200 feet) from the point of divergence or convergence or, if any other road is within 70 meters (230 feet) of that point, a line 10 meters (33 feet) from the nearest edge of such road. (See [Figure 11](#))

**Gore Inclusions:**

- Areas at rest area or exit ramps
- Areas at truck weight station entry or exit ramps
- Areas where two main roadways diverge or converge

- Areas where a ramp and another roadway, or two ramps, diverge or converge
- Areas where a frontage road and another roadway or two frontage roads diverge or converge

**Gore Exclusions:**

- Islands for channelizing of vehicle movements. Code these as [12 \(Pedestrian Refuge Island or Traffic Island\)](#).
- Islands for pedestrian refuge. Code these as [12 \(Pedestrian Refuge Island or Traffic Island\)](#).

**10 (Separator)** is the area of a trafficway between parallel roads separating travel in the same direction or separating a frontage road from other roads. A **10 (Separator)** may be a physical barrier or a depressed, raised, flush, or vegetated area between roads.

**11 (Continuous Left-Turn Lane)** is a two-way left turn lane positioned between opposing straight-through travel lanes.

**12 (Pedestrian Refuge Island or Traffic Island)** is coded when case material indicate the [FIRST HARMFUL EVENT](#) occurred on a Pedestrian Refuge Island or Traffic Island.

Examples include areas:

- between roadways of a trafficway meant to allow for a non-motorist to pause while traveling from one side of a trafficway to the other side;
- for channelizing the flow of traffic at an intersection;
- in the center of a traffic circle or roundabout;
- dividing the entrance and exit in a driveway access.

**98 (Not Reported)** *Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.* If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

## ***Additional Guidance for Relation to Trafficway***

### **For collision events when the vehicle is overlapping adjacent areas:**

- For [fixed object collisions](#) ([FHE](#)), base RELATION TO TRAFFICWAY on the location of the object struck.
- Fixed objects that are associated with the Trafficway such as curbs, ditches, guardrails, sign supports, utility poles, etc. are not located in the travel lanes or on the shoulder. Therefore, when these fixed objects are contacted in the [FIRST HARMFUL EVENT](#), RELATION TO TRAFFICWAY should be coded with respect to the location of the object contacted (e.g., [04 \(On Roadside\)](#), [03 \(On Median\)](#), [12 \(Pedestrian Refuge Island or Traffic Island\)](#), etc.), regardless of the location of the entire vehicle.
- [Non-fixed object collisions](#) (e.g., striking a vehicle on the shoulder or pedestrian on the sidewalk) when the striking vehicle is overlapping two locations (e.g., roadway and shoulder) are also coded with respect to the object contacted, not the striking vehicle.

### **For Rollover/Overtake crashes when the vehicle is overlapping two locations (e.g., roadway and shoulder) when the roll begins:**

- When a vehicle begins an overturn and is overlapping two locations at the onset of the overturn, use the LAST area the vehicle entered as the location. For example, [04 \(On Roadside\)](#) would be correct for a case where the documentation identifies a vehicle runs off the roadway, partially through the shoulder, and the front wheels enter the roadside.

### **Default rules for the location of Ditches, Culverts, Embankments, and Fences:**

- Unless there is clear reason to believe otherwise in the case material, ditches, culverts, and embankments are design features common to Trafficways. Therefore, if included as the FHE the appropriate RELATION TO TRAFFICWAY is [04 \(On Roadside\)](#).
- All fences are considered [05 \(Outside Trafficway\)](#) unless, the case material specifically identify the fence is within the trafficway property lines (e.g., a snow fence in the median, or fence identified as government property delineating the right of way and/or property line).

### **Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                | <b>THEN</b>                                                                                            |
|-----------------|----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 250P            | RELATION TO JUNCTION (b) equals 01, 02, 04, 06, 07, 16-19, 98, 99, and RELATION TO TRAFFICWAY equals 03, | TRAFFICWAY DESCRIPTION should equal 2, 3 for at least one vehicle involved in the FIRST HARMFUL EVENT. |
| 251P            | RELATION TO TRAFFICWAY equals 98, 99,                                                                    | TYPE OF INTERSECTION should equal 98, 99.                                                              |
| 252P            | RELATION TO TRAFFICWAY equals 01, 02, 03, 04, 07, 08, 10, 11, 12, 98, or 99,                             | UNIT TYPE for VEHICLE NUMBER (OTHER VEHICLE) involved in the FIRST HARMFUL EVENT must not equal 3.     |

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                  | <b>THEN</b>                                                                                                                                                |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 253P            | RELATION TO TRAFFICWAY equals 03,                                                                                                                          | CRASH TYPE should equal 06-10, 98, or 99 for the in-transport vehicles involved in the FIRST HARMFUL EVENT.                                                |
| 254P            | RELATION TO TRAFFICWAY equals 01, and RELATION TO JUNCTION (b) equals 20,                                                                                  | TRAFFICWAY DESCRIPTION must equal 6 for at least one vehicle involved in the FIRST HARMFUL EVENT.                                                          |
| 255P            | RELATION TO TRAFFICWAY equals 01 or 11,                                                                                                                    | UNIT TYPE for VEHICLE NUMBER (THIS VEHICLE) involved in the FIRST HARMFUL EVENT must equal 1.                                                              |
| 256P            | RELATION TO TRAFFICWAY equals 01 or 11,                                                                                                                    | UNIT TYPE for VEHICLE NUMBER (OTHER VEHICLE) involved in the FIRST HARMFUL EVENT should equal 1 or 4.                                                      |
| 257P            | RELATION TO TRAFFICWAY equals 05,                                                                                                                          | UNIT TYPE for VEHICLE NUMBER (OTHER VEHICLE) involved in the FIRST HARMFUL EVENT must equal 1, 3, or 4.                                                    |
| 42AP            | NUMBER OF MOTOR VEHICLE FORMS SUBMITTED equals 001, and RELATION TO TRAFFICWAY equals 02, 04, 06-08, 12, and ATTEMPTED AVOIDANCE MANEUVER equals 00 or 01, | CRITICAL EVENT - PRECRASH (EVENT) should equal 01-06, 08-14, or 19.                                                                                        |

## C24 - Work Zone

**FORMAT:** 1 numeric

**SAS NAME:** Accident.WRK\_ZONE

**ELEMENT VALUES:**

| Codes | Attributes                              |
|-------|-----------------------------------------|
| 0     | <a href="#">None</a>                    |
| 1     | <a href="#">Construction</a>            |
| 2     | <a href="#">Maintenance</a>             |
| 3     | <a href="#">Utility</a>                 |
| 4     | <a href="#">Work Zone, Type Unknown</a> |

**Definition:** This data element captures that this was a “Work Zone Crash” as defined in [ANSI D16.1, 8th Edition](#). If the crash qualifies as a “Work Zone Crash” then the type of work activity is identified.

**Remarks:** If the crash is a work zone crash, work zone type must be clearly distinguished within the case material; otherwise [4 \(Work Zone, Type Unknown\)](#) should be used.

The use of these codes does not imply that the crash was caused by the construction, maintenance, or utility activity.

### Work Zone:

A work zone is defined as an area of a trafficway where construction, maintenance, or utility work activities are identified by warning signs/signals/ indicators, including those on transport devices (e.g., signs, flashing lights, channelizing devices, barriers, pavement markings, flagmen, warning signs, and arrow boards mounted on the vehicles in a mobile maintenance activity) that mark the beginning and end of a construction, maintenance, or utility work activity. It extends from the first warning sign, signal, or flashing lights to the END ROAD WORK sign or the last traffic control device pertinent for that work activity. Work zones also include roadway sections where there is ongoing, moving (mobile) work activity such as lane line painting or roadside mowing only if the beginning of the ongoing, moving (mobile) work activity is designated by warning signs or signals.

### Work Zone Crash:

A work zone crash is a motor vehicle traffic crash in which the [FIRST HARMFUL EVENT](#) occurs within the boundaries of a work zone or on an approach to or exit from a work zone, resulting from an activity, behavior, or control related to the movement of the traffic units through the work zone.

See the [8th Edition of ANSI D16.1](#) definitions of “Work Zone” and “Work Zone Crash” for inclusions and exclusions.

To determine which attribute is appropriate, the duration of the work must be considered. If the work is short-term (i.e., takes less than one period of daylight and is not performed during hours

of darkness), **2 (Maintenance)** or **3 (Utility)** are applicable. If the maintenance or utility work is long-term, **1 (Construction)** must be used.

**0 (None)** is used when there is no indication that the crash is a work zone crash as defined above.

**1 (Construction)** is used when the available information indicates that there is long-term stationary construction such as building a new bridge, adding travel lanes to the roadway, extending an existing trafficway, etc. Highway construction includes construction of appurtenances such as guardrails or ditches, surveying activity, installation of utilities within the right-of-way, etc.

**2 (Maintenance)** is used when the available information indicates that there are work activities, including moving work activities, such as striping the roadway, median and roadside grass mowing/landscaping, pothole repair, snowplowing, etc., where there are warning signs or signals marking the beginning of the moving work area.

**3 (Utility)** is used when the available information indicates that there is short-term stationary work such as repairing/maintaining electric, gas, water lines, or traffic signals. The utility company must perform the work.

**4 (Work Zone, Type Unknown)** is used when there is insufficient information to distinguish between

[1 \(Construction\)](#), [2 \(Maintenance\)](#), or [3 \(Utility\)](#).

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                        | <b>THEN</b>                                                                                                               |
|-----------------|----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| A293            | WORK ZONE equals 1-3, and RELATION TO JUNCTION (b) equals 02, 03,                | TRAFFIC CONTROL DEVICE should equal 01-03, 20, 40, 97, or 98 for the vehicle(s) involved in the FIRST HARMFUL EVENT.      |
| A294            | WORK ZONE equals 1-3, and RELATION TO JUNCTION (b) equals 01, 04, 05, 08, 17-19, | TRAFFIC CONTROL DEVICE should equal 00, 21, 28, 40, 50, 97, or 98 for the vehicle(s) involved in the FIRST HARMFUL EVENT. |
| A470            | WORK ZONE equals 0, and TRAFFICWAY DESCRIPTION equals 1-3, 5,                    | TOTAL LANES IN ROADWAY should not equal 1.                                                                                |
| AL2P            | SEQUENCE OF EVENTS equals 45,                                                    | WORK ZONE should equal 1-4.                                                                                               |

## C25 - Light Condition

**FORMAT:** 1 numeric

**SAS NAME:** Accident.LGT\_COND

**ELEMENT VALUES:**

| Codes | Attributes                              |
|-------|-----------------------------------------|
| 1     | <a href="#">Daylight</a>                |
| 2     | <a href="#">Dark - Not Lighted</a>      |
| 3     | <a href="#">Dark - Lighted</a>          |
| 6     | <a href="#">Dark - Unknown Lighting</a> |
| 4     | <a href="#">Dawn</a>                    |
| 5     | <a href="#">Dusk</a>                    |
| 7     | <a href="#">Other</a>                   |
| 8     | <a href="#">Not Reported</a>            |
| 9     | <a href="#">Reported as Unknown</a>     |

**Definition:** This element records the type/level of light that existed at the time of the crash as reported in the case material.

### Remarks:

**1 (Daylight)** is used when the available information describes the crash conditions occurring while natural light is the main source of lighting and it is not **4 (Dawn)** or **5 (Dusk)**. If the crash occurs within a tunnel, code the lighting described for the tunnel.

**2 (Dark - Not Lighted)** is used when the available information describes a condition where no “natural” light exists, and no overhead “man-made” lighting is present on the roadway where the crash occurs.

**3 (Dark - Lighted)** is used when the available information describes a condition where no “natural” light exists but there is overhead “man-made” lighting on the roadway where the crash occurs. Lighted areas will generally include streets within cities or towns and some interchange areas. This does not include lighting from store fronts, houses, parking lots, etc.

**6 (Dark - Unknown Lighting)** is used if it cannot be determined if **2 (Dark - Not Lighted)** or **3 (Dark - Lighted)** applies.

Sometimes the case material will have conflicting information because more than one light condition is indicated in the coded boxes and/or the narrative or the coded box is blank. If necessary, use the [CRASH TIME](#) to aid in determining the “best” attribute.

**4 (Dawn)** describes the transition period going from “dark of night” to a daylight condition. This is typically the 30-minute period before the sun rises.

**5 (Dusk)** describes the transition period going from a daylight condition to the “dark of night.” This is typically the 30-minute period after the sun sets.

### Rules for determining applicable attribute:

1. If **4 (Dawn)** or **5 (Dusk)** are marked, use the [CRASH TIME](#) to select either [4 \(Dawn\)](#) or [5 \(Dusk\)](#).
2. If **3 (Dark - Lighted)** and **4 (Dawn)** are marked, use [4 \(Dawn\)](#).
3. If **3 (Dark - Lighted)** and **5 (Dusk)** are marked, use [5 \(Dusk\)](#).
4. If **Dark** and **5 (Dusk)** are marked, use [5 \(Dusk\)](#).
5. If **Dark** and **4 (Dawn)** are marked, use [4 \(Dawn\)](#).
6. If more than 2 attributes are checked, use [8 \(Not Reported\)](#).

**7 (Other)** is used when the conditions above do not apply.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **7 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **8 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**8 (Not Reported)** Check to see if [9 \(Reported as Unknown\)](#) is more appropriate for the situation. If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks is NOT considered “**Not Reported.**”

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when the investigating officer indicates that the lighting condition was unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                               | <b>THEN</b>                                  |
|-----------------|---------------------------------------------------------|----------------------------------------------|
| 220P            | LIGHT CONDITION equals 4, and STATE is not equal to 02, | CRASH TIME must equal 0300-0900, 9999.       |
| 2300            | LIGHT CONDITION equals 5, and STATE is not equal to 02, | CRASH TIME should equal 1600-2200, 9999.     |

| 10    | <a href="#">Cloudy</a>                   |
| 02    | <a href="#">Rain</a>                     |
| 03    | <a href="#">Sleet or Hail</a>            |
| 12    | <a href="#">Freezing Rain or Drizzle</a> |
| 04    | <a href="#">Snow</a>                     |
| 11    | <a href="#">Blowing Snow</a>             |
| 05    | <a href="#">Fog, Smog, Smoke</a>         |
| 06    | <a href="#">Severe Crosswinds</a>        |
| 07    | <a href="#">Blowing Sand, Soil, Dirt</a> |
| 08    | <a href="#">Other</a>                    |
| 98    | <a href="#">Not Reported</a>             |
| 99    | <a href="#">Reported as Unknown</a>      |

**Definition:** This element identifies the prevailing atmospheric conditions that existed at the time of the crash as recorded on the police crash report.

**Remarks:** *If* the case material attributes are a combination of the above attributes (e.g., Clear/Cloudy, Clear or Cloudy, Sleet/Hail/Freezing Rain, Snow/Sleet/Hail), and you cannot determine which was the prevalent weather condition, then code [98 \(Not Reported\)](#).

Temperature is not an atmospheric condition for the purposes of this element.

When coding this element, do not interpret indication of Rain, Sleet, or Snow as also Cloudy. Cloudy must be explicitly stated in the case material.

**01 (Clear)** includes partial cloudiness if sunlight is not diminished. If your case material provide the attribute “no adverse condition,” use [98 \(Not Reported\)](#) unless there is sufficient detail to establish that **01 (Clear)** or **10 (Cloudy)** applies.

**10 (Cloudy)** usually refers to “overcast” but may include partial cloudiness if light is diminished.

**02 (Rain)** refers to precipitation other than snow, hail, or sleet.

**03 (Sleet or Hail)** would apply to conditions where precipitation is falling as ice (sleet or hail)

**12 (Freezing Rain or Drizzle)** would apply when precipitation is falling as liquid (rain) and then freezing on the roadway.

**04 (Snow)** is used when precipitation is falling as frozen flakes at the time of the crash.

**11 (Blowing Snow)** applies to snow that is falling and/or to snow that has fallen to the ground and is set aloft by wind.

**05 (Fog, Smog, Smoke)** refers to a natural or man-made condition that causes reduced visibility.

**06 (Severe Crosswinds)** refers to winds traveling at an angle with respect to the travel lanes at velocities significant enough to create a risk that vehicles could be diverted from their path or high-profile vehicles could be blown over. These are winds that are strong enough to affect vehicle stability.

**07 (Blowing Sand, Soil, Dirt)** refers to particulate matter set aloft by winds creating a condition of reduced visibility that constitutes a hazard for vehicles operating in the area. This attribute should be used for “dust storms.” This attribute should not be used in conjunction with [06 \(Severe Crosswinds\)](#) unless the winds are affecting vehicle stability in addition to reducing visibility.

**08 (Other)** atmospheric conditions not described above.

If a police crash report data element is coded with the attribute “Other” but the officer does not specify what this refers to:

1. Code **08 (Other)** if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code **98 (Not Reported)** if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Not Reported)** *Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported.**”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used when police indicate unknown.

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                               | <b>THEN</b>                                                                 |

## C27 - School Bus Related

**FORMAT:** 1 numeric

**SAS NAME:** Accident.SCH\_BUS, Person.SCH\_BUS

**ELEMENT VALUES:**

| Codes | Attributes          |
|-------|---------------------|
| 0     | <a href="#">No</a>  |
| 1     | <a href="#">Yes</a> |

**Definition:** This data element indicates if a school bus, or motor vehicle functioning as a school bus, is related to the crash.

### Remarks:

The “school bus” can be:

- with or without a passenger(s) on board
- involved as a contact motor vehicle, or
- indirectly involved as a non-contact motor vehicle

A school bus is a motor vehicle used for the transportation of any school pupil at or below the 12th-grade level to or from a public or private school or school-related activity. A motor vehicle is not a school bus while on trips that involve the transportation exclusively of other passengers or exclusively for other purposes.

A motor vehicle is a school bus only if it is externally identifiable by the following characteristics:

1. Its color is yellow
2. The words “school bus” appear on the front and rear
3. Flashing red lights are located on the front and rear
4. Lettering on both sides identifies the school or school district served, or the company operating the bus

**0 (No)** is used when there is no indication of a school bus, or motor vehicle functioning as a school bus, being involved in the crash.

**1 (Yes)** is used when there is any indication that a school bus, or vehicle functioning as a school bus, is involved in any component of the crash.

For directly involved or contacted vehicles, **1 (Yes)** must be selected if the [SPECIAL USE](#) data element equals [02 \(Vehicle Used for School Transport\)](#).

To capture those instances where the vehicle is involved indirectly (non-contact vehicle) the following rules apply:

- If the case material indicate “School Bus,” the assumption is that the law enforcement agency conformed to the definition of school bus; thus **1 (Yes)** School Bus Related.
- If there is no indication that a school bus was indirectly involved, **0 (No)** must be selected.

**Examples of School Bus Related (indirectly):**

1. A police-reported “school bus” stops on the roadway. Subsequently an approaching motor vehicle swerves to avoid the stopped bus and contacts another motor vehicle head-on.
2. A police report indicates that a “child” exited a “school bus” and was crossing in front of the stopped bus when a vehicle passed the bus on the left side and struck the child.
3. A line of cars is stopped for a school bus that is discharging passengers. A motor vehicle approaches and is unable to stop in time and strikes the last stopped motor vehicle in the line.

**Examples of NOT School Bus Related:**

1. An empty school bus, having completed its route, is parked alongside the road. A motor vehicle approaching from the rear loses control and strikes the bus.
2. A “Bus” is reported as stopped in traffic and a vehicle swerves to avoid the bus and contacts another vehicle. In this example, there is no positive indication of a “school bus” being involved.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                      | <b>THEN</b>                                                                                                                                                                                                                                                   |

## C28 - Rail Grade Crossing Identifier - FARS Only

**FORMAT:** 6 numeric followed by 1 alphabetic

**SAS NAME:** Accident.RAIL

### ELEMENT VALUES:

| Codes   | Attributes                                                |
|---------|-----------------------------------------------------------|
| 0000000 | <a href="#">Not Applicable</a>                            |
| nnnnnnA | Six Numeric, Followed by One Alphabetic Valid F.R.A. Code |
| 9999999 | Unknown                                                   |

**Definition:** This element identifies if the crash occurred in or near a Rail Grade Crossing.

**Remarks:** Code complete identifier. The format must always be six numbers followed by a letter. (Two exceptions: **0000000 (Not Applicable)** and **9999999 (Unknown)**.)

Identifiers are obtainable from your Federal Railroad Administration representative or by accessing the [Federal Railroad Administration Office of Safety Analysis](#).

**0000000 (Not Applicable)** is used for a crash that does not involve a rail grade crossing.

Code when any part of the crash occurs at a rail grade crossing. Include a crash in which a vehicle is waiting at a rail grade crossing but does not necessarily travel over the tracks.

Inform NHTSA if you have any problems obtaining identifiers.

### Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                         | THEN                                                   |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| 1Y0P     | RELATION TO JUNCTION(b) equals 06,                                                                                                                         | RAIL GRADE CROSSING IDENTIFIER must not equal 0000000. |
| 650P     | TRAFFIC CONTROL DEVICE equals 65 for any vehicle,                                                                                                          | RAIL GRADE CROSSING IDENTIFIER must not equal 0000000. |
| 651P     | RAIL GRADE CROSSING IDENTIFIER must equal BLANKS, 0000000, 9999999, or nnnnnnA; where n is a numeric character and A is an uppercase alphabetic character. | --                                                     |
| 750P     | RELATION TO JUNCTION(b) equals 07,                                                                                                                         | RAIL GRADE CROSSING IDENTIFIER must equal 0000000.     |

## C29 - Notification Time EMS - FARS Only

**FORMAT:** 4 numeric

**SAS NAME:** Accident.NOT\_HOUR, Accident.NOT\_MIN

**ELEMENT VALUES:**

| Codes     | Attributes                                      |
|-----------|-------------------------------------------------|
| 8888      | <a href="#">Not Applicable (Not Notified)</a>   |
| 0000-2359 | <a href="#">Valid Military Times</a>            |
| 0099-2399 | <a href="#">Known Hours but Unknown Minutes</a> |
| 9998      | <a href="#">Unknown if Notified</a>             |
| 9999      | <a href="#">Unknown EMS Notification Time</a>   |

**Definition:** NOTIFICATION TIME EMS is the time emergency medical service was notified.

**Remarks:** Every effort should be made to determine the NOTIFICATION TIME EMS, [ARRIVAL TIME EMS](#), and [EMS TIME AT HOSPITAL](#). *See tables below for [Example Coding Scenarios for Different EMS Times](#).*

*See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.*

Code the official EMS times in military times as received. **Do not alter the times because of discrepancies with the [CRASH TIME](#).** Code Notification Time of the first EMS unit to arrive on the scene.

All EMS time formats are in hours and minutes. If you receive an EMS time that includes the seconds' position, truncate to the reported minutes. Example: 10:51:35 would be 10:51.

If the day of the crash and the day of EMS Notification have different dates, then be sure to use the [018 \(Date of Crash and Date of EMS Notification Were Not the Same Day\)](#) in [RELATED FACTORS-CRASH LEVEL](#). Code NOTIFICATION TIME EMS and [ARRIVAL TIME EMS](#) no matter how much time has elapsed since the [CRASH TIME](#).

### 8888 (Not Applicable [Not Notified])

Enter this code only if EMS was never notified as part of an emergency transport.

- If it is known that EMS transport was called for non-emergency transport purposes (e.g., to transport a body to the morgue) then use this code.
- DO NOT use this code if the EMS was officially canceled. Cancellation is coded under [ARRIVAL TIME EMS](#) and [EMS TIME AT HOSPITAL](#).
- If the EMS was notified then canceled, code the actual notification time and [9997 \(Officially Canceled\)](#) under [ARRIVAL TIME EMS](#) and [EMS TIME AT HOSPITAL](#).

**0000 - 2359 (Valid Military Times), 0099 - 2399 (Known Hours but Unknown Minutes)**

Code Notification Time of the first EMS unit to arrive on the scene. If unknown minutes, code the actual hour and “99” for the minutes. Code midnight as “0000.” One minute after midnight is coded “0001.” See remarks “How to Code Midnight” under [CRASH TIME](#).

**9998 (Unknown if Notified)**

Enter this attribute if you cannot determine whether any EMS was ever notified or not.

**9999 (Unknown EMS Notification Time)**

Enter this attribute if EMS was notified but the time of notification is unknown.

Helicopters that transport victims to treatment facilities are coded as EMS units, but not police who may be trained to render emergency aid. This guidance is not meant to exclude helicopters that are used to transport victims for treatment that may be owned by police departments.

**Example Coding Scenarios for Different EMS Times**

**Scenario 1: Same EMS unit is first on scene and also transports the most severely injured person, known times for all three elements**

| <i>First on Scene</i>                | <i>Transported most Severely Injured Person</i> | <i>Notification Time EMS</i>            | <i>Arrival Time EMS</i>                 | <i>EMS Time at Hospital</i>             |
|--------------------------------------|-------------------------------------------------|-----------------------------------------|-----------------------------------------|-----------------------------------------|
| <i>EMS Air with Known times</i>      | <i>EMS Air with known times</i>                 | <i>Code known time for EMS Air</i>      | <i>Code known time for EMS Air</i>      | <i>Code known time for EMS Air</i>      |
| <i>EMS Ground with Known times</i>   | <i>EMS Ground with Known times</i>              | <i>Code known time for EMS Ground</i>   | <i>Code known time for EMS Ground</i>   | <i>Code known time for EMS Ground</i>   |
| <i>EMS Unk Type with Known times</i> | <i>EMS Unk Type with Known times</i>            | <i>Code known time for EMS Unk Type</i> | <i>Code known time for EMS Unk Type</i> | <i>Code known time for EMS Unk Type</i> |

**Scenario 2: Same EMS unit is first on scene and also transports the most severely injured person, unknown times for all three elements**

| <i>First on Scene</i>                  | <i>Transported most Severely Injured Person</i> | <i>Notification Time EMS</i>                | <i>Arrival Time EMS</i>                      | <i>EMS Time at Hospital</i>                     |
|----------------------------------------|-------------------------------------------------|---------------------------------------------|----------------------------------------------|-------------------------------------------------|

### C30 - Arrival Time EMS - FARS Only

**FORMAT:** 4 numeric

**SAS NAME:** Accident.ARR\_HOUR, Accident.ARR\_MIN

**ELEMENT VALUES:**

| Codes     | Attributes                                      |
|-----------|-------------------------------------------------|
| 8888      | <a href="#">Not Applicable (Not Notified)</a>   |
| 0000-2359 | <a href="#">Valid Military Times</a>            |
| 0099-2399 | <a href="#">Known Hours but Unknown Minutes</a> |
| 9997      | <a href="#">Officially Canceled</a>             |
| 9998      | <a href="#">Unknown if Arrived</a>              |
| 9999      | <a href="#">Unknown EMS Scene Arrival Time</a>  |

**Definition:** ARRIVAL TIME EMS is the time emergency medical service arrived on the crash scene.

**Remarks:** This excludes any transport by anyone other than EMS. (law enforcement, POV, etc.). Every effort should be made to determine the [NOTIFICATION TIME EMS](#), ARRIVAL TIME EMS, and [EMS TIME AT HOSPITAL](#). *See tables under NOTIFICATION TIME EMS for Example Coding Scenarios for Different EMS Times.* Code the official EMS times in military times as received. Code the arrival time of the first EMS unit to arrive on the scene. **Do not alter the times because of discrepancies with the [CRASH TIME](#).**

*See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.*

All EMS time formats are in hours and minutes. If you receive an EMS time that includes the seconds' position, truncate to the reported minutes. Example: 10:51:35 would be 10:51.

Code [NOTIFICATION TIME EMS](#) and ARRIVAL TIME EMS no matter how much time has elapsed since the [CRASH TIME](#).

#### **8888 (Not Applicable [Not Notified])**

Enter this attribute only if EMS was never notified. DO NOT use this code if the EMS was notified then canceled.

#### **0000 - 2359 (Valid Military Times), 0099 - 2399 (Known Hours but Unknown Minutes)**

Code the arrival time of the first EMS unit to arrive on the scene. If unknown minutes, code the actual hour and "99" for the minutes. Code midnight as "0000." One minute after midnight is coded "0001." See remarks "How to Code Midnight" under [CRASH TIME](#).

#### **9997 (Officially Canceled)**

Enter this attribute if EMS was officially canceled.

**9998 (Unknown if Arrived)**

Enter this attribute if there is no indication of official cancellation, but there is uncertainty or doubt that EMS ever arrived on the scene or not.

**9999 (Unknown EMS Scene Arrival Time)**

Enter this code if EMS did arrive on scene, but the time of arrival is unknown.

**Consistency Checks ([See Section 400](#)):**

### C31 - EMS Time at Hospital - FARS Only

**FORMAT:** 4 numeric

**SAS NAME:** Accident.HOSP\_HR, Accident.HOSP\_MN

**ELEMENT VALUES:**

| Codes     | Attributes                                        |
|-----------|---------------------------------------------------|
| 8888      | <a href="#">Not Applicable (Not Transported)</a>  |
| 0000-2359 | <a href="#">Valid Military Times</a>              |
| 0099-2399 | <a href="#">Known Hours but Unknown Minutes</a>   |
| 9996      | <a href="#">Terminated Transport</a>              |
| 9997      | <a href="#">Officially Canceled</a>               |
| 9998      | <a href="#">Unknown if Transported</a>            |
| 9999      | <a href="#">Unknown EMS Hospital Arrival Time</a> |

**Definition:** EMS TIME AT HOSPITAL is the time emergency medical service arrived at the treatment facility (hospital, clinic, trauma center, etc.) to which it was transporting victims of the crash.

**Remarks:** This excludes any transport by anyone other than EMS (law enforcement, POV, etc.). Every effort should be made to determine the [NOTIFICATION TIME EMS](#), [ARRIVAL TIME EMS](#), and EMS TIME AT HOSPITAL. *See tables under NOTIFICATION TIME EMS for Example Coding Scenarios for Different EMS Times.*

*See the [Coding Guide: TIME: Crash Times, EMS Times, Death Times](#) for helpful information.*

Code the official EMS times in military times as received. Code the EMS time at hospital of the unit transporting the most severely injured victim. The most severely injured victim includes (and usually is) the victim who dies en route to the treatment facility or later, but not the one who dies on-scene. **Do not alter the times because of discrepancies with the [CRASH TIME](#).**

All EMS time formats are in hours and minutes. If you receive an EMS time that includes the seconds' position, truncate to the reported minutes. Example: 10:51:35 would be 10:51.

Questions arise when there is more than one EMS unit or when there is more than one injured person. Code EMS TIME AT HOSPITAL according to the following guidelines:

#### **8888 (Not Applicable [Not Transported])**

Use this attribute if all the injuries are on-scene fatalities (no one is transported for treatment.) Also use this attribute if there are live victims, but no one is transported to a treatment facility by EMS.

**0000 - 2359 (Valid Military Time), 0099 - 2399 (Known Hours but Unknown Minutes)**

Code the EMS time at hospital of the unit transporting the most severely injured victim. The most severely injured victim includes (and usually is) the victim who dies en route to the treatment facility or later, but not the one who dies on-scene.

If unknown minutes, code the actual hour and “99” for the minutes. Code midnight as “0000.” One minute after midnight is coded “0001.” See remarks “How to Code Midnight” under [CRASH TIME](#).

**9996 (Terminated Transport)**

Enter this attribute if there is indication that EMS was notified, arrived at the scene but while in transit terminated the trip to hospital because the person died en route. This attribute should not be used when there is a hospital arrival time available for a person dead on arrival at the hospital.

**9997 (Officially Canceled)**

Enter this attribute if EMS was officially canceled before on scene.

**9998 (Unknown if Transported)**

Enter this attribute if there is no indication of official cancellation, but there is uncertainty or doubt that any victims were transported for treatment or not.

**9999 (Unknown EMS Hospital Arrival Time)**

Enter this attribute if EMS transported victims for treatment, but the time of arrival at the hospital or treatment facility is unknown.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                                                  | <b>THEN</b>                                                                                |
|-----------------|------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| A550            | ARRIVAL TIME EMS is not 8888, 9997, 9998, or 9999, and EMS TIME AT HOSPITAL is not 8888, 9997, 9998, 9999, | EMS TIME AT HOSPITAL should not be more than 60 minutes later than ARRIVAL TIME EMS.       |
| A551            | EMS TIME AT HOSPITAL equals 8888, 9997, 9998,                                                              | TRANSPORTED TO FIRST MEDICAL FACILITY BY should not equal 1, 3, 5 for any person.          |
| A560            | NOTIFICATION TIME EMS is not 8888, 9998, or 9999, and EMS TIME AT HOSPITAL is not 8888, 9997, 9998, 9999,  | EMS TIME AT HOSPITAL should not be more than 180 minutes later than NOTIFICATION TIME EMS. |

**\* FARS ONLY ATTRIBUTES**

**Definition:** This element identifies factors related to the crash expressed in the case material.

**Remarks:** Code information provided in the case material.

**For attributes 001-007**, if the officer states “the witness said,” these should **NOT** be coded. Care must be used in coding these attributes. The police crash report should state that the environmental condition was a factor or existed at this location; cannot be inferred.

**Attributes 012-031 - SPECIAL CIRCUMSTANCES**, are exceptions to the prior remarks. These are codes for unusual factors that occurred during the crash. If you can determine that any of these factors did happen, then these codes should be used.

This element can be coded in conjunction with other elements even if similar information is identified. For example, if a traffic control is temporarily down, it can be coded under both [DEVICE FUNCTIONING](#) and RELATED FACTORS-CRASH LEVEL [001 \(Inadequate Warning of Exits, Lanes Narrowing, Traffic Controls, etc.\)](#).

**000 (None)** is used when no applicable related factors are noted in the case material.

**\*001 (Inadequate Warning of Exits, Lanes Narrowing, Traffic Controls, etc.)** is used when the case material identifies that there was inadequate warning provided to motorists associated with the trafficway. **Do** not use this attribute in situations that would include construction sites or work areas (see [003 \(Other Maintenance or Construction-Created Condition\)](#)).

**Examples include:**

- Inadequate warning due to obscured signs.
- Inadequate warning because signs were temporarily down.
- Lack of necessary signage (e.g., merge or diverge warning, downhill grade).

**\*002 (Shoulder Design or Condition)** is used when the case material identifies problem conditions pertaining to the actual design or condition of the **shoulder**.

**Examples include:**

- Soft or collapsing shoulders.
- Inadequate shoulder width.
- Shoulder is at a different level from the roadway (e.g., drop-off, lifted, not flat).

**003 (Other Maintenance or Construction-Created Condition)** is used when the case material identifies problem conditions pertaining to “inadequate maintenance” of the roadway (e.g., potholes, ruts in roadway) or conditions cited by the officer that are related to construction activity (addition of barricades, change in traffic patterns, merging lanes, etc.).

**\*004 (No or Obscured Pavement Marking)** is used when the case material identifies problem conditions pertaining to any pavement marking *situations*.

**Examples include:**

- New asphalt that has covered old pavement markings.
- Areas where pavement marking has worn off.
- The case material mention ice/snow/mud was obscuring the pavement markings.

**005 (Surface Under Water)** is used when the case material identifies that the roadway surface is under water beyond normal accumulation (i.e., depth of water). Also use this attribute when the case material mention situations where the roadway is permanently under water (i.e., *fords*).

**\*006 (Inadequate Construction or Poor Design of Roadway, Bridge, etc.)** is used when the case material identifies problems with the roadway design. This attribute does not include shoulder-related situations, pavement marking situations, or situations with inadequate warnings (see attributes [001 \(Inadequate Warning of Exits, Lanes Narrowing, Traffic Controls, etc.\)](#), [002 \(Shoulder Design or Condition\)](#), and [004 \(No or Obscured Pavement Marking\)](#)).

**Examples include:**

- Original design of the trafficway (i.e., roadway bridges, medians, guardrails, traffic barriers) is poor.
- Blind intersections due to highway design, not due to visual obstructions (i.e., shrubbery) etc.
- Improper banking.
- Lack of a lane for merging.
- Inadequate road surface (dirt, gravel surfaces, etc.). However, this must not be inferred. It must be explicitly stated in the police report as a “factor.”

**007 (Surface Washed Out [caved-in, road slippage])** is used when the case material identifies the roadway was previously washed out, caved-in, or had slipped due to prior events associated with the environment (flooding, earthquakes, etc.).

**012 (Distracted Driver of a Non-Contact Vehicle)** is used for situations where the investigating officer indicates that the driver of a non-contact vehicle (“phantom vehicle”) was distracted.

**013 (Aggressive Driving/Road Rage by Non-Contact Vehicle Driver)** is only used for situations where the investigating officer indicates that a non-contact vehicle (“phantom vehicle”) was being operated aggressively. The officer must use the term “Aggressive” *or* “**Road Rage**” in describing a driver’s behavior. This can be indicated in the case material under related/contributing factors/circumstances or in the narrative. *For* contact vehicles, see RELATED FACTORS - DRIVER LEVEL [008 \(Aggressive Driving/Road Rage\)](#).

**014 (Motor Vehicle Struck by Falling Cargo, or Something That Came Loose from, or Something that was Set in Motion by a Vehicle)** is used when the case material identifies that a vehicle became a contact vehicle in the crash as a result of being struck by cargo or objects that fell from another vehicle or by something that was set in motion by another vehicle. The term

“set in motion” generally applies to non-fixed or fixed objects struck and propelled by a vehicle (including pedestrians or parked vehicles). This can also include a circumstance where one vehicle overrides another and then directs or controls the overridden vehicle’s movement.

**Examples include:**

- Cargo falls from a truck (in-transport) and lands on another motor vehicle in-transport or a parked vehicle.
- A car runs off the roadway at an intersection, hits a stop sign and propels the stop sign into a vehicle traveling on the intersecting roadway.
- A motorcycle rider overturns in a curve, the rider is separated from the vehicle and the rider slides across the centerline into a vehicle traveling in the opposing lanes.
- A tractor trailer overrides a passenger car and with the car still pinned under the truck, the combined vehicles continue on to contact other objects.

**015 (Non-Occupant Struck by Falling Cargo, or Something That Came Loose from, or Something that was Set in Motion by a Vehicle)** is used when the case material identifies that a non-occupant (e.g., pedestrian, bicyclist, person on personal conveyance) was struck by cargo or objects that fell from a motor vehicle or by something that was set in motion by a motor vehicle. The term “set in motion” generally applies to non-fixed or fixed objects struck and propelled by a vehicle (including pedestrians or parked vehicles).

**Examples include:**

- Cargo falls from a truck (in-transport) and lands on a bicyclist on the shoulder.
- A car runs off the roadway at an intersection, hits a stop sign, and propels the stop sign into a skateboarder waiting to cross the intersection.
- A car strikes a deer in the roadway and propels the deer into a person jogging on the sidewalk.

**016 (Non-Occupant Struck Vehicle)** is used when the case material identifies that a non-occupant (e.g., pedestrian, bicyclist, person on personal conveyance) “struck” or “ran into” a motor vehicle (usually the side or back of the vehicle). **This does not include non-occupants who are struck in the vehicle’s path of travel.**

**Examples include:**

- A bicyclist runs into the mirror of a parked car and falls into the path of a motor vehicle in-transport.
- A runner collides with the side of a vehicle that comes to a sudden stop and the runner is subsequently struck by another vehicle.

**017 (Vehicle Set in Motion by Non-Driver)** is used when the case material identifies the crash involved a passenger's action.

**Examples include:**

- Passenger shifting gears on the vehicle.
- Passenger hitting the accelerator.
- Passenger turning the ignition key or hitting the ignition button.

**NOTE:** This attribute is different from RELATED FACTORS-PERSON LEVEL [005 \(Interfering with the Driver\)](#).

**\*018 (Date of Crash and Date of EMS Notification Were Not the Same Day)** is used when the crash victim(s) is not discovered immediately or when the effects of the crash are not immediately known.

**020 (Police Pursuit Involved)** is used when the case material identifies a police pursuit had been initiated by the police and was active at the time of the crash. This attribute is also used when a pursuit had been initiated and terminated, but the pursuit action is still related to the crash. This applies for both air and ground pursuing vehicles. To identify the individual(s) involved in the pursuit, please see [RELATED FACTORS-DRIVER LEVEL](#) for [037 \(Police Pursuing this Driver or Police Officer in Pursuit\)](#).

**Definition of Police Pursuit:** A pursuit is an event that is initiated when a law enforcement officer, operating an authorized emergency vehicle, gives notice to stop (either through the use of visual or audible emergency signals or a combination of emergency devices) to a motorist who the officer is attempting to apprehend, and that motorist fails to comply with the signal by either maintaining his/her speed, increasing speed, or taking other evasive action to elude the officer's continued attempts to stop the motorist. A pursuit is terminated when the motorist stops, or when the attempt to apprehend is discontinued by the officer or at the direction of a competent authority.

**021 (Within Designated School Zone)** is used when the case material identifies the crash occurred in an area signed or marked as a "School Zone." This may or may not be [SCHOOL BUS RELATED](#). "School Zones" are zones near or at a school that exist during months and hours when zone signing is in effect.

**\*022 (Speed Limit is a Statutory Limit as Recorded or was Determined as This State's "Basic Rule")** is used when the case material identifies there is no posted speed limit but the State law sets the maximum speed limit on a local road or street.

**023 (Indication of a Stalled/Disabled Vehicle)** is used when the case material identifies that a stalled or mechanically disabled vehicle was somehow related to the crash. It includes both contact and non-contact vehicles that are stalled/disabled for mechanical reasons not due to crash-related damage.

**Examples include:**

- A pedestrian is struck when walking from their stalled vehicle.
- A vehicle is stalled in the travel lanes causing another vehicle to lose control and crash.

**024 (Unstabilized Situation Began and All Harmful Events Occurred Off the Roadway)** is used when the case material identifies the unstabilized situation began within the trafficway but off the roadway and all harmful events occurred off the roadway.

**Examples include:**

- A vehicle stopped on the roadside begins to accelerate to re-enter the roadway and runs into a ditch and overturns.
- An ATV is driving along the roadside and strikes a tree stump.
- A vehicle strikes a pedestrian while driving down the road shoulder.

**028 (Regular Congestion)** is used when the case material identifies the crash occurred in or related to an area of trafficway where there was congestion due to **long term** heavy traffic. **For example**, during **regular** rush hour **traffic or due to ongoing, long-term construction projects**.

**NOTE:** A Secondary Crash occurs when this crash was within a traffic incident scene or within a traffic queue in either direction resulting from a [Recent Previous Crash](#), a [Backup Due to a Prior Crash](#), or a [Prior Non-Recurring Incident](#). A traffic incident scene is the scene of any unplanned traffic event that adversely effects normal traffic operations. Examples include, but are not limited to, traffic crashes, disabled vehicles, traffic backups, or spilled cargo.

**019 (Recent Previous Crash Scene Nearby)** is used when the case material identifies that a previous crash somehow influenced or contributed to the occurrence of this crash.

**Examples:**

- A change in the traffic patterns.
- An obstruction on the roadway.
- A reduction in traffic speed.
- Occupants and/or vehicles on the roadway.
- Possible recent traffic crash scene.

**027 (Backup Due to Prior Crash)** is used when the case material identifies there was an accumulation of traffic caused by vehicles slowing or stopping due to traffic flow being impacted by a prior crash. The distance from the prior crash does not matter, only the relevance to this crash.

**026 (Prior Non-Recurring Incident)** is used when the case material identifies that the crash occurred in or related to an unusual and unplanned event.

**Examples:**

- A tractor trailer transporting a trailer designated as a Wide Load.
- Debris in the roadway causing a backup.
- Traffic going to or coming from a funeral procession, sporting event, parade, or traffic signal outage.

**025 (Toll Booth/Plaza Related)** is used when the case material identifies that the crash occurred at or in the vicinity of a toll booth (manned or unmanned) or a toll plaza. These are crashes that occur in the upstream approach to the toll booth/plaza area and continues as the approach area (where the toll road begins to widen) leading up to the toll booths and in the departure area where the road begins to narrow leading back to the normal number of lanes comprising the toll road downstream departure area. (See [Figure 12.](#))

**030 (Obstructed Crosswalks)** is used when case material indicate that crosswalks were in the vicinity of the crash but were not available because they were somehow obstructed. For example, due to construction, people, stopped motor vehicles, or other objects preventing their use.

**031 (Related to a Bus Stop)** is used when the case material indicate the crash was related to the use of a location set aside for, or customarily used for, boarding and disembarking passengers onto or from a bus of any kind (e.g., pedestrian collisions involving vehicles maneuvering around a bus stopped for boarding or disembarking passengers, pedestrians walking to a bus stop, or pedestrians running across traffic lanes to a bus stop).

**999 (Reported as Unknown)** is used when the circumstances surrounding the crash are unknown and reported as “Unknown” by the investigating *officer*.

### C33 - Interstate Highway - CRSS Only

**FORMAT:** 1 numeric

**SAS NAME:** Accident.INT\_HWY

**ELEMENT VALUES:**

| Codes | Attributes              |
|-------|-------------------------|
| 0     | <a href="#">No</a>      |
| 1     | <a href="#">Yes</a>     |
| 9     | <a href="#">Unknown</a> |

**Definition:** This element identifies whether or not the crash occurred on an interstate highway. Interstate highway is a Federal Highway Administration classification.

**Remarks:** The Interstate Highway System includes those trafficways that are within the national system for interstate transport and defense purposes. Interstates typically have limited access and multiple lanes of travel.

Crashes that occur on ramps leading to or away from an Interstate should be coded [1 \(Yes\)](#).

**0 (No)** is used when the police crash report indicates that the crash occurred on any of the following: US Highway, State Highway, County Road, Township Road, or Municipal Road.

**1 (Yes)** is used when the police crash report indicates the crash occurred on an interstate highway. Some police crash reports use a specific block to indicate interstate. Interstate can also be identified by the prefix “I” used in the roadway name.

**9 (Unknown)** is used when it cannot be determined whether the trafficway where the crash occurred was an interstate or not.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                        | THEN                                                                                                          |

| 9     | <a href="#">Stratum 9</a>  |
| 10    | <a href="#">Stratum 10</a> |

**Definition:** The CRSS stratum applicable to this police crash report.

**Remarks:** Only motor vehicle traffic crashes are included in the CRSS. See the current **CRSS Sampling Manual**, for the definition of a CRSS crash.

#### CRSS Strata Definitions

| Stratum # | Definition                                                                                                                                                                                                |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stratum 2 | Crashes involving at least one injured (A, B, C, or ISU*) or Killed (K) person who was not in a motor vehicle (i.e., non-motorist).                                                                       |
| Stratum 3 | Crashes not qualifying for Stratum 2 involving at least one injured (A, B, C, or ISU*) or Killed (K) occupant of a motorcycle or moped.                                                                   |
| Stratum 4 | Crashes not qualifying for Strata 2 or 3 involving at least one occupant of a late model year (LMY) passenger vehicle who was injured with a Suspected Serious Injury (A) or Killed (K).                  |
| Stratum 5 | Crashes not qualifying for Strata 2, 3, or 4 involving at least one occupant of a non-late model year (NLMY) passenger vehicle who was injured with a Suspected Serious Injury (A) or Killed (K).         |
| Stratum 6 | Crashes not qualifying for Strata 2, 3, 4, or 5 involving at least one occupant of a late model year (LMY) passenger vehicle who was injured (B, C, or ISU*).                                             |
| Stratum 7 | Crashes not qualifying for Strata 2, 3, 4, 5, or 6 involving at least one medium or heavy truck or bus (includes school bus, transit bus, and motor coach) with GVWR equal to or greater than 10,001 lbs. |
| Stratum 8 | Crashes not qualifying for Strata 2, 3, 4, 5, 6, or 7 involving at least one occupant of a non-late model year (NLMY) passenger vehicle who was injured (B, C, or ISU*).                                  |

| Stratum #  | Definition                                                                                                                                                                                                              |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stratum 9  | Crashes not qualifying for Strata 2, 3, 4, 5, 6, 7, or 8 involving at least one late model year (LMY) passenger vehicle <u>AND</u> no one in the in-transport vehicle(s) were injured (A, B, C, or ISU*) or Killed (K). |
| Stratum 10 | Crashes not qualifying for Strata 2, 3, 4, 5, 6, 7, 8, or 9.                                                                                                                                                            |

**\*ISU = Injured, Severity Unknown**

### **Important Notes:**

- A. In stratum 2, non-motorist does not include occupants of a motor vehicle not in-transport.
- B. Only the contact motor vehicle(s) that are in-transport are considered in determining the applicable stratum. Therefore, injuries sustained by occupants of motor vehicles that are not in-transport are not considered for stratification.
- C. A motor vehicle with no occupants that is in-transport IS considered in the stratification.
- D. Late model year (LMY): the vehicle model year is equal to the crash year, the following year, or 4 prior years.
- E. Non-late model year (NLMY): the vehicle model year is older than 4 prior years or the model year of the vehicle is unknown.

### **Unstabilized Situations**

As defined by [ANSI D-16 8th edition](#), Section 2.4.4, “An unstabilized situation is a set of events not under human control. It originates when control is lost and terminates when control is regained or, in the absence of people who are able to regain control, when all people and property are at rest.” “Property” can refer to the involved vehicles, separated components of the vehicles, cargo, or objects set in motion. The duration of an unstabilized situation establishes the beginning and end of an individual crash.

At times, one police crash report may contain more than one crash. This may happen when events constituting a crash have stabilized and units involved in the first sequence are subsequently involved in another crash sequence and recorded on the same police crash report. If more than one crash is recorded on a police crash report, ALL of the crashes are to be listed and stratified separately. This includes CRSS, NTS, and those that are Out-of-Scope. ***If multiple crashes are not detected until the coding process, the crash that matches the stratum should be coded, as that is the anticipated crash selected by PARSE.*** In a multi-vehicle crash, if it cannot be determined conclusively that all people and property had come to rest at some point prior to the involvement of all vehicles listed on the police crash report, the events would be part of a single unstabilized situation and thus considered one crash.

### **Consistency Check (CRSS Only) ([See Section 400](#)):**

| Error ID | Error Message                                        |
|----------|------------------------------------------------------|
| 5AAP     | The Final STRATUM should equal the Original STRATUM. |

### **C35 - Police Jurisdiction - CRSS Only**

**FORMAT:** 3 numeric

**SAS NAME:** Accident.PJ

**ELEMENT VALUES:**

| <b>Codes</b> | <b>Attributes</b> |
|--------------|-------------------|
| 001-128      | Range             |

**Definition:** The number of the police jurisdiction from which the police crash report was originally sampled.

**Remarks:** This is the police jurisdiction from which the police crash report is selected. It is written at the top of the police crash report and is prefaced by the character “PJ.” The police jurisdiction may also be shown as the second of three numbers separated by -s. The first number in the set of three is the primary sampling unit, the second is the police jurisdiction, and the third is the police crash report number. The jurisdiction number written on the police crash report must match the number shown in the “CRSS Input Form” Police Crash Report/Jurisdiction field.

**Additional State Information**

**FORMAT:** Alphanumeric

**SAS NAME:** None

**ELEMENT VALUES:**

- Blanks
- Any Alphanumeric Characters

**Remarks:** This space is reserved for each individual State's use. Suggested uses depend on potential needs of the State. This space may contain:

1. Police crash report number.
2. Additional crash location information.

If HPMS number is available, it may be inserted here.

### V3 - Vehicle Number - Vehicle Level

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.VEH\_NO, Parkwork.VEH\_NO

**ELEMENT VALUES:**

| Codes   | Attributes      |
|---------|-----------------|
| 001-999 | Assigned Number |

**Definition:** This element identifies the number assigned to this vehicle in the crash.

**Remarks:** Each motor vehicle in a crash must be assigned a unique number. The numbers assigned to vehicles must be consecutive, starting with “001” with no missing numbers.

Motor vehicles are assigned the police crash report’s vehicle number unless a number is skipped because of a non-contact vehicle included on the police crash report with a vehicle number or a non-motorist included with a unit number.

**Consistency Checks** ([See Section 400](#)):

| Error ID | IF                                                                                                                                                                                      | THEN                                                                                                                                  |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| 060P     | VEHICLE NUMBER OF MOTOR VEHICLE STRIKING NON-MOTORIST is not equal to 000,                                                                                                              | the VEHICLE NUMBER OF MOTOR VEHICLE STRIKING NON-MOTORIST must equal some VEHICLE NUMBER in the case, and the UNIT TYPE must equal 1. |
| CSI5     | VEHICLE NUMBER at the Person Level is greater than 000,                                                                                                                                 | VEHICLE NUMBER at the Person Level must equal a VEHICLE NUMBER at the Vehicle Level.                                                  |
| CSI6     | For each VEHICLE NUMBER, PERSON NUMBERS must be consecutive, beginning with 001 and with no gaps.                                                                                       | --                                                                                                                                    |
| PBA0     | PEDESTRIAN/ BIKE TYPING - CRASH TYPE - BICYCLE equals 111, 211, 212, and VEHICLE NUMBER - VEHICLE LEVEL equals VEHICLE NUMBER OF MOTOR VEHICLE STRIKING NON-MOTORIST,                   | PRE-EVENT MOVEMENT (PRIOR TO RECOGNITION OF CRITICAL EVENT) should equal 11.                                                          |
| PBA1     | PEDESTRIAN/ BIKE TYPING - CRASH TYPE - BICYCLE equals 112, 151, 213, 214, 217, or 218, and VEHICLE NUMBER - VEHICLE LEVEL equals VEHICLE NUMBER OF MOTOR VEHICLE STRIKING NON-MOTORIST, | PRE-EVENT MOVEMENT (PRIOR TO RECOGNITION OF CRITICAL EVENT) should equal 10.                                                          |

## V4 - Number of Occupants

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.NUMOCCS, Parkwork.PNUMOCCS

**ELEMENT VALUES:**

| Codes | Attributes                                     |
|-------|------------------------------------------------|
| 00    | <a href="#">None</a>                           |
| 01-98 | <a href="#">Actual Value* [if Total Known]</a> |
| 99    | <a href="#">Unknown</a>                        |

**Definition:** This element identifies the number of occupants in each vehicle.

**Remarks:** This data element must be coded for each motor vehicle involved in the crash. Code the total number of occupants (**injured and uninjured**) in this motor vehicle. In bus crashes, the total number of occupants, including the driver, must be entered.

**00 (None)** is used when this motor vehicle is unoccupied.

**01-98 (Actual Value\* [If Total Known])** is used when the number of occupants in the vehicle is known. [Person Level \(MV Occupant\) forms](#) should be submitted for all known occupants (even if there is no information in the case material).

**Buses are an exception.** For buses ([NCSA BODY TYPES 50-52, 55, 58, 59](#)), the total number of occupants, including the driver, should be recorded, but [Person Level \(MV Occupant\) forms](#) should only be submitted for occupants known to be injured and for the driver, whether the driver is known to be injured or not. **NOTE:** This does NOT apply to small van-based buses ([NCSA BODY TYPE 21](#)). Always submit a person level form for all occupants of van-based vehicles, including small van-based buses.

**99 (Unknown)** is used when the number of occupants for the motor vehicle is unknown. Unless evidence clearly establishes the number of occupants present, this code is used when this motor vehicle is a “hit-and-run” vehicle.

If the actual number of motor vehicle occupants is unknown, [Person Level \(MV Occupant\) forms](#) should be submitted for all known occupants (even if there is no information on the police crash report).

**Buses are an exception.** For buses ([NCSA BODY TYPES 50-52, 55, 58, 59](#)), if the total number of occupants is unknown, Person Level (MV Occupant) forms should be submitted for the driver (if there was one) and all occupants known to be injured. This does NOT apply to small van-based buses ([NCSA BODY TYPE 21](#)). If the total number of occupants is unknown for small van-based buses ([NCSA BODY TYPE 21](#)), always submit a person level form for all known occupants (even if there is no information in the case material).

Also use **99 (Unknown)** when the State reports information only on drivers and INJURED passengers and the total number of occupants is unknown.

\* Values greater than 30 are unlikely and will raise a “U” flag.

Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | THEN                                                                                        |

## V5 - Unit Type

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.UNITTYPE, Parkwork.PTYPE

**ELEMENT VALUES:**

| Codes | Attributes                                                                              |
|-------|-----------------------------------------------------------------------------------------|
| 1     | <a href="#">Motor Vehicle In-Transport (Inside or Outside the Trafficway)</a>           |
| 2     | <a href="#">Motor Vehicle Not In-Transport Within the Trafficway</a>                    |
| 3     | <a href="#">Motor Vehicle Not In-Transport Outside the Trafficway</a>                   |
| 4     | <a href="#">Working Motor Vehicle</a> (Highway Construction, Maintenance, Utility Only) |

**Definition:** This element identifies the type of unit that applies to this motor vehicle at the time it became an involved vehicle in the crash and was reported as a unit on the police crash report.

**Remarks: IMPORTANT:** Remember, you must have at least one Motor Vehicle In-Transport involved in the crash for this to be a reportable case. *If a Working Motor Vehicle is parked while performing its work (e.g., a bucket truck is parked on the shoulder while a worker is working on utility lines) use code [4 \(Working Motor Vehicle \[Highway Construction, Maintenance, Utility Only\]\)](#). If that same vehicle is not performing its work, then use code [2 \(Motor Vehicle Not In-Transport Within the Trafficway\)](#) or code [3 \(Motor Vehicle Not In-Transport Outside the Trafficway\)](#) depending upon the situation.*

**NOTE:** For UNIT TYPE attributes “2-4,” you must only submit selected elements on the Vehicle Level. The elements [JACKKNIFE](#), [TRAVEL SPEED](#), and [SEQUENCE OF EVENTS](#) are not coded. Also, all elements on the Driver level must be left blank, except [DRIVER PRESENCE](#) and [RELATED FACTORS-DRIVER LEVEL](#). RELATED FACTORS-DRIVER LEVEL must be coded **000**.

**1 (Motor Vehicle In-Transport [Inside or Outside the Trafficway])** is used to indicate that this is a motor vehicle in-transport. “In-Transport” means any part of the vehicle’s primary outline as defined by the four sides of the vehicle (excluding open doors or mirrors) or load, if any, is within the roadway (travel lanes) or the vehicle is in motion anywhere within or outside the trafficway boundaries.

### Examples:

1. Motor vehicle in traffic on the highway.
2. Motionless motor vehicle abandoned on the roadway travel lanes.
3. Motor vehicle on roadway stopped at traffic signal.
4. Motor vehicle driving or in motion on the shoulder, median, or roadside.
5. Motor vehicle driving down a private driveway.
6. Motor vehicle in motion, outside the trafficway boundaries (vehicle pulling up to a pump in a gas station, not within trafficway; vehicle in motion in a parking lot aisle; lawn

tractor driving in a field adjacent to the trafficway; ATV driving on a dirt track next to trafficway; etc.).

7. A tractor trailer with its load hanging over the roadway edge line.
8. A pickup truck on the shoulder with lumber extending into the travel lanes.

**2 (Motor Vehicle Not In-Transport Within the Trafficway)** is used to indicate that this is a motor vehicle **not** in-transport located **within** the trafficway boundaries when it became an involved unit. The trafficway boundaries are from property line to property line. If it can't be determined if a not in-transport, non-working motor vehicle is within or outside the trafficway, use code [3 \(Motor Vehicle Not In-Transport Outside the Trafficway\)](#).

**Examples:**

1. Motor vehicle parked in designated curbside parking lane.
2. Motor vehicle parked in designated curbside parking lane with an open door crossing into the travel lane.
3. Motor vehicle stopped completely on the shoulder, median, or roadside.

**3 (Motor Vehicle Not In-Transport Outside the Trafficway)** is used to indicate that this is a motor vehicle **not** in-transport located **outside** the trafficway boundaries when it became an involved unit by being struck by a motor vehicle in-transport. If it can't be determined if a not in-transport, non-working motor vehicle is within or outside the trafficway, use code **3 (Motor Vehicle Not In-Transport Outside the Trafficway)**.

**Examples:**

1. Motor vehicle parked in a private driveway, parking lot space, or other private property (outside the trafficway boundaries).
2. Any vehicle (not in motion) used for private construction occurring outside the trafficway boundaries.

**4 (Working Motor Vehicle [Highway Construction, Maintenance, Utility Only])** is used to indicate that this is a motor vehicle that was in the act of performing highway construction, maintenance, or utility work related to the trafficway when it became an involved unit. The vehicle should be known to be in the act of performing work. This "work" may be located within open or closed portions of the trafficway and motor vehicles performing these activities can be within or outside the trafficway boundaries. This code does not include private construction/maintenance vehicles, or vehicles such as garbage trucks, delivery trucks, taxis, emergency vehicles (except example #8 below), tow trucks, etc. **DO NOT evaluate this attribute on NCSA Body Type alone.**

**Examples:**

1. Asphalt/steam roller working in a highway construction zone paving the roadway or flattening dirt.
2. State highway maintenance crew painting lane lines on the road, mowing grass on the roadside or median, repairing potholes, removing debris from the roadway, etc.
3. Utility truck or a "cherry picker," performing maintenance on power lines along the roadway or maintaining a traffic signal.

4. A private excavating company contracted by the State digging the foundation for a new overpass.
5. A State, county, or privately-owned snowplow, plowing ice/snow as part of a highway maintenance activity.
6. Street sweeper sweeping the street.
7. A vehicle in a mobile work convoy displaying arrow boards or other signaling devices warning motorists of the work activity.
8. A law enforcement vehicle that is participating strictly in a stationary construction or mobile maintenance activity as a traffic slowing, control, signaling, or calming influence.

When not in the act of performing “work,” or it cannot be determined if the vehicle was in the act of performing “work,” and involved in the crash, these highway construction, maintenance, or utility vehicles can be:

1. In-Transport when traveling from one construction site to the next (UNIT TYPE [1 \(Motor Vehicle In-Transport \[Inside or Outside the Trafficway\]\)](#)).
2. Not In-Transport Within the Trafficway when stopped on the shoulder (UNIT TYPE [2 \(Motor Vehicle Not In-Transport Within the Trafficway\)](#)). Example: A dump truck is struck on the shoulder and it cannot be determined if it was in the act of performing “work.”
3. Not In-Transport Outside the Trafficway when parked and refueling at a depot (UNIT TYPE [3 \(Motor Vehicle Not In-Transport Outside the Trafficway\)](#)).
4. In-Transport Outside the Trafficway when relocating off the trafficway from a work activity area to another off-trafficway parking location.

**Consistency Checks [\(See Section 400\)](#):**

## V6 - Hit-and-Run

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.HIT\_RUN, Parkwork.PHIT\_RUN

### ELEMENT VALUES:

| Codes | Attributes          |
|-------|---------------------|
| 0     | <a href="#">No</a>  |
| 1     | <a href="#">Yes</a> |

**Definition:** This element refers to cases where a vehicle is a contact vehicle in the crash and does not stop to render aid (this can include drivers who flee the scene on foot).

**Remarks:** In many States, the investigating officer will note this in the narrative or check the appropriate box on the police crash report. In some cases, the driver can be cited for failing to render assistance. Review the case material carefully for references to hit-and-run or failure to render aid.

It does not matter whether the hit-and-run vehicle was striking or struck. The hit-and-run vehicle(s) is (are) the one(s) that “departed prior to investigation by the police,” or that vehicle that is “abandoned” at the scene when its occupant(s) fled from the area. If the police crash report indicates that the vehicle was involved in a collision that was investigated, but there is no information on that vehicle or the driver/owner because of departure prior to police arrival on-scene, then hit-and-run is indicated.

**0 (No)** is used if there is no reason to believe a hit-and-run occurred involving this vehicle or its driver. Example: If a vehicle is involved in a multi-vehicle collision and one of the other contact vehicles leaves the scene.

#### Examples include:

1. if occupants of a vehicle are taken or go directly from the scene to a medical treatment facility or physician. However, if doubt exists concerning the departure for treatment, assume hit-and-run.
2. a driver who leaves the scene but furnishes name, address, vehicle make, model, and model year such that it is recorded in the available information and the available information does not indicate hit-and-run.
3. vehicles that set an object in motion such that (a) the object is contacted before it stabilizes by another in-transport motor vehicle, and (b) the vehicle that set the object in motion leaves the scene without providing the pertinent information (compare with exception two above), and (c) the available information does not indicate hit-and-run.

**1 (Yes)** is used when it has been determined that this vehicle’s driver left the scene with or without their vehicle.

A hit-and-run occurred when this vehicle's driver left the scene after:

- striking a pedestrian or other type of non-motorist.
- striking a parked/stopped off roadway motor vehicle (with or without occupants).
- being struck while parked or in-transport.
- striking or being struck by an in-transport motor vehicle.

If HIT-AND-RUN is **1 (Yes)**, [Driver](#) and [Person Level \(MV Occupant\)](#) forms must be submitted for the driver and any known passengers of this vehicle involved in the crash regardless of the fact that it was a hit-and-run. When the presence of a hit-and-run vehicle is indicated and the available information does not provide the number of occupants, [NUMBER OF OCCUPANTS](#) must equal **99 (Unknown)**.

**Consistency Checks** [\(See Section 400\)](#):

| 30    | Montana                        | 97    | Other Foreign Country*                                 |
| 31    | Nebraska                       | 98    | <a href="#">Other Registration</a>                     |
| 32    | Nevada                         | 99    | <a href="#">Reported as Unknown</a>                    |
| 33    | New Hampshire                  |       |                                                        |

\*This value is an unlikely occurrence and will raise an error flag.

**Definition:** This element identifies the State in which this vehicle was registered.

**Remarks:** For a vehicle with an expired registration, code the State where the vehicle was registered at the time of expiration.

**91 (Not Reported)** *Check to see if [92 \(No Registration\)](#), [00 \(Not Applicable\)](#), or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **91 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

For combination vehicles, use the registration State of the power unit only.

**00 (Not Applicable)** is used for vehicles that are not required to be registered. This is State-specific based on State vehicle registration requirements.

Use State codes for all State-registered vehicles, including State government vehicles. However, if your State does not register government-owned vehicles, use **00 (Not Applicable)**.

**92 (No Registration)** applies to vehicles that are required by State law to be registered and are NOT registered.

**93 (Multiple State Registration)** is used for commercial vehicles that are registered in more than one State under a valid reciprocal agreement (such as the International Registration Plan (IRP)).

**94 (US Government Tags)** is used to indicate the license was issued by the U.S. Government, such as military or State Department Foreign Service.

If a police crash report data element is coded with the attribute "Other" but the officer does not specify what this refers to:

1. Code [98 \(Other Registration\)](#) if the police crash report attribute choices can be matched to or include all the attributes in FARS/CRSS.
2. Code [91 \(Not Reported\)](#) if the police crash report choices cannot be matched to or include all the attributes in FARS/CRSS.

**98 (Other Registration)** is used for other registrations that are not identified by their own attribute (e.g., Native American Indian Nations, Other U.S. Territories, or U.S. owned outlying areas such as Northern Marianas Islands, Wake Islands, etc.).

**99 (Reported as Unknown)** is used when the registration information for a vehicle cannot be identified. Example unidentified hit-and-run vehicle’s registration reported as “Unknown” by police.

**Consistency Checks [\(See Section 400\)](#):**

## V8 - Registered Vehicle Owner - FARS Only

**FORMAT:** 1 numeric

**SAS Name:** Vehicle.OWNER, Parkwork.POWNER

### ELEMENT VALUES:

| Codes | Attributes                                                                                  |
|-------|---------------------------------------------------------------------------------------------|
| 0     | <a href="#">Not Applicable, Vehicle Not Registered</a>                                      |
| 1     | Driver (in this crash) Was Registered Owner                                                 |
| 2     | <a href="#">Driver (in this crash) Not Registered Owner (other private owner listed)</a>    |
| 3     | <a href="#">Vehicle Registered as <b>Commercial</b>/Business/Company/Government Vehicle</a> |
| 4     | <a href="#">Vehicle Registered as Rental Vehicle</a>                                        |
| 5     | <a href="#">Vehicle Was Stolen (reported by police)</a>                                     |
| 6     | <a href="#">Driverless/Motor Vehicle Parked/Stopped Off Roadway</a>                         |
| 9     | <a href="#">Unknown</a>                                                                     |

**Definition:** This element is used to determine the type of registered owner of the vehicle.

**Remarks:** The type of ownership, “loan vs. lease,” does not change the coding. An individual or company should be the Registered Vehicle Owner, regardless of the bank holding the loan or lease. Banks and leasing companies should be the Registered Vehicle Owner for their own fleets only. *In instances when both an individual and a Commercial/Business/Company/Government are listed as the REGISTERED VEHICLE OWNER, use code [3 \(Vehicle Registered as Commercial/Business/Company/Government Vehicle\)](#). For example, the driver in a crash owns a truck tractor and uses it in his trucking business.*

*In the case of a conflict between the two, Vehicle Registration data takes precedence over police reported information. If you are unable to access the vehicle registration data, use what is on the police report.*

**0 (Not Applicable, Vehicle Not Registered)** applies to vehicles that are not registered, both not required to be registered (state specific based on State vehicle registration requirements) and illegally not registered. (See [5 \(Vehicle Was Stolen \[reported by police\]\)](#) for stolen vehicles.) For plated Business/Company/Government Vehicles that are exempt from normal registration see [3 \(Vehicle Registered as Commercial/Business/ Company/ Government Vehicle\)](#).

**2 (Driver (in this crash) Not Registered Owner [other private owner listed])** is used for private owners other than the driver. Also, this includes when the driver is a spouse of the owner but is not a co-owner.

**3 (Vehicle Registered as Commercial/Business/Company/Government Vehicle)** is used for vehicles that are registered in a **Commercial**, Business, or Company name, or as a local, county, State, or Federal Government Vehicle. Use this attribute even if the Government vehicle is exempt from normal registration. Example: city owned police cruisers.

**4 (Vehicle Registered as Rental Vehicle)** applies for rental vehicles, such as: Hertz, Ryder trucks, etc.

**5 (Vehicle Was Stolen [reported by police])** takes precedence over codes “0, 2, 3, 4, 6,” when multiple conditions exist.

**6 (Driverless/Motor Vehicle Parked/Stopped Off Roadway)** is used for both in-transport and not in-transport motor vehicles. This attribute should always be used if [UNIT TYPE](#) is coded as “2” or “3,” even if other applicable conditions exist. This attribute is also used to indicate that this is a “driverless” motor vehicle in-transport (e.g., driverless vehicle stopped in a travel lane). If indicating this is a “driverless” motor vehicle in-transport, this attribute does not take precedence over codes “0, 3, 4, 5,” when multiple conditions exist.

**9 (Unknown)** is used when information on the registered owner is unknown or unclear; and in certain cases when the driver cannot be determined, but the registered owner is known.

**Consistency Checks ([See Section 400](#)):**

| <b>Error ID</b> | <b>IF</b>                                                                    | <b>THEN</b>                                                                      |

## **vPIC Make/vPIC Model /vPIC Body Class Overview**

*Prior to 2020, VEHICLE MAKE, VEHICLE MODEL, AND BODY TYPE were coded based on the Vehicle Make/Model/Body Type table in this manual. This table will no longer be updated starting in the data collection year 2020.*

*VEHICLE MAKE, VEHICLE MODEL, and BODY TYPE have been renamed as follows:*

- *VEHICLE MAKE is now [NCSA MAKE](#)*
- *VEHICLE MODEL is now [NCSA MODEL](#)*
- *BODY TYPE is now [NCSA BODY TYPE](#)*

*Starting from 2020 data collection year, NHTSA has added a new set of data elements based on VIN decoding using NHTSA's tool, Product Information Catalog and Vehicle Listing (vPIC). These new data elements are:*

- *[VPIC MAKE](#): populated with vPIC data, derived from the VIN decoding.*
- *[VPIC MODEL](#): populated with vPIC data, derived from the VIN decoding.*
- *[VPIC BODY CLASS](#): populated with vPIC data, derived from the VIN decoding.*
- *[FINAL STAGE BODY CLASS](#): this data element will be captured only for vehicles that are "incomplete." These vehicles are completed after the VIN has been assigned. For these types of vehicles, NHTSA would like to capture the final (i.e., completed) vehicle body class. This data element should be filled based on the body class indicated on the police crash report or vehicle registration. Please note that this is not populated based on vPIC data.*
- *[POWER UNIT GVWR](#): populated with vPIC data, derived from the VIN decoding when available.*
- *[TRAILER GVWR](#): populated with vPIC data, derived from the VIN decoding when available. This element only captures the GVWR for the trailing unit of a combination vehicle.*

*The following data element has been removed:*

- *GVWR/GCWR: NHTSA decided to remove this element because GVWR and GCWR are two different specifications of a vehicle. Storing two values into one data element can cause confusion. Therefore, starting data collection year 2020, this element is removed. The GVWR for powering unit is stored in the new data element [POWER UNIT GVWR](#).*

*Users are required to decode the [VIN](#) first. The data elements [vPIC MAKE](#), [vPIC MODEL](#), [vPIC BODY CLASS](#), [POWER UNIT GVWR](#), [NCSA MAKE](#), [NCSA MODEL](#), and [NCSA BODY TYPE](#) are automatically populated with the decoded data if there is a VIN and the VIN decodes without any error.*

*If the [VIN](#) decodes with errors or the VIN is not available/applicable, the data elements [vPIC MAKE](#), [vPIC MODEL](#), [vPIC BODY CLASS](#), [POWER UNIT GVWR](#), [NCSA MAKE](#), [NCSA MODEL](#), and [NCSA BODY TYPE](#) may need to be manually filled based on the information from the PCR (FARS and CRSS) and vehicle registration (FARS only).*

**Reconstructed/Altered Vehicles:** In case of “homemade” vehicles *made* from drastically mixed parts, there may be no clear MAKE or MODEL. In addition, the State may issue an Identification Number in place of the Standard [VIN](#). In such cases, code *the* [vPIC MAKE](#), [vPIC MODEL](#), [NCSA MAKE](#), [NCSA MODEL](#), and [VEHICLE MODEL YEAR](#) as “9s” (*Unknown*). Code *the* [vPIC BODY CLASS](#) and [NCSA BODY TYPE](#) as appropriate. Be sure to use [RELATED FACTORS-VEHICLE LEVEL](#) code [035 \(Reconstructed/Altered Vehicle\)](#).

In reconstructed/altered vehicles where the modifications are less drastic and you can determine the *VIN*, *decode the VIN*. *If the VIN decodes cleanly, use the VIN decode information to code vPIC MAKE, vPIC MODEL, NCSA MAKE, NCSA MODEL, vPIC BODY CLASS, and NCSA BODY TYPE. In this situation, there might be a discrepancy between the decoded information and the information on the PCR. If the VIN is not available or does not decode cleanly, but the Make and Model can be determined, code these elements appropriately. Be sure to use the RELATED FACTORS-VEHICLE LEVEL code for 035 (Reconstructed/Altered Vehicle).*

If any detail is known regarding the vehicle’s Make/Model/Body/*Model* Year, code what is known and then code the other elements as unknown. For example, *if* you know it’s a Ford 4-door passenger car but the specific model and year are not reported, *please do the following:*

- [vPIC MAKE](#): choose “Ford” from the dropdown list;
- [NCSA MAKE](#): this field will be automatically mapped to 12 (Ford);
- [vPIC MODEL](#): choose “Unknown” from the dropdown list;
- [NCSA MODEL](#): choose 399 (Unknown (Automobile));
- [vPIC BODY CLASS](#): choose “Sedan;”
- [NCSA BODY TYPE](#): choose 04 (4-Door Sedan, Hard Top);
- [VEHICLE MODEL YEAR](#): choose 9999 (Unknown)

Code **Not Reported** only when [vPIC MAKE](#), [vPIC MODEL](#), [vPIC BODY CLASS](#), [NCSA MAKE](#), [NCSA MODEL](#), [NCSA BODY TYPE](#), and [VEHICLE MODEL YEAR](#) are all **Not Reported**.

### **Not Reported**

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”

Code **Not Reported** in these situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

## V9 - Vehicle Identification Number

**FORMAT:** 17 alphanumeric

**SAS NAME:** Vehicle.VIN, Parkwork.PVIN

### ELEMENT VALUES:

| Codes              | Attributes                                                |
|--------------------|-----------------------------------------------------------|
| 000000000000000000 | <a href="#">No VIN Required</a>                           |
| --                 | Any Alphanumeric Characters - Actual VIN number           |
| 888888888888888888 | <a href="#">Not Reported</a>                              |
| 999999999999999999 | <a href="#">Reported as Unknown</a>                       |
| *                  | <a href="#">VIN Character Missing or Not Decipherable</a> |

**Definition:** This element records the Vehicle Identification Number (VIN) or alphanumeric identifier in the case material of a single vehicle or the power unit of a combination vehicle.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

Code the complete VIN of the single vehicle or the power unit of a combination vehicle. The VIN is always left-justified. Trailer VINs are not coded in this element. See [TRAILER VEHICLE IDENTIFICATION NUMBER](#) to record the VIN on any trailer. If the VIN for the power unit of a combination vehicle is not available, code [8s \(Not Reported\)](#) for this element, rather than the trailer VIN.

The Vehicle Identification Number (VIN) standards are described in [49 CFR Part 565](#). This standard requires that each VIN have 17 characters, not contain the letter “I,” “O,” or “Q,” and pass a mathematical test (check digit). This data element may also be used to record non-standard VINs. See instruction under [\\* \(VIN Character Missing or Not Decipherable\)](#) for missing or illegible characters.

For a 17-character VIN that produces check digit errors, first attempt to resolve the error. If it cannot be resolved, record the VIN as provided and override any edit checks with explanation. See instruction under [\\* \(VIN Character Missing or Not Decipherable\)](#) for missing or illegible characters.

Only enter [8s \(Not Reported\)](#) or [9s \(Reported as Unknown\)](#) when the **entire** VIN is missing or unknown.

Enter all **0s (No VIN Required)** if the vehicle is not required to have a VIN as per [49 CFR Part 565](#) (e.g., ATVs, off-road motorcycles, farm tractors, go-carts) AND there is no VIN data available. If VIN data is available enter the VIN as provided in the case material.

**NOTE** for pre-1981 vehicles:

If the vehicle is manufactured by the Ford Motor Company and the VIN begins or ends with a script “f,” the script “f” is not entered. Proceed to the next character, as in the example below.

**Example:**

VIN: f3U62S100932f  
ENTER: 3U62S100932

In addition, if any hyphens or periods are contained in the string of alphanumeric characters, ignore them as in the example below.

**Example:**

VIN: S M - E . 3 0 7 6 4 2 1  
ENTER: S M E 3 0 7 6 4 2 1

**8s (Not Reported)** Check to see if 0s (No VIN Required) or 9s (Reported as Unknown) are more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **8s (Not Reported)** in these three situations:

1. no field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material), or
2. a field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material), or
3. information on the police crash report has been sanitized/redacted and no other information is available in the case material.

**9s (Reported as Unknown)** is used when the entire power unit VIN is reported as Unknown with no information available.

**\* (VIN Character Missing or Not Decipherable)** is used for any VIN character(s) that is (are) missing or not decipherable and the correct character(s) cannot be identified to resolve the VIN for the specific position(s).

**Notes regarding VINs with less than 17 digits:**

- Some vehicles (e.g., custom, pre-1981, imported, or rebuilt vehicles) may have been assigned identification numbers that are less than 17 digits. These should be entered as reported. Do not fill the remaining positions with asterisks "\*." **For example, 1102112486.**
- If a VIN is reported as less than 17 digits for a vehicle that would normally have 17 digits, and all characters are legible, fill with asterisks "\*" at the end for the missing character(s). **For example, JM2UF1114G0\*\*\*\*\*.**

**FARS SPECIAL INSTRUCTION:**

If the State will not allow transmittal of a complete standard VIN, *such as the State only allows transmitting the left-most 13 digits*, code the right-most four characters with asterisks "\*". *In the*

*case of errors, character omissions, or inconsistencies between the decoded values and the crash report Make/Model/Body Type, the vehicle registration file must be used to verify the VIN.*

*If the information from a cleanly decoded VIN (VIN decodes with no error) and the police crash report are inconsistent, try to resolve the conflict using other information in the case material including the vehicle registration. For example, if the VINs are accidentally switched between the vehicles by the police officer on the PCR, try to re-order the VINs to see if the conflict is resolved. If the conflict cannot be resolved, submit a VIN request to confirm the accuracy of the VIN decode information. If the VIN accuracy is confirmed and the conflict cannot be resolved, VIN decode results take precedence over PCR.*

#### **CRSS SPECIAL INSTRUCTION:**

If the information from a *cleanly* decoded VIN (VIN decodes with no error) and the police crash report are inconsistent, *try to resolve the conflict using other information in the case material. For example, if the VINs are accidentally switched between the vehicles by the police officer on the PCR, try to re-order the VINs to see if the conflict is resolved. If the conflict cannot be resolved, submit a VIN request to confirm the accuracy of the VIN decode information. If the VIN accuracy is confirmed and the conflict cannot be resolved, VIN decode results take precedence over PCR.*

*If there is no VIN and the information about Make and Model on the police crash report is inconsistent, Model takes precedence over the Make.*

#### **Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                    | <b>THEN</b>                                                                                                                                                                                                                                                                                                                    |

## V10 - Vehicle Model Year

**FORMAT:** 4 numeric

**SAS NAME:** Vehicle.MOD\_YEAR, Person.MOD\_YEAR, Parkwork.PMODYEAR

### ELEMENT VALUES:

| Codes | Attributes                   |
|-------|------------------------------|
| ----  | Actual Four Digit Model Year |
| 9998  | <a href="#">Not Reported</a> |
| 9999  | <a href="#">Unknown</a>      |

**Definition:** This element identifies the manufacturer's model year of this vehicle.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

### 9998 (Not Reported)

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **9998 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

***Code all four digits of the model year for which the vehicle was manufactured as shown on the PCR. For an example, if a vehicle model year is shown on the PCR as "85," Model Year field should be coded as "1985."***

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                                   | THEN                                                                 |
|----------|------------------------------------------------------|----------------------------------------------------------------------|
| 1C0P     | the VEHICLE MODEL YEAR is not equal to 9998 or 9999, | the VEHICLE MODEL YEAR must not be greater than CRASH YEAR plus ONE. |

**Definition:** This element identifies the Make (manufacturer brand name) of this vehicle as per NHTSA vPIC submissions.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

Because the vPIC dataset is updated frequently when new or updated VIN decode information are submitted by vehicle manufacturers, the following URL is provided to retrieve the most up-to-date vPIC Make for reference:

<https://vpic.nhtsa.dot.gov/api/vehicles/getallmakes?format=csv>.

If there is a VIN that can be cleanly decoded, vPIC Make is automatically populated in the coding software. If there is no VIN or the VIN is decoded with error, i.e., manual coding is required, the most up-to-date list of vPIC Make is made available in the coding software for selection. Note that for both vPIC MAKE and vPIC MODEL, the use of the terms “Other” and “Unknown” have very specific meanings. “Other” refers to a Make or Model that is known but is not explicitly listed. “Unknown” refers to the situation where no specific make or model is known.

99997 (Other) is used when the make or model is known, but it is not explicitly listed Makes.

99998 (Not Reported)

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”

Code 99998 (Not Reported) in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS

attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

99999 (Unknown) is used when the vehicle is reported as Unknown unless reliable evidence indicates the vehicle's make. If any detail is known regarding the vehicle's MAKE/MODEL/BODY/MODEL YEAR, code what is known and then code the other elements as Unknown. If a vehicle Make or vehicle Model is encountered that is not listed, NHTSA headquarters is notified.

Consistency Checks ([See Section 400](#)):

**Definition:** This element identifies the Model of this vehicle using NHTSA's VIN decoder application, vPIC.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

If there is a VIN that can be decoded cleanly, vPIC Model is automatically populated in the coding software. If there is no VIN or the VIN decodes with error, this value should be manually coded. Based on the vPIC Make selected, the most up-to-date list of vPIC Model is made available for selection in the coding software. Without a VIN or a VIN with decode error, the selection of the Model should be based on the information from the Vehicle Registration (FARS Only) or PCR.

For reference, to look up the vPIC Models for a given vPIC Make, please pass a valid Make ID or Make Name in the URLs as follows:

- Replace \* in the URL with vPIC Make ID (see examples below):  
[https://vpic.nhtsa.dot.gov/api/vehicles/GetModelsForMakeId/\\*?format=csv](https://vpic.nhtsa.dot.gov/api/vehicles/GetModelsForMakeId/*?format=csv)
- Replace \* in the URL with vPIC Make Name (see examples below):  
[https://vpic.nhtsa.dot.gov/api/vehicles/getmodelsformake/\\*?format=csv](https://vpic.nhtsa.dot.gov/api/vehicles/getmodelsformake/*?format=csv)

**Example 1:** Use the following URL to see all the Models for Buick:

Use Buick Make ID 468 as parameter:

<https://vpic.nhtsa.dot.gov/api/vehicles/GetModelsForMakeId/468?format=csv>

Use the Make Name "Buick" as parameter:

<https://vpic.nhtsa.dot.gov/api/vehicles/getmodelsformake/Buick?format=csv>

**Example 2: Use the following URL to see all the Models for Toyota**

**Use Toyota Make ID 448 as parameter:**

**<https://vpic.nhtsa.dot.gov/api/vehicles/GetModelsForMakeId/448?format=csv>**

**Use the Make Name “Toyota” as parameter:**

**<https://vpic.nhtsa.dot.gov/api/vehicles/getmodelsformake/Toyota?format=csv>**

**Note that for both vPIC MAKE and vPIC MODEL, the use of the terms “Other” and “Unknown” have very specific meanings. “Other” refers to a Make or Model that is known but is not explicitly listed. “Unknown” refers to the situation where no specific Make or Model is known.**

**99997 (Other) is used when the make or model is known, but it is not explicitly listed Models.**

**99998 (Not Reported)**

**If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”**

**Code 99998 (Not Reported) in these two situations:**

- 1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).**
- 2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).**

**99999 (Unknown) is used when the vehicle is reported as Unknown unless reliable evidence indicates the vehicle’s make. If any detail is known regarding the vehicle’s MAKE/MODEL/BODY /MODEL YEAR, code what is known and then code the other elements as Unknown.**

**If a vehicle Make or vehicle Model is encountered that is not listed, NHTSA headquarters is notified.**

**Consistency Checks [\(See Section 400\)](#):**

| 999   | <a href="#"><u>Unknown</u></a>                |

**Definition:** This element identifies a classification of this vehicle based on its general body configuration, size, shape, doors, etc. as defined by the manufacturer.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE/ vPIC MODEL / vPIC BODY CLASS OVERVIEW](#)

vPIC BODY CLASS is what vehicle manufacturers are required to report to NHTSA through [49 CFR Part 565](#) submissions except in the case of off-road vehicles. Off-road vehicles are not required to be reported to NHTSA and any information should be considered provided in a voluntary sense, which may not cover all off-road vehicles. The following definitions are guidelines to code this data element manually when the VIN is unknown or cannot be decoded cleanly.

If the vehicle is an [Incomplete vehicle](#) and its vPIC BODY CLASS belongs to one of the Incomplete Vehicle codes, enter the completed body class for this vehicle under [FINAL STAGE BODY CLASS](#).

001 (Convertible/Cabriolet) refers to a passenger car equipped with a removable or retractable roof. To qualify for this code, the entire roof must open. Convertible roofs are generally fabric; however, removable hardtops are also included.

002 (Minivan) refers to down-sized cargo or passenger unibody vans.

003 (Coupe) refers to a passenger car equipped usually with two/three doors for ingress/egress and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate "trunk area" concept. These cars have a sporty flair and can also come with 4 doors.

004 (Low Speed Vehicle (LSV)/Neighborhood Electric Vehicle (NEV)) refers to a vehicle that is designed for travel on secondary roads with speed limits equal to or less than 35 mph. LSVs can sometimes resemble golf carts but differ in that they must adhere to Federal Motor Vehicle Safety Standard (FMVSS) 500. Provisions of FMVSS 500 include the following.

***The Vehicle must have:***

- ***Four wheels***
- ***Top speed of at least 20 mph, but it cannot exceed 25 mph***
- ***GVWR\_to and GVWR\_from less than 3,001 pounds***
- ***Head, turn signal, and tail lamps***
- ***Reflex reflectors***
- ***Parking brake***
- ***Rear view mirrors***
- ***Windshield***
- ***Safety belts***
- ***Seventeen (17) character VIN***

***005 (Hatchback/Liftback/Notchback) refers to a passenger car equipped with two/four doors for ingress/egress and a rear hatch opening for cargo (e.g., hinged above the backlight). The cargo area is not permanently partitioned from the passenger compartment area.***

***006 (Motorcycle - Standard) is used when a motor vehicle having a seat or saddle for the use of its operator is a two-wheeled open (e.g., no enclosed body) vehicle propelled by a motor. Motorcycles equipped with a side car should use the code [090 \(Motorcycle-Side car\)](#).***

***007 (Sport Utility Vehicle (SUV)/Multi-Purpose Vehicle (MPV)) refers to a passenger motor vehicle constructed either on a truck chassis or with special features for occasional off-road operation.***

***008 (Crossover Utility Vehicle (CUV)) refers to a type of sports utility vehicle often built on the same platform as passenger cars. Therefore, these CUVs often have less off-road capability than truck-based SUVs.***

***009 (Van) Van means a vehicle with a body that fully encloses the driver and a cargo carrying or work performing compartment. The distance from the leading edge of the windshield to the foremost body section of vans is typically shorter than that of pickup trucks and sport utility vehicles per 49 CFR § 523.2. This attribute applies in case it is not clear if it is a [002 \(Minivan\)](#) or [095 \(Cargo Van\)](#).***

***010 (Roadster) refers to an open two-seat passenger car with emphasis on sporting appearance or character.***

***011 (Truck) A truck is a motor vehicle designed to transport cargo. 011 (Truck) includes light, medium, and heavy truck body styles.***

***012 (Motorcycle - Scooter) refers to a light, two-wheeled, open motor vehicle on which the driver sits over an enclosed engine with legs together and feet resting on a floorboard.***

***013 (Sedan/Saloon) refers to a passenger car equipped usually with four doors for ingress/egress and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate “trunk area” concept. Sedan/Saloon***

can sometimes have only 2-doors. If it is not clear whether the vehicle is a [003 \(Coupe\)](#) or 013 (Sedan/Saloon), code as 013 (Sedan/Saloon).

015 (Wagon) refers to a passenger car with an enlarged cargo area. The entire roof covering the cargo area is generally equal in height from front to rear and full height side glass is installed between the C and D-pillars. The rearmost area is not permanently partitioned from the forward passenger compartment area (e.g., “horizontal window shades” to hide cargo do not constitute partitions).

016 (Bus) means a motor vehicle with motive power, except a trailer, designed for carrying more than 10 people per 49 CFR§ 571.3. [068 \(Streetcar / Trolley\)](#) or [73 \(Bus - School Bus\)](#) are categorized separately.

060 (Pickup) is a single unit straight truck with a pickup body style. The pickup truck may be equipped with a removable or retractable roof. 060 (Pickup) includes light, medium, and heavy pickup body styles.

066 (Truck-Tractor) describes a fifth wheel equipped tractor-trailer power unit. The number of trailing units is not a consideration. Without trailers, it is sometimes called a Bobtail.

068 (Streetcar / Trolley) A vehicle used primarily for transporting passengers and typically operating on city streets. This vehicle must have tires. Do NOT use this attribute for street cars/trolleys operating on rails. See [Section 203. How to Structure a Case, Step 1: Number of Persons Not in Motor Vehicles](#).

069 (Off-road Vehicle - All Terrain Vehicle (ATV) (Motorcycle-style)) is used for off-road recreational vehicles. ATV/ATCs have 3 or 4 wheels, a saddle type seat, and handlebars for steering (no steering wheel). Does not include [105 \(Off-road Vehicle - Recreational Off-Highway Vehicles \(ROV\)\)](#).

073 (Bus - School Bus) (designed to carry students, not cross -country or transit) is a bus designed to carry passengers to and from educational facilities and/or related functions. Use this code regardless of whether the vehicle is owned by a school system or a private company. School buses converted for other uses (e.g., church bus) also take this code.

080 (Motorcycle - Sport) is used when a motor vehicle having a seat or saddle for the use of its operator is a two-wheeled open (e.g., no enclosed body) vehicle propelled by a motor specifically optimized for speed, acceleration, braking, and cornering on paved roads.

081 (Motorcycle - Touring / Sport Touring) are specifically designed to excel at covering long distances. They have large-displacement engines, fairings and screens that offer good weather and wind protection, large-capacity fuel tanks for long ranges between fill-ups, and a relaxed, upright seating position.

082 (Motorcycle - Cruiser) are motorcycles usually with large-displacement V-twin engines with a riding position that places the feet forward and the hands relatively high.

083 (Motorcycle - Trike) is used when the vehicle is a three-wheeled open vehicle propelled by a motor, or a three-wheeled motorized bicycle capable of moving either by pedaling or by a motor.

084 (Off-road Vehicle - Dirt Bike / Off-Road) is used when the vehicle is a two-wheeled open vehicle propelled by a motor designed or built for off-road use only.

**085 (Motorcycle - Dual Sport / Adventure / Supermoto / On/Off-Road)** are street legal machines that are also designed to enter off-road situations. Typically based on a dirt bike chassis, they have added lights, mirrors, signals, and instruments that allow them to be licensed for public roads.

**086 (Off-road Vehicle - Enduro (Off-road long-distance racing))** are off-road motorcycles that are modified for riders to compete over a longer course.

**087 (Motorcycle - Small / Minibike)** A minibike is a miniature motorcycle. Most minibikes have a four-stroke engine and are chain driven. This includes Pocketbike, Mini Choppers, etc.

**088 (Off-road Vehicle - Go Kart)** is a type of open-wheel car built for off-road use only.

**090 (Motorcycle - Side Car)** is used when a motor vehicle having a seat or saddle for the use of its operator is a two-wheeled open (e.g., no enclosed body) vehicle propelled by a motor and equipped with a side car. Only motorcycles equipped with a side car should use this code.

**094 (Motorcycle - Custom)** A custom motorcycle is a motorcycle with stylistic and/or structural changes to the “standard” mass-produced machine offered by major manufacturers. Custom motorcycles might be unique or built in limited quantities. Bobber, Chopper, Scrambler, Cafe Racer, Streetfighter are examples of custom motorcycles.

**095 (Cargo Van)** refers to a standard van specifically used for cargo.

**097 (Off-road Vehicle - Snowmobile)** refers to a vehicle designed to be operated over snow propelled by a motor.

**098 (Motorcycle - Street)** are motorcycles designed to be ridden on paved roads. They have smooth tires with a light tread pattern and engines generally in the 125 cc (7.6 cu in) and over range. Most are capable of speeds up to 100 mph (160 km/h), and many of speeds in excess of 125 mph (201 km/h).

**100 (Motorcycle - Enclosed Three Wheeled / Enclosed Autocycle)** A large motorcycle with three wheels, configured with two front wheels, a seat(s), and steering wheel and is completely enclosed.

**103 (Motorcycle - Unenclosed Three Wheeled / Open Autocycle)** A large motorcycle with three wheels, configured with two front wheels and a saddle with handlebars, or seat(s) and a steering wheel, but not completely enclosed.

**104 (Motorcycle - Moped)** is used when the vehicle is a speed-limited motor-driven cycle capable of moving either by pedaling or by a motor. Note: In the circumstance that a person operating a motorized bicycle is classified as a non-motorist on the police crash report, this person should be coded as a motor vehicle occupant rather than a non-motorist in FARS/CRSS.

**105 (Off-road Vehicle - Recreational Off-Road Vehicle (ROV))** ROVs are intended to be used on terrain similar to that on which all-terrain vehicles (ATVs) are used. ROVs are distinguished from ATVs by the presence of a steering wheel instead of a handlebar for steering, bench or bucket seats for the driver and passenger(s) instead of straddle seating, and foot controls for throttle and braking instead of levers located on the handlebar. In addition, ROVs have a rollover protective system (ROPS), restraint systems, and a maximum speed greater than 30 mph.

**108 (Motorhome)** is used when it is known the vehicle is a motor home. This includes light vehicle-based motor homes (chassis mounted), medium/heavy vehicle-based motor homes, and campers or motor homes with unknown GVWR.

**109 (Motorcycle - Cross Country)** Cross-country motorcycles are used for cross-country racing.

**110 (Motorcycle - Underbone)** is a motorcycle that uses structural tube framing with an overlay of plastic or non-structural body panels and contrasts with monocoque or unibody designs where pressed steel serves both as the vehicle's structure and bodywork.

**111 (Step Van / Walk-in Van)** refers to a multi-stop delivery vehicle. Examples are the Grumman LLV used by the U.S. Postal Service or the Aeromate manufactured by Utilimaster Motor Corporation.

**113 (Off-road Vehicle - Motocross (Off-road, short-distance, closed track racing))** Motocross is a form of off-road motorcycle racing held on enclosed off-road circuits.

**114 (Motorcycle - Competition)** the classification simply designates these motorcycles as being used in some sort of racing or competition.

**117 (Limousine)** A limousine is a luxury vehicle typically driven by a chauffeur with a partition between the driver's compartment and the passenger's compartment. Stretch limos, limo buses (also known as party buses), sedan limos, SUV limos, convertible limos, and all other types of limos would also be coded as 117 (Limousine).

**119 (Sport Utility Truck (SUT))** General Motors labels several of its vehicles as SUTs. These vehicles include Cadillac Escalade, Chevrolet Avalanche, Hummer Pickup Truck. The common features of these vehicles are that they are pickup-truck-based sport utility vehicles with 4 doors and a pickup truck beds.

**124 (Off-road Vehicle - Golf Cart)** is a motor vehicle that is designed and manufactured for operation on a golf course for sporting or recreational purposes. Golf carts or golf cars are different from code [004 \(Low speed vehicle \(LSV\)/ Neighborhood Electric Vehicle \(NEV\)\)](#) in that if they are manufactured to go less than 20 mph, they are not subject to the Federal Motor Vehicle Safety Standard (FMVSS) 500. Thus, golf carts will not have a 17-digit VIN. Golf carts will have a nonstandard serial number that may be reported in the case material. Also, typically golf carts will not have safety features required of LSVs/NEVs under the FMVSS like safety belts, head lights, turn signal and tail lamps, rear view mirrors, etc., but may if made to be street legal.

**125 (Motorcycle - Unknown Body Type)** Use this code if you are unable to determine the specific type of Motorcycle (i.e., one of the other motorcycle attributes).

**126 (Off-road Vehicle - Farm Equipment)** This attribute is not under [49 CFR Part 565](#) regulation. Farm equipment is an off-road vehicle and does not require a VIN. This attribute is added so that the user can manually code farm equipment related crashes. Farm equipment refers to farming implements other than trucks propelled by a motor (farm tractors, combines, etc.).

**127 (Off-road Vehicle - Construction Equipment)** This attribute is not under [49 CFR Part 565](#) regulation. Construction equipment is an off-road vehicle and does not require a VIN. This attribute is added so that the user can manually code construction equipment related crashes.

*Construction equipment refers to construction equipment other than trucks propelled by a motor (bulldozer, road grader, etc.).*

### ***Incomplete Vehicles***

*If any of these attributes are used, [FINAL STAGE BODY CLASS](#) must also be completed.*

- *062 (Incomplete - Cutaway)*
- *063 (Incomplete - Chassis Cab (Single Cab))*
- *064 (Incomplete - Glider)*
- *065 (Incomplete)*
- *067 (Incomplete - Stripped Chassis)*
- *070 (Incomplete - Chassis Cab (Double Cab))*
- *071 (Incomplete - School Bus Chassis)*
- *072 (Incomplete - Commercial Bus Chassis)*
- *074 (Incomplete - Chassis Cab (Number of Cab Unknown))*
- *075 (Incomplete - Transit Bus Chassis)*
- *076 (Incomplete - Motor Coach Chassis)*
- *077 (Incomplete - Shuttle Bus Chassis)*
- *078 (Incomplete - Motor Home Chassis)*
- *107 (Incomplete - Bus Chassis)*
- *112 (Incomplete - Commercial Chassis)*

*997 (Other) is used when the motorized vehicle in question does not qualify for any of the above listed body classes.*

### ***998 (Not Reported)***

*If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."*

*Code 998 (Not Reported) in these two situations:*

- 1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).*
- 2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).*

*999 (Unknown) is used when the available information regarding the type of vehicle is reported as Unknown.*

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                        | <b>THEN</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Definition:** This element identifies the make (manufacturer) of this vehicle *by NHTSA historically*.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

*Historically NCSA MAKE attributes are organized into general groups. These groups are:*

| <i>Codes</i> | <i>Attributes</i>                                                     |
|--------------|-----------------------------------------------------------------------|
| <b>01-28</b> | <b><i>Domestic Passenger Car</i></b>                                  |
| <b>29</b>    | <b><i>Other Domestic Passenger Car</i></b>                            |
| <b>30-67</b> | <b><i>Import Passenger Car</i></b>                                    |
| <b>69</b>    | <b><i>Other Import Passenger Car</i></b>                              |
| <b>70-77</b> | <b><i>Motored Cycle/Moped</i></b>                                     |
| <b>80-89</b> | <b><i>Truck/Bus</i></b>                                               |
| <b>90-94</b> | <b><i>Bus</i></b>                                                     |
| <b>97</b>    | <b><i>Not Reported</i></b>                                            |
| <b>98</b>    | <b><i>Other Make (where MAKE “29” or “69” are not applicable)</i></b> |
| <b>99</b>    | <b><i>Unknown Make</i></b>                                            |

Note that for both **NCSA MAKE** and **NCSA MODEL**, the use of the terms “other” and “unknown” have very specific meanings. “Other” refers to a make or model that is known but is not explicitly listed. “Unknown” refers to the situation where no specific make or model is known. Examples: **399 (Unknown (Automobile))**, **499 (Unknown (Light Truck))**, **739 (Unknown cc (ATV))**, **884 (Medium/Heavy Truck - Unknown Engine Location)**, **999 (Unknown)**.

Selection of the proper “other” or “unknown” code can only be made with consideration of the vehicle’s [NCSA BODY TYPE](#). For example, if a medium/heavy truck or bus make is known and is not listed, **NCSA MAKE** is coded **Other Make (med/heavy truck/bus or “other”)** and the appropriate model code is used. If the make is unknown but the body type is known as a “school bus,” for instance, **NCSA MAKE** is coded **99 (Unknown Make)** and **NCSA MODEL** is coded **989 (Unknown (Bus))**.

**97 (Not Reported) Code Not Reported only when vPIC MAKE, vPIC MODEL, vPIC BODY CLASS, NCSA MAKE, NCSA MODEL, NCSA BODY TYPE, and VEHICLE MODEL YEAR are ALL Not Reported. If you have partial information, see [99 \(Unknown Make\)](#).**

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported**.”

Code **97 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).

2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Unknown Make)** is used when the vehicle is reported as Unknown unless reliable evidence indicates the vehicle's make. *If any detail is known regarding the vehicle's MAKE / MODEL/BODY / MODEL YEAR, code what is known and then code the other elements as Unknown.*

Please refer to the Appendix [Alphabetical Listing of NCSA Makes](#);

Please refer to the Appendix [Numerical Listing of NCSA Makes](#).

Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                                                                                                                                                                                                                                    | THEN                                                                                                                                                                               |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 920P     | any one of the fields <b>NCSA MAKE</b> , <b>NCSA MODEL</b> , <b>NCSA BODY TYPE</b> , and <b>VEHICLE MODEL YEAR</b> , equals Not Reported [ <b>NCSA MAKE</b> (97), <b>NCSA MODEL</b> (997), <b>NCSA BODY TYPE</b> (98), and <b>VEHICLE MODEL YEAR</b> (9998)],         | the other three must also equal Not Reported.                                                                                                                                      |

**Definition:** This element identifies the *NCSA* model of this vehicle within a given *NCSA* make.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

*NCSA MODEL* refers to the series of vehicles for a make (e.g., Pintos, Galaxies, Mustangs are Models of Ford). It does not refer to the various styles within a model unless they are listed in the codes for *NCSA MODEL*.

*NCSA MODEL* attributes are organized into general groups. These groups are:

| Codes   | Attributes                                                                                                                                                                                                                   |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 001-399 | <i>Passenger Car (automobile)</i>                                                                                                                                                                                            |

| 898     | <i>Other, Unknown, truck over 10,000 lbs. GVWR.</i>                                                                                                                                                                          |
| 980-996 | <i>All buses except those that are van-based.</i>                                                                                                                                                                            |
| 988     | <i>Other bus over 10,000 lbs. GVWR.</i>                                                                                                                                                                                      |
| 989     | <i>Unknown Bus</i>                                                                                                                                                                                                           |
| 997     | <i>Not Reported</i>                                                                                                                                                                                                          |
| 998     | <i>Other Vehicle</i>                                                                                                                                                                                                         |
| 999     | <i>Unknown Vehicle</i>                                                                                                                                                                                                       |

Note that for both *NCSA MAKE* and *NCSA MODEL*, the use of the terms “other” and “unknown” have very specific meanings. “Other” refers to a make or model that is known but is not explicitly listed. “Unknown” refers to the situation where no specific make or model is known. Examples: 399 (Unknown (Automobile)), 499 (Unknown (Light Trucks)), 739 (Unknown cc (ATV)), 884 (Medium/Heavy Trucks - Unknown Engine Location), 999 (Unknown).

Selection of the proper “other” or “unknown” code can only be made with consideration of the vehicle’s [NCSA BODY TYPE](#). For example, if a medium/heavy truck or bus make is known and is not listed, **NCSA MAKE** is coded **Other Make (med/heavy truck/bus or “other”)** and the appropriate model code is used. If the make is unknown but the body type is known as a “school bus,” for instance, **NCSA MAKE** is coded **99 (Unknown Make)** and **NCSA MODEL** is coded **989 (Unknown (Bus))**.

**997 (Not Reported) Code Not Reported only when vPIC MAKE, vPIC MODEL, vPIC BODY CLASS, NCSA MAKE, NCSA MODEL, NCSA BODY TYPE, and VEHICLE MODEL YEAR are ALL Not Reported. If you have partial information, see [999 \(Unknown\)](#).**

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported**.”

Code **997 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**999 (Unknown) is used when the vehicle is reported as unknown unless reliable evidence indicates the vehicle’s model. If any detail is known regarding the vehicle’s NCSA MAKE / NCSA MODEL / NCSA BODY TYPE / VEHICLE MODEL YEAR, code what is known and then code the other elements as Unknown.**

**Consistency Checks [\(See Section 400\)](#):**

### Not Reported and Unknown Body Type

| Codes | Attributes                        |
|-------|-----------------------------------|
| 98    | <a href="#">Not Reported</a>      |
| 99    | <a href="#">Unknown Body Type</a> |

**Definition:** This element identifies a classification of this vehicle based on its general body configuration, size, shape, doors, etc.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

## **AUTOMOBILES**

These attributes are used to classify different types of passenger cars. These types of light vehicles, referred to as automobiles, are designed primarily to transport eight or fewer people.

**01 (Convertible [excludes sunroof and t-bar])** refers to a passenger car equipped with a removable or retractable roof. To qualify for this code, the entire roof must open. Convertible roofs are generally fabric; however, removable hardtops are also included. This attribute takes priority over 2-door or 4-door codes.

**02 (2-Door Sedan, Hardtop, Coupe)** refers to a passenger car equipped with two doors for ingress/egress and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate “trunk area” concept.

**03 (3-Door/2-Door Hatchback)** refers to a passenger car equipped with two doors for ingress/egress and a rear hatch opening for cargo (e.g., hinged above the backlight). The cargo area is not permanently partitioned from the passenger compartment area.

**04 (4-Door Sedan, Hardtop)** refers to a passenger car equipped with four doors for ingress/egress and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate “trunk area” concept.

**05 (5-Door/4-Door Hatchback)** refers to a passenger car equipped with four doors for ingress/egress and a rear hatch opening for cargo (e.g., hinged above the backlight). The cargo area is not permanently partitioned from the passenger compartment area.

**06 (Station Wagon [excluding van and truck based])** refers to a passenger car with an enlarged cargo area. The entire roof covering the cargo area is generally equal in height from front to rear and full height side glass is installed between the C and D-pillars. The rearmost area is not permanently partitioned from the forward passenger compartment area (e.g., “horizontal window shades” to hide cargo do not constitute partitions).

**07 (Hatchback, Number of Doors Unknown)** refers to a passenger car with an unknown number of doors for ingress/egress and a rear hatch opening for cargo (e.g., hinged above the backlight). The cargo area is not permanently partitioned from the passenger compartment area.

**17 (3-Door Coupe)** refers to a passenger car equipped with three doors for ingress/egress in which 2 of the doors are located on the driver’s side and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate “trunk area” concept.

**08 (Sedan/Hardtop, Number of Doors Unknown)** refers to a passenger car equipped with an unknown number of doors for ingress/egress and a separate trunk area for cargo (e.g., trunk lid hinged below the backlight). Folding rear seats do not necessarily violate the separate “trunk area” concept.

**09 (Other or Unknown Automobile Type)** is used for any passenger car that cannot be described by the other automobile codes OR when it is known that the vehicle is a passenger car, but there is insufficient data to determine the type. Do not use this attribute if the police crash report alone or in combination with other information gives sufficient detail to identify a more specific attribute.

- **Example #1:** If the possible choices are codes “01,” “02,” or “09,” but there is enough detail to identify that it is a 2-door and that it is NOT a convertible, then use [02 \(2-Door Sedan, Hardtop, Coupe\)](#).
- **Example #2:** If there is information that it is a 4-door and the police crash report eliminates the possibility of a hatchback or station wagon, then use [04 \(4-Door Sedan, Hardtop\)](#).

## ***AUTOMOBILE DERIVATIVES***

This describes certain passenger cars that have been modified to perform cargo-related tasks.

**10 (Auto-Based Pickup)** refers to a passenger car based, pickup type vehicle. The roof area (and side glass) rearward of the front seats on a station wagon have been removed and converted into a pickup-type cargo box.

**11 (Auto-Based Panel (Cargo Station Wagon, auto-based Ambulance/Hearse))** refers to an automotive station wagon that may have sheet metal rearward of the B-pillar rather than glass.

**12 (Large Limousine)** - more than four side doors or stretched chassis refers to an automobile that has sections added within its wheelbase to increase length and passenger/cargo carrying capacity.

**13 (Three-Wheel Automobile or Automobile Derivative)** refers to three-wheel vehicles with an enclosed passenger compartment not including [82 \(Three-Wheeled Motorcycle \(2 Rear Wheels\)\)](#) or [86 \(Enclosed Three Wheel Motorcycle/Enclosed Autocycle \(1 Rear Wheel\)\)](#).

## ***UTILITY VEHICLES (Less than or equal to 10,000 lbs GVWR)***

Utility Vehicles are designed for carrying people, and generally considered a multi-purpose vehicle that is designed to have off-road capabilities. These vehicles are generally four-wheel drive (4 x 4), have increased ground clearance, and are equipped with a strong frame. Four-wheel drive automobiles are not considered utility vehicles.

**14 (Compact Utility)** refers to a short wheelbase and narrow tracked multi-purpose vehicle designed to operate in rugged terrain.

**15 (Large Utility)** refers to full-size multi-purpose vehicles primarily designed around a shortened pickup truck chassis. Generally, a station wagon style body, some models are equipped with a removable top.

**16 (Utility Station Wagon)** refers primarily to a pickup truck-based chassis enlarged to a station wagon.

**19 (Utility Vehicle, Unknown Body Type)** is used when it is known that the vehicle is a utility vehicle, but there is insufficient data to determine the specific type.

### ***VAN-BASED LIGHT TRUCKS (GVWR less than or equal to 10,000 lbs)***

Van-Based Light Trucks (less than or equal to 10,000 lbs GVWR) are designed to maximize cargo/passenger area versus overall length. Basically a “box on wheels,” these vehicles are identifiable by their enclosed cargo/passenger area and relatively short (or non-existent) hood.

**20 (Minivan)** refers to down-sized cargo or passenger unibody vans.

**21 (Large Van)** refers to a standard cargo or passenger van and includes van-based buses less than 10,001 lbs GVWR. These vans will generally have a larger capacity in both volume and GVWR.

**22 (Step Van or Walk-In Van [less than or equal to 10,000 lbs. GVWR])** refers to a multi-stop delivery vehicle with a GVWR less than or equal to 10,000 lbs Examples are the Grumman LLV used by the U.S. Postal Service or the Aeromate manufactured by Utilimaster Motor Corporation.

**28 (Other Van Type)** refers to a cargo or delivery van where the chassis and cab portions from the B-pillar forward of this vehicle are the same as in Minivans or Large Vans with a frame mounted cargo area unit added behind the driver/cab area or if the van cannot be described as a Minivan, Large Van, Step-van, or a Van-based motor home. Annotate the van type when using this code. This code takes priority over Minivans and Large Vans.

**29 (Unknown Van Type)** is used when it is known that this vehicle is a light van, but its specific type cannot be determined.

### ***LIGHT CONVENTIONAL TRUCKS (Pickup Style Cab, GVWR less than or equal to 10,000 lbs)***

Light Conventional Trucks are used to describe vehicles commonly referred to as pickup trucks and some of their derivatives. These light trucks are characteristically designed with a small cab containing a single row of seats (extended cabs with additional seats are available for some models), a large hood covering a conventional engine placement, and a separate open box area (approximately 180 to 240 centimeters long) for cargo.

**33 (Convertible Pickup)** refers to a pickup truck equipped with a removable or retractable roof. To qualify for this code, the entire roof must open. Convertible roofs are generally fabric; however, removable hardtops are also included. This code takes priority over compact and large pickups.

**34 (Light Pickup)** is a single unit straight truck with a pickup body style and a GVWR of 10,000 lbs or less.

**39 (Unknown (Pickup Style) Light Conventional Truck Type)** is used when this vehicle is a Light Conventional Truck, but there is insufficient data to determine the specific code.

### ***OTHER LIGHT TRUCKS (GVWR less than or equal to 10,000 lbs.)***

Other Light Trucks are used to describe vehicles that are based upon a conventional light pickup frame, but a commercial or recreational body has been affixed to the frame rather than a pickup box.

**40 (Cab Chassis Based [includes rescue vehicles, light stake, dump, and tow truck])** is used to describe a light vehicle with a pickup style cab and a commercial (non-pickup) body attached to the frame. Included are pickup based ambulances and tow trucks.

**41 (Truck Based Panel)** is used to describe a truck-based station wagon that has sheet metal rather than glass above the beltline rearward of the B-pillars.

**45 (Other Light Conventional Truck Type)** is used for light conventional trucks that cannot be described elsewhere.

**48 (Unknown Light Truck Type)** is used when it is known that the vehicle is a light truck but further classification into one of the more detailed light truck categories (utility, van, pickup, or other light trucks) is not possible. Example: It is known the light vehicle is a utility vehicle or van, but it can't be determined which one.

**49 (Unknown Light Vehicle Type [automobile, utility, van, or light truck])** is used when it is known that the vehicle is a light vehicle, but insufficient data exists to specify what type of light vehicle it is.

### ***BUSES (excludes van-based buses with GVWR less than or equal to 10,000 lbs)***

Buses are defined as any motor vehicle designed primarily to transport large groups of passengers (nine or more people, including the driver).

**50 (School Bus)** (designed to carry students; not cross-country or transit) is a bus designed to carry passengers to and from educational facilities and/or related functions. The vehicles are characteristically painted yellow and clearly identified as school buses. Use this code regardless of whether the vehicle is owned by a school system or a private company. School buses converted for other uses (e.g., church bus) also take this code.

**51 (Cross Country/Intercity Bus)** describes a bus body type designed to travel long distances between cities (e.g., Greyhound).

**52 (Transit Bus [City Bus])** describes a bus body type designed for public transportation typically within a city.

**55 (Van-Based Bus GVWR greater than 10,000 lbs.)** describes a bus body type built on a van-based chassis.

**58 (Other Bus Type)** is a vehicle designed/converted to carry nine or more people, including the driver, not described by the attributes [50 \(School Bus\)](#), [51 \(Cross Country/Intercity Bus\)](#), [52 \(Transit Bus\)](#), or [55 \(Van-Based Bus\)](#). Examples include a specialized tour bus or bus-based motor home.

**59 (Unknown Bus Type)** is used when it is known the transport device is a bus but there is insufficient data to choose between the bus attributes.

## **MEDIUM/HEAVY TRUCKS (GVWR greater than 10,000 lbs)**

Medium/Heavy Trucks describe a single-unit truck specifically designed for carrying cargo on the same chassis as the cab. They pertain to a truck-tractor designed for towing trailers or semi-trailers. Although towing is their primary purpose, some truck-tractors are equipped with cargo areas located rearward of the cab.

**60 (Step Van [Greater than 10,000 lbs. GVWR])** defines a single-unit, enclosed body with a GVWR greater than 10,000 lbs and an integral driver's compartment and cargo area. Step vans are generally equipped with a folding driver seat mounted on a pedestal and a sliding door for easy ingress/egress.

**61-63 (Single-Unit Straight Truck or Cab-chassis)** describes a non-articulated truck designed to carry cargo. The attribute selected is based on the applicable GVWR range for the vehicle. Includes "incomplete" or "cutaway."

**64 (Single-Unit Straight Truck or Cab-chassis [GVWR unknown])** describes a medium/heavy non-articulated truck designed to carry cargo. It is known not to be a step van, van, or pickup truck, but its GVWR is unknown. Includes "incomplete" or "cutaway."

**66 (Truck-Tractor [Cab only or with any number of trailing units])** describes a fifth wheel equipped tractor-trailer power unit. The number of trailing units is not a consideration.

**67 (Medium/Heavy Pickup [GVWR greater than 10,000 lbs.])** is a single-unit straight truck with a pickup body style with a GVWR greater than 10,000 lbs. Examples include the Ford Super Duty 350, 450, or 550.

**78 (Unknown Medium/Heavy Truck Type)** is used when it is unknown whether the medium/heavy truck is a single-unit truck or a truck-tractor and/or trailer combination and it is known that the vehicle is either a medium or heavy truck with GVWR greater than 10,000 lbs.

**79 (Unknown Truck Type [light/medium/heavy])** is used when it is known that this vehicle is a truck, but there is insufficient data to classify the vehicle further.

## **MOTOR HOMES**

Motor Homes are recreational vehicles mounted on an incomplete vehicle chassis that is suitable to live in and drive across the country.

**42 (Light Vehicle Based Motor Home [chassis mounted])** is used to describe a frame mounted recreational unit attached to a light van or conventional chassis.

**65 (Medium/Heavy Vehicle Based Motor Home)** describes a recreational vehicle mounted on a single unit medium/heavy truck chassis, *van-based cutaway, bus chassis, or motorhome strip chassis*.

**73 (Camper or Motor Home, Unknown GVWR)** is used when it is known the vehicle is a camper or motor home, but *it* is unknown *if it is a* [42 \(Light Vehicle Based Motor Home \[chassis mounted\]\)](#) *or a* [65 \(Medium/Heavy Vehicle Based Motor Home\)](#).

## **MOTORCYCLES, MOPEDS, ALL-TERRAIN VEHICLES, ALL-TERRAIN CYCLES**

**80 (Two Wheel Motorcycle (excluding motor scooters))** is used when a motor vehicle having a seat or saddle for the use of its operator is a two-wheeled open (e.g., no enclosed body) vehicle propelled by a motor. Motorcycles equipped with a side car also use this code.

**81 (Moped or Motorized Bicycle)** is used when the vehicle is a speed-limited motor-driven cycle capable of moving either by pedaling or by a motor. **Note:** In the circumstance that a person operating a motorized bicycle is classified as a non-motorist on the police crash report, this person should be coded as a motor vehicle occupant rather than a non-motorist in FARS/CRSS.

**82 (Three-Wheeled Motorcycle (2 Rear Wheels))** is used when the vehicle is a three-wheeled open vehicle propelled by a motor, or a three-wheeled motorized bicycle capable of moving either by pedaling or by a motor.

**83 (Off-Road Motorcycle)** is used when the vehicle is a two-wheeled open vehicle propelled by a motor designed or built for off-road use only.

**84 (Motor Scooter)** a light, two-wheeled, open motor vehicle on which the driver sits over an enclosed engine with legs together and feet resting on a floorboard.

**85 (Unenclosed Three Wheel Motorcycle/Unenclosed Autocycle (1 Rear Wheel))** A large motorcycle with three wheels, configured with two front wheels and a saddle with handlebars, or seat(s) and a steering wheel, but not completely enclosed.

**86 (Enclosed Three Wheel Motorcycle/Enclosed Autocycle (1 Rear Wheel))** A large motorcycle with three wheels, configured with two front wheels, a seat(s), and steering wheel and is completely enclosed.

**87 (Unknown Three Wheel Motorcycle Type)** is used when the vehicle is known to be a three-wheel motorcycle, but it is not known if attribute [82 \(Three-wheel Motorcycle \(2 Rear Wheels\)\)](#), [85 \(Unenclosed Three Wheel Motorcycle / Unenclosed Autocycle \(1 Rear Wheel\)\)](#), or [86 \(Enclosed Three Wheel Motorcycle / Enclosed Autocycle \(1 Rear Wheel\)\)](#) applies.

**88 (Other Motored Cycle [mini-bike, pocket motorcycles “pocket bikes”])** is used when the vehicle in question does not qualify for attributes 80-87.

**89 (Unknown Motored Cycle Type)** is used when it is known that the vehicle is a motored cycle, but no further data is available.

**90 (ATV/ATC [All-Terrain Cycle])** is used for off-road recreational vehicles. ATV/ATCs have 3 or 4 wheels, a saddle type seat, and handlebars for steering (no steering wheel). Does not include [96 \(Recreational Off-Highway Vehicles \(ROV\)\)](#) (automobile type seats and steering wheel).

## **OTHER VEHICLES**

Other Vehicles describes all motored vehicles that are designed primarily for off-road use.

**91 (Snowmobile)** refers to a vehicle designed to be operated over snow propelled by a motor.

**92 (Farm Equipment Other Than Trucks)** refers to farming implements other than trucks propelled by a motor (farm tractors, combines, etc.).

**93 (Construction Equipment Other Than Trucks)** refers to construction equipment other than trucks propelled by a motor (bulldozer, road grader, etc.).

**94 (Low speed vehicle (LSV)/Neighborhood Electric Vehicle (NEV))** refers to a vehicle that is designed for travel on secondary roads with speed limits equal to or less than 35 mph. LSVs can sometimes resemble golf carts but differ in that they must adhere to Federal Motor Vehicle Safety Standard (FMVSS) 500. Provisions of FMVSS 500 include the following.

The Vehicle must have:

- Four wheels
- Top speed of at least 20 mph, but it cannot exceed 25 mph
- GVWR less than 3,001 pounds
- Head, turn signal, and tail lamps
- Reflex reflectors
- Parking brake
- Rear view mirrors
- Windshield
- Safety belts
- Seventeen (17) character VIN

**95 (Golf Cart)** is a motor vehicle that is designed and manufactured for operation on a golf course for sporting or recreational purposes. Golf carts or golf cars are different from code [94 \(Low speed vehicle \(LSV\)/ Neighborhood Electric Vehicle \(NEV\)\)](#) in that if they are manufactured to go less than 20 mph, they are not subject to the Federal Motor Vehicle Safety Standard (FMVSS) 500. As a result, golf carts will not have a 17-digit VIN. Golf carts will have a nonstandard serial number that may be reported in the case material. Also, typically golf carts will not have safety features required of LSVs/NEVs under the FMVSS like safety belts, head lights, turn signal and tail lamps, rear view mirrors, etc.

**96 (Recreational Off-Highway Vehicle [ROV])** ROVs are intended to be used on terrain similar to that on which all-terrain vehicles (ATVs) are used. ROVs are distinguished from ATVs by the presence of a steering wheel instead of a handlebar for steering, bench or bucket seats for the driver and passenger(s) instead of straddle seating, and foot controls for throttle and braking instead of levers located on the handlebar. In addition, ROVs have a rollover protective system (ROPS), restraint systems, and a maximum speed greater than 30 mph.

**97 (Other Vehicle Type)** is used when the motorized vehicle in question does not qualify for [93 \(Construction equipment other than trucks\)](#), [92 \(Farm equipment other than trucks\)](#), or [91 \(Snowmobile\)](#). *Examples of Other Vehicle Types are* fork-lifts, city street sweepers, go-karts, “kit” cars, *riding lawn mowers*, etc.

#### **NOT REPORTED AND UNKNOWN BODY TYPE**

**98 (Not Reported)** *Code Not Reported only when NCSA MAKE, NCSA MODEL, NCSA BODY TYPE, and VEHICLE MODEL YEAR are ALL Not Reported. If you have partial information, see [99 \(Unknown Body Type\)](#).*

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “**Not Reported**.”

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Unknown Body Type)** is used when the available information regarding the type of vehicle is reported as Unknown. *If any detail is known regarding the vehicle’s Make/Model/Body/Year, code what is known and then code the other elements as Unknown.*

Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | THEN                                                                                   |

**Definition:** This element captures the completed/finished body class for an [Incomplete Vehicle](#). An incomplete vehicle is completed by a final stage manufacturer. The intent of this data element is to capture the body class for incomplete vehicles when they are finished for road-use.

**Remarks:** SEE ADDITIONAL REMARKS UNDER [VPIC MAKE / VPIC MODEL / VPIC BODY CLASS OVERVIEW](#).

This data element is only applicable to [Incomplete Vehicles](#) under vPIC BODY CLASS. The attributes used for this data element is a subset of the vPIC Body Class. Please refer to the descriptions under vPIC BODY CLASS for detailed information.

*This data element should be coded using all the available sources.*

**000 (Not Applicable)** is used when this vehicle is not an [Incomplete Vehicle](#) under vPIC BODY CLASS. For the completed vehicle or if the VPIC BODY CLASS is Other/Unknown/Not Reported, this field will be automatically populated as Not Applicable after the VPIC BODY CLASS is populated.

**997 Other (Specify:)** is used when the motor vehicle in question does not qualify for any of the above listed body classes. Specify using information on PCR or Vehicle Registration (FARS Only).

*\*Note: For attributes with a “Specify:” designation, a fill-in text box will open in RBIS. This text box should be used to provide additional detail about the attribute selection. Please include a specific reason for this selection.*

**998 (Not Reported)**

*If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”*

*Code 998 (Not Reported) in these two situations:*

- 1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).*
- 2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).*

**999 (Unknown)** is used when the available information on PCR regarding the type of vehicle’s final stage body class is Unknown.

**Consistency Checks** [\(See Section 400\)](#):

## V18 - Power Unit Gross Vehicle Weight Rating

FORMAT: 2 numeric occurring 1 time, 2 numeric occurring 1 time

SAS NAME: Vehicle.GVWR\_From, Vehicle.GVWR\_To, Parkwork.PGVWR\_From, Parkwork.PGVWR\_To

ELEMENT VALUES:

*Subfield 1: GVWR\_From*

*Subfield 2: GVWR\_To*

| Codes | Attributes                                           |
|-------|------------------------------------------------------|
| 11    | Class 1: 6,000 lbs. or less (2,722 kg or less)       |
| 12    | Class 2: 6,001 - 10,000 lbs. (2,722 - 4,536 kg)      |
| 13    | Class 3: 10,001 - 14,000 lbs. (4,536 - 6,350 kg)     |
| 14    | Class 4: 14,001 - 16,000 lbs. (6,350 - 7,258 kg)     |
| 15    | Class 5: 16,001 - 19,500 lbs. (7,258 - 8,845 kg)     |
| 16    | Class 6: 19,501 - 26,000 lbs. (8,845 - 11,794 kg)    |
| 17    | Class 7: 26,001 - 33,000 lbs. (11,794 - 14,969 kg)   |
| 18    | Class 8: 33,001 lbs. and above (14,969 kg and above) |
| 98    | <a href="#"><u>Not Reported</u></a>                  |
| 99    | <a href="#"><u>Reported as Unknown</u></a>           |

**Definition:** This element identifies the range of Gross Vehicle Weight Rating (GVWR) of the power unit as identified by the manufacturer through the vehicle's VIN submission.

**Subfield 1: GVWR\_From:** This field defines the lowest value for the range of the GVWR specified by the manufacturer as recommended loaded weight for a vehicle.

**Subfield 2: GVWR\_To:** This field defines the highest value for the range of the GVWR specified by the manufacturer as recommended loaded weight for a vehicle.

**Remarks:** SEE ADDITIONAL REMARKS in [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

*This data element records the range of the power unit's GVWR. If the power unit's GVWR is within the same range, the GVWR\_From and GVWR\_To values should be coded the same.*

**For Truck/Trailer Combinations:** Be sure to code the POWER UNIT GVWR in this data element and the trailer(s) GVWR in [TRAILER GVWR](#).

*If there is a VIN, GVWR\_From and GVWR\_To are derived from VIN decoding when available. If the value cannot be obtained from VIN decode, use PCR, vehicle registration (FARS Only), or truck and bus supplement (FARS Only) to code this data element.*

**Examples:**

- 10,000 lbs or less: Code GVWR\_From = 11; GVWR\_To = 12.
- 10,001 lbs to 26,000 lbs: Code GVWR\_From = 13; GVWR\_To = 16.
- 26,001 lbs or more: Code GVWR\_From = 17; GVWR\_To = 18.
- 6,001 lbs to 10,000 lbs: Code GVWR\_From = 12; GVWR\_To = 12.
- 33,001 lbs and above: Code GVWR\_From = 18; GVWR\_To = 18.

**98 (Not Reported)**

**Code 98 (Not Reported) in these two situations:**

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material). As an example, if the PCR reports the GCWR for combined power unit and trailer instead of GVWR for power unit, this should be coded as Not Reported
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

*If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."*

**99 (Reported as Unknown) should be used when GVWR information is reported as "Unknown" on your police crash report or truck/bus supplement and the decoded VIN is unable to return a value.**

**Consistency Checks ([See Section 400](#)):**

| Error ID | IF                                                                                                                                        | THEN                                                                                         |

**Definition:** This element identifies whether *this* vehicle had any attached trailing units or was towing another motor vehicle.

**Remarks:** Trailing unit applies to any device connected to a motor vehicle by a hitch, including tractor-trailer combinations, a single-unit truck pulling a trailer (truck trailer), a boat trailer hitched onto a motor vehicle, etc. If the case material does not provide sufficient information if the linkage was fixed or not, consider the linkage as fixed.

A vehicle towing another motor vehicle is not considered to be a trailer but is considered to be a towed vehicle (see [5 \(Vehicle Towing Another Motor Vehicle - Fixed Linkage\)](#) or [6 \(Vehicle Towing Another Motor Vehicle - Non-Fixed Linkage\)](#)). A converter dolly is a device used to hitch a trailer to another semi-trailer or straight truck and is not counted as a separate trailing unit. For combination vehicles (medium/heavy trucks), count only the cargo-carrying units.

**0 (No Trailing Units)** is used when this vehicle was not pulling or towing a wheeled unit.

**1 (One Trailing Unit)** is used when one trailer was being pulled by this vehicle.

**2 (Two Trailing Units)** is used when this vehicle was pulling two trailers.

**3 (Three or More Trailing Units)** is used when this vehicle was pulling three or more trailers.

**4 (Yes, Number of Trailing Units Unknown)** is used when it is known that there was a trailer(s), but the number of trailers cannot be determined.

**5 (Vehicle Towing Another Motor Vehicle - Fixed Linkage)** is used to identify that a vehicle was towing another motor vehicle(s) connected by a fixed linkage. The towed vehicle will have two or more wheels on the ground. This will most commonly apply to drive-away/tow-away tow trucks. These are vehicles equipped with a mechanism designed to be attached to a towed vehicle (e.g., hoist). This attribute would also be used for saddle-mounted towed vehicles. An example

of a saddle-mount unit would be a bobtail towing one or more other bobtails. This attribute does not apply to vehicles towed by being loaded on a flatbed or auto transporter.

**6 (Vehicle Towing Another Motor Vehicle - Non-Fixed Linkage)** is used to identify that a vehicle was towing another motor vehicle(s) connected by a non-fixed linkage. A non-fixed linkage includes ropes, chains, or cables.

**9 (Unknown)** is used when it cannot be determined from any information if a unit was being pulled or towed.

#### FARS SPECIAL INSTRUCTION:

For vehicles being towed by an illegal hitch (rope, chain, cable), use the [022 \(Towing or Pushing Improperly\)](#) in the data element [RELATED FACTORS-DRIVER LEVEL](#).

#### Consistency Checks ([See Section 400](#)):

| *                  | <a href="#">VIN Character Missing or Not Decipherable</a> |

**Definition:** This element records the vehicle identification number (VIN) or alphanumeric identifier in the case material of any trailing units of a combination vehicle.

**Remarks:** *SEE ADDITIONAL REMARKS UNDER [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).*

VINs for the power unit are not coded in this element. See [VEHICLE IDENTIFICATION NUMBER](#) to record the VIN of the power unit.

Code the complete VIN of any trailing units of a combination vehicle (up to three trailing units). The number of VIN fields available to code is system-generated based on the presence of a trailer or trailers in the element [VEHICLE TRAILING](#). For example, if VEHICLE TRAILING equals [0 \(No Trailing Units\)](#), [5 \(Vehicle Towing Another Motor Vehicle - Fixed Linkage\)](#), [6 \(Vehicle Towing Another Motor Vehicle - Non-Fixed Linkage\)](#), or [9 \(Unknown\)](#) then TRAILER VEHICLE IDENTIFICATION NUMBER is auto-filled with **7s (No Trailing Units)**. If VEHICLE TRAILING equals [1 \(One Trailing Unit\)](#) then one TRAILER VEHICLE IDENTIFICATION NUMBER set of 17 alphanumeric characters is available to code and the remaining two are 7-filled by the system.

The VIN is always left-justified.

If the VIN for any trailing unit of a combination vehicle is not available, code [8s \(Not Reported\)](#) here. For example, if a truck tractor semi-trailer combination has no VIN information for the trailer, code [8s \(Not Reported\)](#) in the available field. If a truck tractor double-trailer combination has VIN information for only one of the two trailers, code the known VIN in the first field and [8s \(Not Reported\)](#) in the second TRAILER VEHICLE IDENTIFICATION NUMBER field.

The Vehicle Identification Number (VIN) standards are described in [49 CFR Part 565](#). This standard requires that each VIN have 17 characters, not contain the letter “I,” “O,” or “Q,” and pass a mathematical test (check digit). This data element may also be used to record non-

standard VINs. See instruction under [\*\*\\* \(VIN Character Missing or Not Decipherable\)\*\*](#) for missing or illegible characters.

For a 17-character VIN that produces check digit errors, first attempt to resolve the error. If it cannot be resolved, record the VIN as provided and override any edit checks with explanation. See instruction under [\*\*\\* \(VIN Character Missing or Not Decipherable\)\*\*](#) for missing or illegible characters.

Only enter [\*\*8s \(Not Reported\)\*\*](#) or [\*\*9s \(Reported as Unknown\)\*\*](#) when the entire VIN is missing or reported unknown.

Enter all **0s (No VIN Required)** if the vehicle has a trailer but the trailer is not required to have a VIN as per [49 CFR Part 565](#) Requirements for Trailer Manufacturers. This attribute should only be used for homemade or custom trailers not manufactured for sale to the public.

**NOTE for pre-1981 vehicles:**

If the vehicle is manufactured by the Ford Motor Company and the VIN begins or ends with a script “f,” the script “f” is not entered. Proceed to the next character, as in the example below.

**VIN:** f3U62S100932f

**ENTER:** 3U62S100932

In addition, if any hyphens or periods are contained in the string of alphanumeric characters, ignore them as in the example below.

**VIN:** SM-E.3076421

**ENTER:** SME3076421

**8s (Not Reported) Check to see if 0s (No VIN Required) or 9s (Reported as Unknown) are more appropriate for the situation.**

If a State’s crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered “Not Reported.”

Code **8s (Not Reported)** in these three situations:

1. No field or coding block exists on the State’s crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material), or
2. A field or coding block exists on the State’s crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State’s crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material), or
3. Information on the police crash report has been sanitized/redacted and no other information is available in the case material.

**9s (Reported as Unknown)** is used when the entire trailing unit VIN is reported as Unknown. For example, the police report the vehicle information is unknown for hit-and-run vehicle known to have a trailer(s).

**\* (VIN Character Missing or Not Decipherable)** is used for any VIN character(s) that is (are) missing or not decipherable and the correct character(s) cannot be identified to resolve the VIN for the specific position(s).

**Notes regarding VINs with less than 17 digits:**

- Some vehicles (e.g., custom, pre-1981, imported, or rebuilt vehicles) may have been assigned identification numbers that are less than 17 digits. These should be entered as reported. Do not fill the remaining positions with asterisks “\*.” For example, 8675309.
- If a VIN is reported as less than 17 digits for a vehicle that would normally have 17 digits, and all characters are legible, fill with asterisks “\*” at the end for the missing character(s). For example, 558MEBM23FB\*\*\*\*\*.

**FARS SPECIAL INSTRUCTION:**

If the State will not allow transmittal of a complete standard VIN, code the right-most four characters with asterisks “\*.” The vehicle registration file must be used to verify the VIN.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                    | <b>THEN</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>VP79</b>     | <b>VEHICLE TRAILING equals 1,</b>                                                                       | <b>TRAILER VEHICLE IDENTIFICATION NUMBER must equal 7s for only two sets.</b>                                                                           |
| <b>VP80</b>     | <b>VEHICLE TRAILING equals 2,</b>                                                                       | <b>TRAILER VEHICLE IDENTIFICATION NUMBER must equal 7s for only one set.</b>                                                                            |
| <b>VP81</b>     | <b>VEHICLE TRAILING equals 3,</b>                                                                       | <b>TRAILER VEHICLE IDENTIFICATION NUMBER must not equal to 7s for any set.</b>                                                                          |

## V21 - Trailer Gross Vehicle Weight Rating

FORMAT: 3 sets, 2 alphanumeric

SAS NAME: Vehicle.TRLR1GVWR, Vehicle.TRLR2GVWR, Vehicle.TRLR3GVWR, Parkwork.PTRLR1GVWR, Parkwork.PTRLR2GVWR, Parkwork.PTRLR3GVWR

ELEMENT VALUES:

| Codes | Attributes                                           |
|-------|------------------------------------------------------|
| 00    | <a href="#"><u>No Trailer GVWR Required</u></a>      |
| 11    | Class 1: 6,000 lbs. or less (2,722 kg or less)       |
| 12    | Class 2: 6,001 - 10,000 lbs. (2,722 - 4,536 kg)      |
| 13    | Class 3: 10,001 - 14,000 lbs. (4,536 - 6,350 kg)     |
| 14    | Class 4: 14,001 - 16,000 lbs. (6,350 - 7,258 kg)     |
| 15    | Class 5: 16,001 - 19,500 lbs. (7,258 - 8,845 kg)     |
| 16    | Class 6: 19,501 - 26,000 lbs. (8,845 - 11,794 kg)    |
| 17    | Class 7: 26,001 - 33,000 lbs. (11,794 - 14,969 kg)   |
| 18    | Class 8: 33,001 lbs. and above (14,969 kg and above) |
| 77    | <a href="#"><u>No Trailing Units</u></a>             |
| 98    | <a href="#"><u>Not Reported</u></a>                  |
| 99    | <a href="#"><u>Reported as Unknown</u></a>           |

**Definition:** This element identifies the GVWR of a trailing unit as identified by the manufacturer in the vehicle's VIN.

**Remarks:** SEE ADDITIONAL INFORMATION IN [vPIC MAKE / vPIC MODEL / vPIC BODY CLASS OVERVIEW](#).

**TRAILER GVWR** records the applicable weight range for the trailing unit's GVWR.

If you have the trailer VIN, decode the VIN to obtain the GVWR information.

GVWR is the value specified by the manufacturer as the recommended maximum loaded weight of a trailer. If your State records the GVWR of the power unit and trailer(s) in separate fields, be sure to capture the GVWR of trailers in this element.

00 (No Trailer GVWR Required) should be used if the vehicle has a trailer but the trailer is not required to have a VIN as per [49 CFR Part 565](#) Requirements for Trailer Manufacturers. This attribute should only be used for homemade or custom trailers not manufactured for sale to the public.

77 (No Trailing Units) should be used if the vehicle has no trailing units. This is populated by the RBIS application based on the coding of the VEHICLE TRAILING data element.

## 98 (Not Reported)

*Code 98 (Not Reported) in these two situations:*

1. *No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).*
2. *A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).*

*If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."*

*99 (Reported as Unknown) should be used when GVWR information is reported as "Unknown" on your police crash report or truck/bus supplement and the decoded VIN is unable to return a value.*

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                               | <b>THEN</b>                          |
|-----------------|-------------------------------------------------------------------------|--------------------------------------|
| VP73            | UNLIKELY: TRAILER GVWR equals 0s for any of the three sets.             | --                                   |
| VP74            | TRAILER VEHICLE IDENTIFICATION NUMBER equals 7s,                        | TRAILER GVWR must equal 77.          |
| VP75            | TRAILER VEHICLE IDENTIFICATION NUMBER equals 0s,                        | TRAILER GVWR must equal 00.          |
| VP76            | TRAILER VEHICLE IDENTIFICATION NUMBER equals 8s,                        | TRAILER GVWR should equal 98.        |
| VP77            | TRAILER VEHICLE IDENTIFICATION NUMBER equals 9s,                        | TRAILER GVWR should equal 99.        |
| VP78            | TRAILER VEHICLE IDENTIFICATION NUMBER is not equal to 0s, 7s, 8s or 9s, | TRAILER GVWR must equal 11-18 or 98. |

## V22 - Jackknife

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.J\_KNIFE

**ELEMENT VALUES:**

| Codes | Attributes                                 |
|-------|--------------------------------------------|
| 0     | <a href="#">Not an Articulated Vehicle</a> |
| 1     | <a href="#">No</a>                         |
| 2     | <a href="#">Yes - First Event</a>          |
| 3     | <a href="#">Yes - Subsequent Event</a>     |

**Definition:** This element identifies if this vehicle experienced a “jackknife” anytime during the unstabilized situation.

**Remarks:** A jackknife can occur at any time during the crash sequence. This element is applicable for all power unit/trailing unit combinations (truck tractor or single-unit truck with one or more trailers, articulated bus, car pulling a boat on a trailer, light utility vehicle/trailing unit combination, etc.).

Jackknife applies to a condition that occurs to an articulated vehicle; any vehicle with a trailing unit connected by a hitch (fixed linkage) while in motion. A jackknife occurs when there is an uncontrolled articulation between the power unit and the trailing unit in which the trailing unit does not follow directly behind the power unit (tracking), and the driver did not initiate the non-tracking situation. The condition reflects a loss of control of the vehicle by the driver in which the trailing units’ normal straight-line path behind the power unit is not maintained.

If the final resting configuration of the vehicle in the police crash report diagram is in a jackknife position, it does not necessarily mean that the vehicle has jackknifed. Turning and backing are examples of driver initiated non-tracking-controlled articulation and are not coded as a jackknife.

In the case material, the terms “tractor jackknife” or “trailer swing” may be used to describe particular incidences of uncontrolled articulation. Either incident shall be coded as JACKKNIFE.

A jackknife is not likely to be a harmful event but may be part of an unstabilized condition just before the [FIRST HARMFUL EVENT](#).

**0 (Not an Articulated Vehicle)** is used when this vehicle is not a vehicle-trailing unit combination. This attribute can also be used when coding a hit-and-run vehicle when there is not an indication in the case material that the hit-and-run vehicle had a trailer.

**1 (No)** is used when no uncontrolled articulation was reported between a vehicle and a trailing unit.

**2 (Yes - First Event)** is used when an uncontrolled articulation was reported as occurring before or as part of the first injury or damage producing event for this vehicle.

**3 (Yes - Subsequent Event)** is used when an uncontrolled articulation occurs after the first injury or damage producing event for this vehicle.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                         | <b>THEN</b>                                                                                                       |
|-----------------|-----------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 2B0P            | JACKKNIFE equals 1-3,             | VEHICLE TRAILING must not equal 0, 9.                                                                             |
| 3B0P            | JACKKNIFE equals 2, 3,            | TRAVEL SPEED must not equal 000.                                                                                  |
| 5B0Q            | JACKKNIFE equals 0,               | VEHICLE TRAILING must equal 0, 5, 6, or 9.                                                                        |
| 7B0F            | JACKKNIFE equals 2, 3,            | DRIVER PRESENCE must equal 1.                                                                                     |
| AK00            | CARGO BODY TYPE equals 22, 96,    | JACKKNIFE should equal 0.                                                                                         |
| AL8P            | SEQUENCE OF EVENTS equals 51, 70, | JACKKNIFE must equal 2, 3.                                                                                        |
| CI0P            | VEHICLE TRAILING equals 1-4,      | JACKKNIFE must not equal 0.                                                                                       |
| V538            | JACKKNIFE equals 2,               | PRE-EVENT MOVEMENT (PRIOR TO RECOGNITION OF CRITICAL EVENT) must not equal 04, 05, 07-09, or 13 for this vehicle. |
| VH70            | UNIT TYPE equals 2-4,             | elements JACKKNIFE, TRAVEL SPEED, AND SEQUENCE OF EVENTS must all be left blank.                                  |

## V23 - Motor Carrier Identification Number

**FORMAT:** 1 set 2 numeric, 1 set 9 alphanumeric

**SAS NAME:** Vehicle.MCARR\_ID, Parkwork.PMCARR\_ID, Vehicle.MCARR\_I1, Parkwork.PMCARR\_I1, Vehicle.MCARR\_I2, Parkwork.PMCARR\_I2

### ELEMENT VALUES:

#### Issuing Authority:

| Codes | Attributes                     |
|-------|--------------------------------|
| 00    | <a href="#">Not Applicable</a> |
| 01-56 | <a href="#">State Code</a>     |
| 57    | <a href="#">US DOT</a>         |
| 58    | <a href="#">MC/MX (ICC)</a>    |
| 95    | <a href="#">Canada</a>         |
| 96    | <a href="#">Mexico</a>         |
| 88    | <a href="#">None</a>           |
| 77    | <a href="#">Not Reported</a>   |
| 99    | <a href="#">Unknown</a>        |

#### Identification Number:

| Codes | Attributes     |
|-------|----------------|
| --    | Actual Number  |
| 0s    | Not Applicable |
| 8s    | None           |
| 7s    | Not Reported   |
| 9s    | <b>Unknown</b> |

**Definition:** This element records the issuing authority and motor carrier identification number if applicable to this vehicle.

**Remarks:** The motor carrier identification number is recorded on the truck supplement or police crash report next to the appropriate Source (Issuing Authority). This information should be available on your police crash report or truck and bus supplement with other elements required by the Federal Motor Carrier Safety Administration (FMCSA). *See the [Coding Guide: Qualifying Vehicles for Elements V23-V25](#) for helpful information.*

**The following are qualifying motor vehicles for this data element:**

1. A **vehicle** pulling a trailer with gross combination weight rating (GCWR) greater than 10,000 lbs.
2. A **single vehicle with a** GVWR greater than 10,000 lbs.
3. A Vehicle with 9 or more seats (including the driver).
4. A Vehicle displaying a hazardous materials placard.

**00/0s (Not Applicable)** is used when none of the qualifying criteria above apply to this vehicle. When this attribute is used, **VEHICLE CONFIGURATION** and **CARGO BODY TYPE** must also be Not Applicable.

#### **FARS SPECIAL INSTRUCTION:**

***If your State uses separate truck/bus supplements, you should seek help to get routine access to them, just as with your State's police crash report. Your State's SAFETynet representative may be able to provide a Motor Carrier Identification Number.***

Federal regulations require that almost all commercial trucks/buses operating across State lines that meet the above criteria (i.e., interstate) have identification numbers except those hauling "exempt" commodities (such as unprocessed agricultural products). This will be a U.S. DOT or MC/MX (ICC) number. Some States issue "Intrastate" motor carriers a State number that can also be recorded here.

**Identification Number should be left justified.** If less than 9 characters, left-justify and do not zero-fill.

*Figure 13: Examples of Left-Justified Coding of Motor Carrier Identification Number*

**Note:** Many carriers will have a U.S. DOT or MC/MX (ICC) number plus a State number.

**HIERARCHY:** When identification numbers are available from more than one Source (Issuing Authority), it is most important to code the U.S. DOT number, then the MC/MX (ICC) number if one is available. It is next most important to code the Mexican or Canadian issued number. Finally, State-issued numbers should be coded.

**57 (US DOT NUMBERS):** U.S. DOT is used in "Issuing Authority" if a U.S. DOT Number or a State Number and U.S. DOT Number are recorded on the police crash report or Supplement. Enter the U.S. DOT Number in "Identification Number."

- U.S. DOT Numbers are in the process of being assigned to Intrastate motor carriers in a number of States. These should include the issuing State's two-character abbreviation on the end; e.g., U.S. DOT 123456XX (where "XX" is the State abbreviation). See example of proper coding in [Figure 13](#).

**58 (MC/MX (ICC) NUMBERS):** MC/MX (ICC) is used in "Issuing Authority" if an MC/MX (ICC) number or a State Number and an MC/MX (ICC) Number are recorded on the police crash report or supplement. Enter the MC/MX (ICC) Number in "Identification Number."

**STATE NUMBERS:** If only a State Number is recorded on the police crash report or Supplement, then code the appropriate FARS State Code in "Issuing Authority" and enter the State Number in "Identification Number."

State Numbers are issued by a public utility commission, a public service commission, or some other State agency, to vehicles that operate either in interstate commerce or only within that State. However, some States do not regulate the motor carrier industry. Trucks and buses that operate strictly within such States (i.e., intrastate) may not have numbers.

**CANADIAN/MEXICAN NUMBERS:** Use attributes "95" or "96" in "Issuing Authority" if a Canadian or Mexican authority (respectively) has issued the only Carrier Identification Number recorded on the police crash report or Supplement.

**88/8s (None)** is used when you would expect this type of vehicle to have an ID Number because the qualifying criteria above apply to this vehicle, but there is no Motor Carrier Identification number to record or the case material states "No Number." This can occur because the vehicle is not properly marked or because its use or activity at the time of the crash does not require it to have a number. Examples of vehicles that may not require a number include construction or farm equipment, vehicles operated strictly intrastate in a State that does not regulate intrastate carriers, government owned/operated vehicles, and personal use vehicles (i.e., non-commercial).

**99/9s (Unknown)** is used if:

- the investigating officer *indicates that* the MOTOR CARRIER IDENTIFICATION NUMBER *is* unknown; *and*
- the [NCSA BODY TYPE](#) of the vehicle is unknown *or not reported; or*
- *it cannot be determined if the vehicle qualifies for this data element (e.g., a light pickup truck pulling a trailer where the GCWR is not known).*

*When this attribute is used, [VEHICLE CONFIGURATION](#) and [CARGO BODY TYPE](#) should also be Unknown. However, it is possible that the officer may know the VEHICLE CONFIGURATION and/or CARGO BODY TYPE but report the MOTOR CARRIER IDENTIFICATION NUMBER as unknown (e.g., hit-and-run truck tractor semi-trailer).*

**77/7s (Not Reported)** For this element, Not Reported is used when the qualifying criteria above DO apply to this vehicle but [88/8s \(None\)](#) does not apply, and:

- *the police crash report or truck supplement leaves the identification number field blank; or*
- *the officer did not complete a supplement or a field on the police crash report (no further information given).*

**Check to see if 00/0s (Not Applicable), 88/8s (None), or 99/9s (Unknown) are more appropriate for the situation.**

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code 77/7s (**Not Reported**) in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Consistency Checks (See Section 400):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                               | <b>THEN</b>                                                                                                                                                            |

**Definition:** This element identifies the general configuration of this vehicle when applicable.

**Remarks:** This information should be available on your police crash report or truck and bus supplement with other elements required by the Federal Motor Carrier Safety Administration (FMCSA).

In some States, the data element VEHICLE CONFIGURATION or its attributes may appear under another title, such as: Unit Type, Vehicle Type, Type of Unit, etc. In many States, Vehicle Configuration is recorded for all vehicles. *See the [Coding Guide: Qualifying Vehicles for Elements V23-V25](#) for helpful information.*

***The following are qualifying motor vehicles for this data element:***

1. **A vehicle** pulling a trailer with gross combination weight rating (GCWR) greater than 10,000 lbs.
2. **A single vehicle with a** GVWR greater than 10,000 lbs.
3. **A Vehicle** with 9 or more seats (including the driver).
4. **A Vehicle** displaying a hazardous materials placard.

**00 (Not Applicable)** is used when none of the qualifying criteria above apply to this vehicle. When this attribute is used, [MOTOR CARRIER IDENTIFICATION NUMBER](#) and [CARGO BODY TYPE](#) must also be Not Applicable.

**10 (Vehicle 10,000 Pounds or Less Placarded for Hazardous Materials)** is used for light vehicles (10,000 lbs or less) with at least one hazardous cargo placard displayed. When vehicles in this category are not displaying a hazardous materials placard, use **00 (Not Applicable)**.

**01 (Single-Unit Truck [2-axle and GVWR more than 10,000 lbs.])** is a power unit that includes a permanently mounted cargo body (also called a straight truck) that has only two axles and a GVWR of over 10,000 lbs. This attribute includes pickup trucks without a trailer with a GVWR of over 10,000 lbs. This also includes single-unit trucks towing other vehicles where the towed vehicle has at least two wheels on the ground. (See [CARGO BODY TYPE](#) attribute **12 (Vehicle Towing Another Motor Vehicle)**).

**02 (Single-Unit Truck [3 or more axles])** is a power unit that includes a permanently mounted cargo body (also called a straight truck) that has three or more axles. When counting axles on a single-unit truck, include raised axles. This also includes single-unit trucks towing other vehicles where the towed vehicle has at least two wheels on the ground. (See [CARGO BODY TYPE](#) attribute **12 (Vehicle Towing Another Motor Vehicle)**).

**04 (Truck Pulling Trailer[s])** is used for single-unit trucks pulling a trailer. This attribute includes a pickup truck pulling a trailer with a GCWR of over 10,000 lbs.

**05 (Truck Tractor [Bobtail])** is a motor vehicle consisting of a single motorized transport device designed primarily for pulling semi-trailers (e.g., cab only). These vehicles are sometimes referred to as a “bobtail.” This also includes truck tractors towing other truck tractors in a saddlemount towing position or towing other vehicles where the towed vehicle has at least two wheels on the ground. (See [CARGO BODY TYPE](#) attribute **12 (Vehicle Towing Another Motor Vehicle)**).

**06 (Truck Tractor/Semi-Trailer)** is used for a truck tractor pulling one trailer. This attribute should not be used for single-unit trucks pulling a trailer.

**07 (Truck Tractor/Double)** is used for a truck tractor pulling two trailers.

**08 (Truck Tractor/Triple)** is used for a truck tractor pulling three trailers.

**19 (Truck More Than 10,000 lbs., Cannot Classify)** is used when the vehicle *qualifies for this data element by weight*, but the above attributes do not apply. Examples would include motor homes, construction or farm equipment such as a bulldozer, crane, backhoe, combine, farm tractor, etc. *If the VEHICLE CONFIGURATION is Unknown, see [99 \(Unknown\)](#).*

**20 (Bus/Large Van [seats for 9-15 people, including driver])** is used for smaller van-based buses (less than 16 seats, including driver). Examples include commuter vans and van-based school buses. This attribute would include a limousine with seating capacity in this range.

**21 (Bus [seats for more than 15 occupants, including driver])**. A van-based bus qualifies for this attribute if it is configured to include enough seats. A CDL is required for the driver of this bus. This attribute would include a limousine with seating capacity in this range.

**99 (Unknown)** is used if:

- the investigating officer indicates that the **VEHICLE CONFIGURATION** is unknown;
- *a specific **VEHICLE CONFIGURATION** cannot be identified for a qualifying vehicle (e.g., known bus with unknown seating; known M/H truck with unknown number of axles; a vehicle with one trailer, but it is unknown whether it is a truck tractor semi-trailer or a single-unit truck pulling a trailer, etc.), and*
- the [\*\*NCSA BODY TYPE\*\*](#) of the vehicle is unknown *or not reported, or*
- *when it cannot be determined if the vehicle qualifies for this data element (e.g., a light pickup truck pulling a trailer where the GCWR is not known).*

When this attribute is used, [\*\*MOTOR CARRIER IDENTIFICATION NUMBER\*\*](#) and [\*\*CARGO BODY TYPE\*\*](#) should also be Unknown.

Consistency Checks ([See Section 400](#)):

**Definition:** This element identifies the primary cargo carrying capability of this vehicle when applicable.

**Remarks:** This information should be available on the or truck and bus supplement with other elements required by the FMCSA. *See the [Coding Guide: Qualifying Vehicles for Elements V23-V25](#) for helpful information.*

***The following are qualifying motor vehicles for this data element:***

1. **A vehicle** pulling a trailer with GCWR greater than 10,000 lbs.
2. **A single vehicle with a** GVWR greater than 10,000 lbs.
3. **A Vehicle** with 9 or more seats (including the driver).
4. **A Vehicle** displaying a hazardous materials placard.

**00 (Not Applicable [N/A])** is used when none of the qualifying criteria above apply to this vehicle. When this attribute is used, **MOTOR CARRIER IDENTIFICATION NUMBER** and **VEHICLE CONFIGURATION** must also be Not Applicable.

**NOTE:** For truck/trailer vehicle configurations where the power unit and trailer have different cargo body types, code the **CARGO BODY TYPE** of the power unit. For example, a dump truck pulling a flatbed trailer should be coded as **04 (Dump)**.

For truck/trailer vehicle configurations where the power unit's **CARGO BODY TYPE** would be coded **96 (No Cargo Body Type)** or **97 (Other)**, code the cargo body of the trailer. For example, a dual rear-wheel pickup truck pulling a flatbed trailer should be coded as **03 (Flatbed)**.

**01 (Van/Enclosed Box)** is a single-unit truck, truck/trailer, or truck tractor/semi-trailer having an enclosed body integral to the frame of the motor vehicle (e.g., enclosed trailers, enclosed cargo vans, and ambulances).

**03 (Flatbed)** is used when the available information refers to a cargo body without sides or roof, with or without readily removable stakes that may be tied together with chains/slats or panels. This includes “stake trucks.”

**04 (Dump)** is used when the available information refers to a cargo body designed to be tilted to discharge its load by gravity.

**06 (Auto Transporter)** is used when the available information refers to a cargo body capable of transporting multiple, fully assembled automobiles on an “auto transporter” trailer. Do not use this code for flatbeds transporting vehicles (e.g., flatbed tow truck or flatbed semi-trailer carrying wrecked/salvaged automobiles).

**07 (Garbage/Refuse)** is used when the available information refers to a cargo body that is specifically designed to collect and transport garbage and refuse. This includes both conventional rear-loading and over-the-top bucket loading garbage trucks. Also included are recycle trucks and roll-off style garbage trucks.

**08 (Grain/Chips/Gravel)** is used when the available information refers to trucks that discharge their loads by gravity from the bottom (i.e., belly dump).

**09 (Pole-Trailer)** is used when the available information refers to a cargo body type that consists of a trailer designed to be attached to a towing vehicle by a reach or pole or by being boomed and secured to the towing vehicle. These are ordinarily used to carry property of a long or irregular shape, such as telephone poles. The pole trailer extends or retracts to accommodate varying lengths of cargo.

**10 (Log)** is used when the available information refers to a cargo body type with a fixed middle beam and side support posts specifically designed for carrying logs. This includes single-unit log trucks.

**09 (Pole-Trailer)** and **10 (Log)** may be listed on a police crash report as “Pole/Log.” If the trailer can telescope to carry different log lengths, then it should be considered a **09 (Pole-Trailer)**.

**11 (Intermodal Container Chassis)** is used when the available information refers to a cargo body type used for a trailer specifically designed to have a rail or ship container mounted directly

on the chassis. These should not be confused with van/enclosed box cargo body types. Intermodal containers may also be mounted on a flatbed trailer, in which case [03 \(Flatbed\)](#) is the CARGO BODY TYPE.

**12 (Vehicle Towing Another Motor Vehicle)** is used when the available information refers to vehicles that have no cargo carrying capability but are in the act of towing another motor vehicle where the towed vehicle has at least two wheels on the ground. These are often called “drive-away, tow-aways” and will be applicable to tow trucks and specially rigged truck tractors. This includes “saddlemount” configurations. Does not apply to vehicles “towed” by being loaded on a flatbed or auto transporter.

**22 (Bus)** is a motor vehicle with seating for transporting nine or more people, including the driver. This attribute would include a limousine with sufficient seating capacity to qualify as a bus.

**96 (No Cargo Body Type)** is used for any medium/heavy truck with no cargo carrying capability (bobtail); a truck chassis with a cab only (stripped chassis); and light trucks and passenger vehicles displaying a hazardous materials placard. Other examples of **96 (No Cargo Body Type)** would be sign trucks, fire trucks, tow trucks, construction or farm equipment, etc.

**97 (Other)** is used when the CARGO BODY TYPE is other than the body types listed above. This includes pickups greater than 10,000 lbs without a trailer. If a pickup is pulling a trailer, code the CARGO BODY TYPE of the attached trailer instead of the CARGO BODY TYPE of the pickup. This attribute would also include motor homes.

**98 (Unknown Cargo Body Type)** is used when the vehicle qualifies for this data element, but the CARGO BODY TYPE is not known or when there is not enough information to distinguish one CARGO BODY TYPE from another. An example would be contradictory data on whether the truck is a van/enclosed box or a flatbed.

**99 (Unknown)** is used *when*:

- the [NCSA BODY TYPE](#) of the vehicle is unknown or not reported; or
- it cannot be determined if the vehicle qualifies for this data element (e.g., a light pickup truck pulling a trailer where the GCWR is not known).

*When this attribute is used, [MOTOR CARRIER IDENTIFICATION NUMBER](#) and [VEHICLE CONFIGURATION](#) should also be Unknown.*

Consistency Checks [\(See Section 400\)](#):

## V26 - Hazardous Materials Involvement / Placard

**FORMAT:** 1 set, 1 numeric; 1 set, 1 numeric; 1 set, 4 numeric; 1 set, 2 numeric; 1 set, 1 numeric

**SAS NAME:** Vehicle.HAZ\_INV, Vehicle.HAZ\_PLAC, Vehicle.HAZ\_ID, Vehicle.HAZ\_CNO, Vehicle.HAZ\_REL, Parkwork.PHAZ\_INV, Parkwork.PHAZPLAC, Parkwork.PHAZ\_ID, Parkwork.PHAZ\_CNO, Parkwork.PHAZ\_REL

### ELEMENT VALUES:

#### HM1: Hazardous Materials Involvement

| Codes | Attributes          |
|-------|---------------------|
| 1     | <a href="#">No</a>  |
| 2     | <a href="#">Yes</a> |

#### HM2: Placard (Did This Motor Vehicle Display a Hazardous Material (HM) Placard?)

| Codes | Attributes                     |
|-------|--------------------------------|
| 0     | <a href="#">Not Applicable</a> |
| 1     | <a href="#">No</a>             |
| 2     | <a href="#">Yes</a>            |
| 8     | <a href="#">Not Reported</a>   |

#### HM3: 4-digit Hazardous Material Identification Number

| Codes | Attributes                            |
|-------|---------------------------------------|
| 0000  | <a href="#">Not Applicable</a>        |
|       | <a href="#">Actual 4-Digit Number</a> |
| 8888  | <a href="#">Not Reported</a>          |

#### HM4: 2-digit Hazardous Material Class Number

| Codes | Attributes                                                |
|-------|-----------------------------------------------------------|
| 00    | <a href="#">Not Applicable</a>                            |
| 01-09 | <a href="#">Actual 1-Digit Number</a> (with leading zero) |
| 88    | <a href="#">Not Reported</a>                              |

### HM5: Release of Hazardous Material from the Cargo Compartment

| Codes | Attributes                     |
|-------|--------------------------------|
| 0     | <a href="#">Not Applicable</a> |
| 1     | <a href="#">No</a>             |
| 2     | <a href="#">Yes</a>            |
| 8     | <a href="#">Not Reported</a>   |

**Definition:** This element identifies the presence of hazardous cargo for this vehicle and records information about the hazardous cargo when present.

**Remarks:** This element must be coded for all vehicles.

Placard and Hazardous Materials Released information should be available on your police crash report or truck and bus supplement with other elements required by the FMCSA for commercial vehicles.

Hazardous Material is a substance or material that has been designated by the U.S. Department of Transportation, or other authorizing entity, as capable of posing an unreasonable risk to health, safety, and property when transported in commerce. Any motor vehicle transporting hazardous materials in quantities above the thresholds established by the U.S. Department of Transportation, or other authorized entity, is required to display a hazardous materials placard.

**Exclusions:**

- Fuel or oil carried by the vehicle for its own use.

**Hazardous Materials Placard:** is a sign required to be affixed to any motor vehicle transporting hazardous materials in quantities above the thresholds established by the U.S. Department of Transportation, or other authorized entity. This placard identifies the 1-digit hazard class division number, 4-digit hazardous material identification number, or name of the hazardous material being transported.

Vehicle transporting hazardous materials should have a diamond-shaped placard affixed indicating the material carried. (See [Figure 14](#) below.)

### ***HM1 - Hazardous Materials Involvement***

**Definition:** This element indicates whether the vehicle was carrying hazardous materials - involvement.

**1 (No)** is used when there is no indication of hazardous materials for this vehicle in the case material. For cases involving a hit-and-run, the default is **1 (No)** when no details are reported regarding the hit-and-run vehicle.

If HM1 is **1 (No)**, HM2-HM5 will be coded **0s (Not Applicable)**.

**2 (Yes)** is used when hazardous materials were indicated for this vehicle in the case material.

Examples for code 2 (Yes):

1. The officer records any information about a placard, whether he indicates that the vehicle was carrying hazardous materials or not.
2. The officer does not record any information about a placard; however, you know that hazardous material was involved.
3. Information identifying hazardous material is blank, but you know that hazardous material was released.

## **HM2 - Hazardous Materials Placard**

**Definition:** This element indicates the presence of hazardous materials and whether the vehicle displayed a hazardous materials placard.

**0 (Not Applicable)** is used when there is no indication of hazardous materials for this vehicle in the case material (HM1 equals [1 \(No\)](#)).

**1 (No)** is used when hazardous materials are involved, but the officer indicates there was no placard.

**2 (Yes)** is used when hazardous materials are involved, and the vehicle does have a placard.

**8 (Not Reported)** is used when hazardous materials are involved, but the crash report does not record any information about the presence of a placard. *Check to see if [0 \(Not Applicable\)](#) is more appropriate for the situation.*

## **HM3 - 4-Digit Hazardous Materials Identification Number**

**Definition:** This element indicates the 4-digit identification number.

**0000 (Not Applicable)** - No indication of hazardous materials for this vehicle in the case material (HM1 equals [1 \(No\)](#)).

**Actual 4-digit Number** - Record the 4-digit Hazardous Materials Identification Number reported in the case material.

**8888 (Not Reported)** - Hazardous materials involved, but the 4-digit number was not recorded, or this field is not available on your crash report. If you are provided the name of the hazardous material on your report but not the 4-digit number, use this attribute and be sure to record the 1-digit class number, if it is provided, in HM4. *Check to see if [0000 \(Not Applicable\)](#) is more appropriate for the situation.*

## **HM4 - 2-Digit Hazardous Materials Class Number**

**Definition:** This element indicates the single-digit hazardous material class number for the vehicle.

**00 (Not Applicable)** - No indication of hazardous materials for this vehicle in the case material (HM1 equals [1 \(No\)](#)).

**Actual 2-digit Class Number (01-09)** - Record the 1-digit Hazardous Materials Class Number recorded on your crash report with a leading zero (e.g., if the 1-digit class number is 5, enter

“05”). If you were given a two-digit number with decimal point, record only the first digit with a leading zero (e.g., if the class number is “1.3” you should record “01”). See [Figure 14](#).

**88 (Not Reported)** - Hazardous Materials involved, but the 1-digit number was not recorded, or this field is not available in the crash materials. *Check to see if [00 \(Not Applicable\)](#) is more appropriate for the situation.*

### ***HM5 - Release of Hazardous Materials from Cargo Compartment***

**Definition:** This element indicates whether or not any hazardous cargo was released from the cargo tank or compartment.

**0 (Not Applicable)** - No indication of hazardous materials for this vehicle in the case material (HM1 equals

[1 \(No\)](#)).

**1 (No)** - Hazardous Materials involved, and the officer indicates there was no release of the material(s) from the cargo compartment.

**2 (Yes)** - Hazardous Materials involved, and the officer indicates there was a release of the material(s) from the cargo compartment.

**8 (Not Reported)** - Hazardous Materials involved, and you can't determine from the crash materials whether hazardous material was released from the cargo compartment or not. *Check to see if [0 \(Not Applicable\)](#) is more appropriate for the situation.*

Do not include fuel or oil carried by the vehicle for its own use that has been released.

### ***Guideline for recording multiple hazardous materials:***

- If the case has a hazmat spill and you know which material was released, always record that material.
- If you were to get two hazardous materials reported of different classes (1-9), report the material from DOT Hazmat Table 1 and its associated 4-digit UN number over materials in Table 2. Table 1 includes Hazard Class or Divisions: 1.1, 1.2, 1.3, 2.3, 4.3, 5.2, 6.1, 7.
- If you have two materials of the same class (e.g., both class 8 - Corrosive) report the material in greatest quantity if you have the information. If not, report the material that is listed first on the report.

**Any transport vehicle containing any quantity of the following classes of material must be placarded:**

- Explosives (1.1, 1.2, 1.3)
- Poison Gas
- Materials Dangerous When Wet
- Poison
- Radioactive

Any transport vehicle containing over 1,001 lbs or more (gross weight) of the following classes of materials must be placarded:

- Explosives (1.4, 1.5, 1.6)
- Flammable and Non-Flammable Gas
- Flammable/Combustible Liquid (gasoline, fuel oil)
- Flammable Solid/Spontaneously Combustible
- Oxidizer/Organic Peroxide
- Poison
- Radioactive
- Corrosive
- Other (A material that presents a hazard during transportation that is not included in any other hazard class)

Figure 14: Nine Classes of Hazardous Materials

#### Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                               | THEN                                                                                                                                                            |

## V27 - Bus Use

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.BUS\_USE, Parkwork.PBUS\_USE

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 00    | <a href="#">Not a Bus</a>                         |
| 01    | <a href="#">School</a>                            |
| 04    | <a href="#">Intercity</a>                         |
| 05    | <a href="#">Charter/Tour</a>                      |
| 06    | <a href="#">Transit/Commuter</a>                  |
| 07    | <a href="#">Shuttle</a>                           |
| 08    | <a href="#">Modified for Personal/Private Use</a> |
| 98    | <a href="#">Not Reported</a>                      |
| 99    | <a href="#">Reported as Unknown</a>               |

**Definition:** This data element describes the common type of bus service this vehicle was being used for at the time of the crash or the primary use for the bus if not in service at the time of the crash.

**Remarks:** Buses are any motor vehicle with seats to transport nine or more people, including the driver's seat. This element does not include vans that are owned and operated for personal use.

**00 (Not a Bus)** This should be used for vehicles with less than nine seats (including the driver), personal-use vans with nine or more seats (including the driver), and for vehicles that do not have a bus body type **AND** are not being used as a bus in the crash.

**01 (School)** is used for vehicles that meet the definition of a bus and are being used by a public or private school or district, or contracted carrier operation on behalf of the entity, providing transport for school children (up to the 12th grade) to/from school (public or private), or any other school function or activity.

In most cases, the decision to use this code will be based on a reference to the vehicle as a school bus in the case material. In this situation, assume the criteria are met unless it is otherwise stated in the case material.

In addition, **01 (School)** includes buses that are not externally identifiable as a school/pupil transport vehicle. For example, a transit bus, at the time of the crash, used exclusively (no other passengers except students) to transport students to/from the school or school-related activity.

**04 (Intercity)** is used when a company provides for-hire, long-distance passenger transportation between cities over fixed routes with regular schedules (e.g., Greyhound bus service between major cities).

**05 (Charter/Tour)** is used when a company provides transportation on a for-hire basis and demand-response basis, usually round-trip service for a tour group or outing.

**06 (Transit/Commuter)** is used for a government entity or private company that provides passenger transportation over fixed, scheduled routes, within primarily urban geographical areas. (For example, inner-city mass transit bus/van service.)

**07 (Shuttle)** is used when private companies provide transportation services for their own employees, non-governmental organizations (such as churches and non-profit groups), and non-educational units of government (such as departments of corrections). (Examples include buses/nine-passenger vans transporting people from airports, hotels, rental car companies, and business facility to facility.)

**08 (Modified for Personal/Private Use)** is used when a bus body type has been modified for personal or private use. For example, a bus with seats removed and exterior altered to allow for personal/private hauling of cargo (instead of passengers). Also includes musical groups in cross-country bus with interior remodeled with home-like conveniences.

**98 (Not Reported)** *Check to see if 00 (Not a Bus) or 99 (Reported as Unknown) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used if the information about this vehicle is reported as Unknown.

**Note:** if the investigating officer indicates a bus was involved but not how it was being used, use **98 (Not Reported)**.

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                     | <b>THEN</b>                                                                                                                                                                                                                                                   |

| 99    | <a href="#">Reported as Unknown</a>                                           |

**Definition:** This data element identifies if a special use is applicable to this vehicle at the time it was involved in the crash.

**Remarks:** This data element identifies any special use associated with this motor vehicle at the time of the crash. The special function served by this motor vehicle should be coded regardless of whether the function is marked on the vehicle.

**00 (No Special Use)** is used when the available information does not indicate or imply that this vehicle was applicable to any of the special uses listed above.

**01 (Taxi)** is used when this vehicle was being used during this trip (at the time of the crash) on a “fee-for-hire” basis to transport people. Most of these vehicles will be marked and formally

registered as taxis; however, vehicles that are used as taxis, even though they are not registered are included here. For vehicles affiliated with a transportation network company, see [20 \(Motor Vehicle Used for Electronic Ride-Hailing\)](#). Passengers do not have to be present at the time of the crash. Taxis and drivers that are off-duty at the time of the crash are coded as [00 \(No Special Use\)](#). If it is unknown whether the taxi is on-duty or not, code as **01 (Taxi)**. This attribute also applies for limousines on a “fee-for-hire” basis.

**02 (Vehicle Used for School Transport)** is used for any motor vehicle that satisfies all the following criteria:

- operated, leased, owned, or contracted by a public or private school-type institution;
- where the institution’s students may range from pre-school through high school;
- whose occupants (if any) are associated with the institution; and,
- at the time of the crash the vehicle is being used for transportation to/from a school or on a school-sponsored activity or trip.

**Note:** This attribute also includes vehicles that are not externally identifiable as a school/pupil transport vehicle but do meet all the other criteria above. For example, a transit bus, at the time of the crash, used exclusively (no other passengers except students) to transport students to/from the school or school-related activity.

In most cases, the decision to use this attribute will be based on a reference to the vehicle as a school bus in the available information. In this situation, assume the criteria are met unless it is otherwise stated in the available information.

**03 (Vehicle Used as Other Bus)** is used when a motor vehicle is designed for transporting nine or more people including the driver and does not satisfy the above “school bus” criteria. For example, [NCSA BODY TYPE code “School Bus”](#) transporting senior citizens to an activity.

**04 (Military)** is used for any vehicle that is owned by any of the Armed Forces regardless of body type. This attribute includes

- military police vehicles,
- military ambulances,
- military hearses, and
- military fire vehicles.

**05 (Police)** is used for a vehicle equipped with police emergency devices (lights and siren) that is owned or subsidized by any local, county, State, or Federal Government entity. The police vehicle is presumed to be in special use at all times, although not necessarily in “emergency use.” Vehicles not owned by a government entity that are used by law enforcement officers (e.g., undercover) are excluded.

**06 (Ambulance)** is used for any readily identifiable (lights or markings) vehicles designed to transport sick or injured people. The ambulance is presumed to be in special use at all times, although not necessarily in “emergency use.”

**07 (Fire Truck)** is used for any readily identifiable (lights or markings) vehicles specially designed and equipped to respond to fire, hazmat, medical, and extrication incidents. This

attribute includes medium and heavy vehicles such as engines, pumpers, ladder, platform aerial apparatus, heavy rescue vehicles, water tenders or tankers, brush or wilderness firefighting vehicles, etc. The fire truck is presumed to be in special use at all times, although not necessarily in “emergency use.”

**08 (Non-Transport Emergency Services Vehicle)** is used for any readily identified (lights and markings) vehicles that do not meet the criteria for [06 \(Ambulance\)](#) or [07 \(Fire Truck\)](#), and are specifically designed and equipped to respond to fire, hazmat, medical, and extrication incidents. This attribute includes light vehicles such as sedans, van, SUVs, pickups, trucks, motorcycles, etc. This attribute includes vehicles that have been dispatched to an incident or have initiated operation in a non-emergency mode and are not transporting passengers, such as patients or suspects. An example of a Non-Transport Emergency Services vehicle is a fire chief’s unit, commonly an SUV.

**NOTE on Incident Response Vehicles:** An Incident Response Vehicle is a vehicle typically equipped with a variety of tools, emergency medical equipment, traffic cones and control signs, absorbent material (for responding to spills), emergency and work lighting. These multi-purpose response units are intended to assist law enforcement, fire, and rescue personnel with trafficway incident management. A traffic incident scene is the scene of any unplanned traffic event that adversely effects normal traffic operations. Examples include, but are not limited to, traffic crashes, disabled vehicles, traffic backups, or spilled cargo.

**10 (Safety Service Patrols - Incident Response)** is used for special units that patrol highways to provide temporary traffic control for emergency situations, assistance with disabled vehicles, traffic incident scene management, and emergency response. The case material must indicate the vehicle was responding to a traffic incident at the time of its involvement in the crash.

**12 (Towing - Incident Response)** is used for any type of tow truck involved in the crash while providing tow service at a traffic incident scene. The tow truck does not need to have a vehicle in tow at the time of the crash to use this attribute. The case material must indicate the vehicle was responding to a traffic incident at the time of its involvement in the crash. Tow trucks involved in crashes under any other circumstances are not included in this attribute. Please see VEHICLE LEVEL-RELATED FACTOR [042 \(Other Working Vehicle\)](#) for these other circumstances.

**11 (Other Incident Response)** is used for Incident Response Vehicles excluding [10 \(Safety Service Patrols - Incident Response\)](#) and [12 \(Towing - Incident Response\)](#). Vehicles responding to clean up spills are examples of this. The case material must indicate the vehicle was responding to a traffic incident at the time of its involvement in the crash.

**19 (Motor Vehicle Used for Vehicle Sharing Mobility)** *is used when this motor vehicle was part of a shared mobility service (Transportation Network Company) to provide customers with the vehicle only (no driver included) at the time of the crash.*

*Examples may include car-sharing, personal vehicle sharing, e-bike sharing, or other on-demand motor vehicle transportation services on an as-needed basis.*

**20 (Motor Vehicle Used for Electronic Ride-Hailing)** is used when this vehicle was actively working for a transportation network company (TNC) *to provide passengers with transportation, on the way to pick up passengers, dropping off passengers, or waiting to provide passengers with transportation* at the time of the crash. If the vehicle was off duty and in use as a personal vehicle, use code [00 \(No Special Use\)](#). A TNC may also be called a mobility

service provider (MSP). Both apply here as they both connect paying passengers seeking transportation with vehicles/drivers via websites and mobile apps.

***Examples may include TNCs such as Beat, Uber, Lyft, Juno, Pick Me Up, Bolt, and others.***

**21 (Mail Carrier)** is used when the case material indicate this vehicle was a U.S. Postal Service (USPS) authorized mail carrier at the time of the crash. This includes personal vehicles being used as rural USPS-authorized mail carriers. This attribute excludes other delivery services (e.g., FedEx, UPS). See also VEHICLE LEVEL-RELATED FACTOR [042 \(Other Working Vehicle\)](#).

**22 (Public Utility)** is used when the case material indicate this vehicle was a public utility vehicle (electricity, gas, telephone, cable, etc.). This attribute may be used with any [UNIT TYPE](#). For example, a utility truck parked at a work site or in-transport back to the depot.

**23 (Rental Truck over 10,000 lbs.)** is used when case material indicate the vehicle was being used as a rental vehicle at the time of the crash ([NCSA BODY TYPES](#) 60-79). This attribute is intended for rental trucks in use by private citizens, not for uses by commercial concerns as part of regular business. For example, a homeowner rents a truck to move their belongings.

**24 (Truck Operating with Crash Attenuator Equipment)** is used when the case material indicate this vehicle was specially equipped with devices to absorb impacts from collisions and was in use as a crash attenuator at the time of the crash ([UNIT TYPE](#) must equal 4).

**98 (Not Reported)** *Check to see if [00 \(No Special Use\)](#) or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported**."

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**99 (Reported as Unknown)** is used if the investigating officer reported SPECIAL USE as unknown.

## V29 - Emergency Motor Vehicle Use

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.EMER\_USE, Person.EMER\_USE, Parkwork.PEM\_USE

**ELEMENT VALUES:**

| Codes | Attributes                                                                      |
|-------|---------------------------------------------------------------------------------|
| 0     | <a href="#">Not Applicable</a>                                                  |
| 2     | <a href="#">Non-Emergency, Non-Transport</a>                                    |
| 3     | <a href="#">Non-Emergency Transport</a>                                         |
| 4     | <a href="#">Emergency Operation, Emergency Warning Equipment Not in Use</a>     |
| 5     | <a href="#">Emergency Operation, Emergency Warning Equipment in Use</a>         |
| 6     | <a href="#">Emergency Operation, Emergency Warning Equipment in Use Unknown</a> |
| 8     | <a href="#">Not Reported</a>                                                    |
| 9     | <a href="#">Reported as Unknown</a>                                             |

**Definition:** Emergency Motor Vehicle Use indicates operation of any motor vehicle that is legally authorized by a government authority to respond to emergencies with or without the use of emergency warning equipment, such as a police vehicle, fire truck, or ambulance while actually engaged in such response.

**Remarks:** Emergency use also refers to an official motor vehicle that is usually traveling with emergency signals in use while engaged in an emergency response; typically, red light blinking, siren sounding, etc. Services such as escorting a funeral procession, providing traffic control assistance at a work zone, or for a motorcade or a parade would not qualify as emergency uses.

If **SPECIAL USE** is [04 \(Military\)](#), [05 \(Police\)](#), [06 \(Ambulance\)](#), [07 \(Fire Truck\)](#), [08 \(Non-Transport, Emergency Services Vehicle\)](#), [10 \(Safety Service Patrols - Incident Response\)](#), [11 Other Incident Response\)](#), or [12 \(Towing - Incident Response\)](#), then refer to the case material to determine if the vehicle was on an emergency response (i.e., red lights flashing, siren sounding, on route to hospital, etc.) at the time of the crash.

**0 (Not Applicable)** is used when **SPECIAL USE** for this vehicle is coded [00 \(No Special Use\)](#), [01 \(Taxi\)](#), [02 \(Vehicle Used as School Transport\)](#), [03 \(Vehicle Used as Other Bus\)](#), [19 \(Motor Vehicle Used for Vehicle Sharing Mobility\)](#), [20 \(Motor Vehicle Used for Electronic Ride-Hailing\)](#), [21 \(Mail Carrier\)](#), [22 \(Public Utility\)](#), [23 \(Rental Truck Over 10,000 lbs.\)](#), or [24 \(Truck Operating with Crash Attenuator Equipment\)](#).

**2 (Non-Emergency, Non-Transport)** is used when the authorized emergency vehicle has been dispatched to an incident or has initiated operation in a non-emergency mode and is not transporting passengers, such as patients or suspects. The emergency vehicle operator is not using emergency lighting, audible siren, or emergency vehicle maneuvers.

**3 (Non-Emergency Transport)** is used when the authorized emergency vehicle has been dispatched to an incident or has initiated a transport-related operation in a non-emergency mode. The emergency vehicle operator is not using emergency lighting, audible siren, or emergency

vehicle maneuvers. For example, transport of a suspect from one location to another, or inter-facility transport of a patient in an ambulance to a nursing home.

**4 (Emergency Operation, Emergency Warning Equipment Not in Use)** is used when the authorized emergency vehicle has been dispatched to an incident or has initiated an emergency operation and has no emergency lighting or audible siren in use. The emergency vehicle operator may be using emergency vehicle maneuvers as allowed under State law. Examples: a police car in the last mile approaching a bank robbery; transport of a patient in an ambulance for which lights and sirens are not used per protocol.

**5 (Emergency Operation, Emergency Warning Equipment in Use)** is used when the authorized emergency vehicle has been dispatched to an incident or has initiated an emergency operation and is using an audible siren and/or has illuminated its emergency lighting devices. The emergency vehicle operator is using, or is prepared to use, emergency vehicle maneuvers as allowed by State law.

**6 (Emergency Operation, Emergency Warning Equipment in Use Unknown)** is used when the authorized emergency vehicle has been dispatched to an incident or has initiated an emergency operation and it cannot be determined if it is using an audible siren and/or has illuminated its emergency lighting devices.

**8 (Not Reported)** *Check to see if [0 \(Not Applicable\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Examples:**

- The case material are not clear as to whether the vehicle was on an emergency response.
- The case material are not clear as to whether the vehicle is legally authorized by a government authority to respond to emergencies.

**9 (Reported as Unknown)** is used if the investigating officer reported emergency use as unknown.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                    | <b>THEN</b>                                                            |
|-----------------|--------------------------------------------------------------|------------------------------------------------------------------------|
| 1D0Q            | SPECIAL USE equals 00-03, <b>19</b> , 20-24,                 | EMERGENCY MOTOR VEHICLE USE must equal 0.                              |
| PB44            | PEDESTRIAN/BIKE TYPING - CRASH TYPE - PEDESTRIAN equals 240, | EMERGENCY MOTOR VEHICLE USE should equal 2-6 for at least one vehicle. |
| V058            | EMERGENCY MOTOR VEHICLE USE equals 2-6,                      | SPECIAL USE should equal 04-08, 10, 11, 12, or 24.                     |

## V30 - Travel Speed

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.TRAV\_SP

### ELEMENT VALUES:

| Codes   | Attributes                                         |
|---------|----------------------------------------------------|
| 000     | <a href="#">Stopped Motor Vehicle In-Transport</a> |
| 001-151 | Reported Speed Up to 151 mph                       |
| 997     | Greater than 151 MPH                               |
| 998     | <a href="#">Not Reported</a>                       |
| 999     | <a href="#">Reported as Unknown</a>                |

**Definition:** This element records the speed the vehicle was traveling prior to the occurrence of the crash as reported by the investigating officer.

**Remarks:** Code the TRAVEL SPEED as indicated by the investigating officer. Do not enter the [SPEED LIMIT](#). It is permissible to use estimates by drivers or witnesses reported in the case material if the speed reported is not contradictory to the officer's reported travel speed. See clarification on the use of information provided by witnesses in section [103. Data Sources](#). TRAVEL SPEED should be representative of the vehicle's speed associated with the pre-event movement, prior to any avoidance maneuvers. If the police calculated a speed, please be aware that this may represent the impact speed that is not necessarily the travel speed.

Code the nearest mph for this vehicle as reported on the case material.

### Examples:

| Reported Speed | Code |
|----------------|------|
| 40.2 mph       | 40   |
| 40.5 mph       | 41   |

If the officer gives a range, code the median speed and, if necessary, round up to the next higher whole number. If the officer gives a minimum speed (e.g., "at least 55 mph" or "in excess of 60 mph,") then use that speed (e.g., code as "55" and "60" respectively).

### Examples:

| Reported Speed | Code |
|----------------|------|
| 40-50 mph      | 45   |
| 45-50 mph      | 48   |

**000 (Stopped Motor Vehicle In-Transport)** is used when this vehicle is stopped on the roadway.

**998 (Not Reported)** Check to see if [999 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **998 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Examples:**

1. the officer did not mention Travel Speed, or
2. did not indicate Travel Speed within a field in the case material.

**999 (Reported as Unknown)** is used when the officer indicates that the TRAVEL SPEED is unknown.

**Consistency Checks** [\(See Section 400\):](#)

| 9     | <a href="#">Unknown if Underride or Override</a>                                                       |

**Definition:** This element indicates whether an underride or override occurred during the crash involving this vehicle.

**Remarks:**

UNDERRIDE/OVERRIDE is not applicable to [NCSA BODY TYPES 80-84, 88-91](#) (motorcycles, ATVs, snowmobiles); use [0 \(No Underride or Override Noted\)](#).

**Rationale:** Needed to identify the magnitude of crashes in which an underride or override occurs to support NHTSA rulemaking activities and motor vehicle bumper compatibility research.

For underrides and overrides, it is important to determine the vehicle performing the action. Two vehicles cannot be considered to underride and override simultaneously.

In cases in which two vehicles collide “head-on” and one vehicle ends up under the other, you must determine whether an **Underride** or **Override** has occurred.

An **Underride** refers to a vehicle sliding under another vehicle during a crash. *Examples include vehicles completely underriding a trailer from the side without stopping and vehicles striking the rear end or the side of a tractor-trailer and coming to a stop under the trailer.* In these examples, the automobile is the underriding vehicle. We distinguish between those underriding vehicles with compartment intrusion versus those with no compartment intrusion.

- **Compartment intrusion** indicates a breach of the passenger compartment of this underriding (striking) vehicle. For example, damage to the windshield or glass area.

- **No compartment intrusion** means that the underridden vehicle (struck vehicle) did not directly enter the passenger compartment of this vehicle (for example, damage to the hood or front bumper).

An **Override** refers to a vehicle riding up over another (including a parked vehicle). A vehicle straddling a guardrail, for example, is not coded as an override.

**0 (No Underride or Override Noted)** is used when there is no indication in the case material that this vehicle was involved in and underride or override as defined above. Also use this attribute for [NCSA BODY TYPES 80-84, 88-91](#) (motorcycles, ATVs, snowmobiles).

### ***Underrides and Vehicles Under Other Vehicles***

Codes “1-3” are used when **this vehicle** underrides a motor vehicle in-transport (includes those in motion outside the trafficway).

Codes “4-6” are used when **this vehicle** underrides a motor vehicle that is Not In-Transport. This includes parked/stopped off roadway motor vehicles and working motor vehicles (e.g., cherry picker, paint-striping truck).

#### **Compartment Intrusion Guidelines:**

To use Codes “1” or “4,” the police crash report should indicate that the passenger compartment of the underriding (striking) vehicle has been damaged. Sources of this information can be the police crash report narrative and/or the vehicle damage scale. If the top of the vehicle is damaged, as noted by the vehicle damage scale, codes “1” or “4” would apply.

Codes “2” and “5,” **Underride, No Compartment Intrusion**, are used when a portion of the vehicle is under another, and it is known that there is no passenger compartment intrusion. Codes “3” and “6” are used when it is unknown if there is passenger compartment intrusion.

### ***Overrides***

**7 (Overriding a Motor Vehicle In-Transport)** is used when this vehicle overrides a motor vehicle in-transport (includes those in motion outside the trafficway).

**8 (Overriding a Motor Vehicle Not In-Transport)** is used when this vehicle overrides a motor vehicle not in-transport. This includes parked/stopped off roadway motor vehicles and working motor vehicles (e.g., cherry picker, paint-striping truck).

**9 (Unknown if Underride or Override)** is used when an Underride or Override occurred but it cannot be determined which is appropriate.

## V32 - Rollover

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.ROLLOVER, Person.ROLLOVER

**ELEMENT VALUES:**

| Codes | Attributes                                          |
|-------|-----------------------------------------------------|
| 0     | <a href="#">No Rollover</a>                         |
| 1     | <a href="#">Rollover, Tripped by Object/Vehicle</a> |
| 2     | <a href="#">Rollover, Untripped</a>                 |
| 9     | <a href="#">Rollover, Unknown Type</a>              |

**Definition:** This element identifies whether a rollover or overturn occurred during the crash involving this vehicle.

**Remarks:** ROLLOVER is defined as any vehicle rotation of 90 degrees or more about any true longitudinal or lateral axis. Rollover can also be referred to as overturn or end-over, and can occur at any time during this vehicle's [SEQUENCE OF EVENTS](#).

ROLLOVER does **not** apply to 2-wheeled motorcycles for this element (use [0 \(No Rollover\)](#)). However, in the [FIRST HARMFUL EVENT](#), [MOST HARMFUL EVENT](#), and [SEQUENCE OF EVENTS](#) you may use [01 \(Rollover/ Overturn\)](#) to record that this vehicle (motorcycle) overturned. *If a motorcycle is pulling a trailing unit that overturns, the motorcycle should have [01 \(Rollover/Overturn\)](#) in its Crash Events. However, since the power unit is a motorcycle, the element ROLLOVER still does NOT apply.*

A ROLLOVER can be used for 3- or 4-wheeled ATVs, snowmobiles, go-karts, and 3-wheeled motorcycles.

**0 (No Rollover)** is used when there is no indication that a rollover occurred.

**1 (Rollover, Tripped by Object/Vehicle)** is used when the vehicle's lateral motion is *known to have been* suddenly slowed or stopped by an opposing force, inducing a rollover. The opposing force may be produced by a curb, ditch, pothole, another vehicle, pavement, or soil dug into by the vehicle's wheels. This includes instances where a vehicle impacts a fixed object (e.g., tree, barrier, pole, or post) then rolls over.

**2 (Rollover, Untripped)** is used when a rollover occurs *and it is known that the rollover was* not a result of a collision with an object or a vehicle or generated by any other opposing force as referred to in [1 \(Rollover, Tripped by Object/Vehicle\)](#). An untripped rollover is one for which there is no obvious cause other than normal surface friction. This is usually the result of vehicle instability and there is no evidence of furrowing or gouging on the pavement, gravel, grass, or dirt surface.

**9 (Rollover, Unknown Type)** is used when a rollover occurred, but there is not sufficient information to determine tripped versus untripped status.

Consistency Checks [\(See Section 400\)](#):

### V33 - Location of Rollover

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.ROLINLOC

**ELEMENT VALUES:**

| Codes | Attributes                            |
|-------|---------------------------------------|
| 0     | No Rollover                           |
| 1     | <a href="#">On Roadway</a>            |
| 2     | <a href="#">On Shoulder</a>           |
| 3     | <a href="#">On Median/Separator</a>   |
| 4     | <a href="#">In Gore</a>               |
| 5     | <a href="#">On Roadside</a>           |
| 6     | <a href="#">Outside of Trafficway</a> |
| 7     | <a href="#">In Parking Lane/Zone</a>  |
| 9     | <a href="#">Unknown</a>               |

**Definition:** This element identifies the location of the trip point or start of the vehicle's roll.

**Remarks:**

**1 (On Roadway)** is used when the available information indicates the vehicle tripped or began its roll on the roadway. A roadway is that part of a trafficway designed, improved, and ordinarily used for motor vehicle travel. Where various classes of motor vehicles are segregated, that part of a trafficway used by a particular class is the roadway (i.e., travel lanes). Separate roadways may be provided for northbound and southbound traffic or for trucks and automobiles. This includes continuous left-turn lanes.

**2 (On Shoulder)** is used when the available information indicates the vehicle tripped or began its roll on the shoulder. A shoulder is that part of a trafficway contiguous with the roadway for emergency use, for accommodation of stopped road vehicles, and for lateral support of the roadway structure.

**3 (On Median/Separator)** is used when the available information indicates the vehicle tripped or began its roll on the median/separator. A median is an area of a trafficway between parallel roads separating travel in opposite directions. Continuous left-turn lanes are not considered painted medians. A separator is the area of a trafficway between parallel roads separating travel in the same direction or separating a frontage road.

**4 (In Gore)** is used when the available information indicates the vehicle tripped or began its roll in the gore. The gore is an area of land where two roadways diverge or converge. The area is bounded on two sides by the edges of the roadways, which join at the point of divergence or convergence. The direction of traffic must be the same on both of these roadways. The area includes shoulders or marked pavement, if any, between the roadways. (See [Figure 11](#))

**5 (On Roadside)** is used when the available information indicates the vehicle tripped or began its roll on the roadside. Roadside is the outermost part of the trafficway from the property line or other boundary into the edge of the first road.

**6 (Outside of Trafficway)** is used when the available information indicates the vehicle tripped or began its roll outside the right-of-way.

**7 (In Parking Lane/Zone)** refers to an area on the roadway, or next to the roadway, on which parking is permitted in marked or unmarked spaces. This includes curbside and edge of-roadway parking (for example, legal residential parking, city-street parking, etc.). Sometimes a strip of roadway can be designated for parking at certain hours of the day (parking lane) and for regular travel at other hours (travel lane). This code should NOT be used during hours when parking is NOT permitted (see [1 \(On Roadway\)](#)).

**9 (Unknown)** is used when the location of the trip point cannot be determined from available resources.

If the [FIRST HARMFUL EVENT](#) was a [01 \(Rollover/Overturn\)](#), then:

| If <a href="#">Relation to Trafficway</a> equals:               | Then Location of Rollover should equal: |

| 99    | <a href="#">Damage Areas Unknown</a> |

**Definition (Areas of Impact - Initial Contact Point):** This subfield identifies the area on this vehicle that produced the first instance of injury to non-motorists or occupants of this vehicle, or that resulted in the first instance of damage to other property or to this vehicle.

**Definition (Damaged Areas):** This subfield identifies all the areas on this vehicle that were damaged in the crash as reflected in the case material by the officer.

**Remarks:** If AREAS OF IMPACT- INITIAL CONTACT POINT / DAMAGED AREAS are provided on the crash report in this exact format, use the values from the report unless there are clear errors (e.g., officer switches vehicles by mistake). If these elements are not provided on the crash report in this exact format, then similar report fields, narrative, or diagram information may be used to code these elements. These subfields do not refer to direction of force of the impact. They identify the area(s) on the vehicle associated with the initial contact ([Subfield 1](#)) and all damage to the vehicle identified in the case material ([Subfield 2](#)).

### ***Areas of Impact - Initial Contact Point (Subfield 1):***

This subfield identifies the area on this vehicle that produced the first instance of injury to non-motorists or occupants of this vehicle, or that resulted in the first instance of damage to other property or to this vehicle. The event that produced the Initial Contact Point for this vehicle may or may not be the FIRST HARMFUL EVENT for the **crash**. This data is derived from the [CRASH EVENTS](#) Table and will always be the first recorded AREA(S) OF IMPACT element value for each vehicle in the Crash Events Table.

See the [Coding Guide: Vehicle Components and Areas of Impact](#) for helpful information.

\*Note the same element values from **Areas of Impact - Initial Contact Point** are used to complete the **Areas of Impact (AOI)** fields in the [CRASH EVENTS](#) Table for all harmful events.

*Figure 15: Areas of Impact - Initial Contact Point Element Values Diagram*

### **00 (Non-Collision [Initial Contact Point])**

If the first harmful event involving this vehicle in the Crash Events Table is a [non-collision event](#), then Initial Contact Point will be **00 (Non-Collision)**.

“01-12” refer to the points on a clock (see [Figure 15](#)). The sides of the vehicle are divided into 5 equal segments, 01 through 05 for the right side and 07 through 11 for the left side. The front

(12), back (06), top (13) and undercarriage (14) complete the outside surfaces of the vehicle. Use the diagrams in [Figure 15](#) for examples of how the 5 equal side segments are created on several vehicle types.

As procedure, start by looking for one of the “clock” values 01-12 or specific situation values 00, 13, 14, 18. If sufficient detail is not available to choose one of these values, move out to the next set of values to try to identify the appropriate codes (i.e., **62-63, 82-83**, then **61, 81**). (See [Figure 15](#)) Lastly, for missing information pertaining to known harmful events, a [98 \(Not Reported\)](#) attribute is available.

### **61-63 and 81-83:**

Codes 62-63 and 82-83 are used when there is not sufficient detail available in the case material to identify a more specific AREA OF IMPACT, 01-05 and 07-11, but one of the quadrants can be identified (i.e., **62 (Left-Front Side)**, **63 (Left-Back Side)**, **82 (Right-Front Side)**, or **83 (Right-Back Side)**). Also, use these attributes if the case material indicate that the damage area is “between” or overlapping two known clock points. (e.g., if the damage area is midway between or overlapping clock points 10 and 11, use **62 (Left-Front Side)**).

Codes 61 and 81 are used when there is not sufficient detail available in the case material to identify a more specific AREA OF IMPACT, 62-63 or 82-83, but one of the sides can be identified (i.e., **61 (Left)** or **81 (Right)**).

### **Guideline for Resolving Ambiguous Information**

If the language in the narrative is ambiguous **AND** the diagram or other case information don’t provide resolution, use the area indicated **first in the narrative wording** to select the AREA OF IMPACT to code. See examples table below.

### **Examples:**

| <b>Description</b> | <b>Coding</b> |
|--------------------|---------------|
| Front, left        | 12            |
| Left, front        | 62            |
| Front, corner      | 12            |
| Right, rear        | 83            |
| Back, right side   | 06            |

It is important to note that AREA OF IMPACT refers mainly to the area of the vehicle that sustained the damage and does not depend upon the attitude of the vehicle (e.g., damage to a grille is still damage at 12 o-clock even if it was caused by sliding sideways past a utility pole).

However, **13 (Top)** may raise questions. The front and rear windows of some vehicles may also be viewed from the top. It may also be difficult to code impacts to the hood and rear deck of a vehicle.

With **13 (Top)** the direction of force sometimes must be considered. The following are guidelines for using **13 (Top)**.

1. If the area was damaged by an impact that was received horizontally to an upright vehicle, use one of the codes “01 to 12, 61-63, 81-83.”
2. If the area was damaged by an impact that was received from a vertical direction above the upright vehicle, use **13 (Top)**.
3. If the impact was received or direction of force was at an angle of less than 15 degrees above the horizontal, it is considered horizontal.
4. With a vehicle in other than upright attitudes, remember, it is the area of the vehicle that was damaged that is important.

**14 (Undercarriage)** refers to non-horizontal impacts to the undercarriage or swiping or snagging of undercarriage components (axles, exhaust system, etc.). Tire/Wheel impacts are coded to the AREA OF IMPACT (01-12, 61-63, 81-83). If a vehicle impacts the side plane of a truck tractor/trailer, and the AOI for the truck tractor/trailer is listed as undercarriage on the police crash report, code the truck tractor/trailer’s AOI - Initial Contact clock point involved in the impact rather than **14 (Undercarriage)**.

#### **Special Instructions Involving Motorcycles:**

For cases involving a motorcycle where the area of initial contact is described as “front tire/wheel” or “front end” code as **12 (Front)**, or “rear tire/wheel” or “rear end” code as **06 (Back)** if the impact was received on a horizontal plane.

If the only event for a vehicle is a [non-collision event](#), the AREA OF IMPACT - Initial is coded **00 (Non-Collision)**. If following a non-collision event, a vehicle has a collision event; AREA OF IMPACT, INITIAL CONTACT POINT is still coded **00 (Non-Collision)**.

Hitting the ground during a non-collision crash is not considered an “impact” for this subfield.

#### **Set in Motion Attributes:**

“Loads” of a vehicle includes people or property upon or set in motion by the vehicle, people boarding or alighting from the vehicle, and people or property attached to and in position to move with the vehicle. A vehicle associated with a harmful event produced by a load being separated from, or propelled by, the vehicle should have one of the three set in motion AOI values for this event. These set in motion values identify that only the load has made contact with the other vehicle, person, or other property in that event.

#### **Important Notes:**

- A load separated from, or an object propelled by, a vehicle should **not** receive a [SEQUENCE OF EVENTS 63 \(Ran Off Roadway-Right\)](#), [64 \(Ran Off Roadway-Left\)](#), [65 \(Cross Median\)](#), [68 \(Cross Centerline\)](#), or [69 \(Re-entering Roadway\)](#) associated with the movement of the load because these events apply to the vehicle itself and not to the load or object that was propelled. For example, if logs fall from a truck and only the logs (load of the truck) cross the centerline, this crossing of the centerline by the load would **NOT** receive a **68 (Cross Centerline)** event.

- If debris set in motion as the result of a vehicle to vehicle collision produces a subsequent harmful event (e.g., strikes a third vehicle) and you cannot reasonably determine which vehicle the debris came from, use the lowest vehicle number of the MVIT(s) involved in the vehicle to vehicle event that produced the debris. In the element [RELATED FACTORS - VEHICLE LEVEL](#) use code [029 \(Default Code Used for Vehicle Numbering\)](#).
- The in-transport vehicle setting the object in motion and the object set in motion are coded under **VEHICLE NUMBER (THIS VEHICLE)** and **AOI (This Vehicle)**.
- The only time **AOI (This Vehicle)** and **AOI (Other Vehicle)** are both coded **18 (Cargo/Vehicle Parts Set in Motion)**, **19 (Other Objects or Person Set in Motion)**, or **20 (Object Set in Motion, Unknown if Cargo/Vehicle Parts or Other)** is if the impact is between objects set in motion **by both** in-transport motor vehicles.

**18 (Cargo/Vehicle Parts Set in Motion)** is selected when the harmful event involves an impact between a fixed/non-fixed object or vehicle and cargo or parts from an in-transport motor vehicle that are set in motion. That is, use this code when the object set in motion is cargo (e.g., mattress, logs, tools, unsecured objects on the in-transport motor vehicle) or a part of an in-transport motor vehicle (e.g., hubcap or mirror).

**Examples:**

Vehicle 1 (log truck) swerves to avoid a braking vehicle (Vehicle 2). A log becomes dislodged from Vehicle 1 and lands on Vehicle 2's top.

- Vehicle 1 AREA OF IMPACT, INITIAL CONTACT POINT would be coded as **18 (Cargo/Vehicle Parts Set in Motion)**.
- Vehicle 2 AREA OF IMPACT, INITIAL CONTACT POINT would be coded as [13 \(Top\)](#).

**19 (Other Objects or Person Set in Motion)** is used when the harmful event involves an object set in motion by an in-transport motor vehicle that is **NOT** cargo or part of the in-transport motor vehicle (e.g., kicked-up stone, motorcycle rider, parked vehicle, stop sign).

**Examples:**

Vehicle 1 kicks up a stone that impacts Vehicle 2's windshield.

1. Vehicle 1 AREA OF IMPACT, INITIAL CONTACT POINT would be coded as **19 (Other Objects or Person Set in Motion)**.
2. Vehicle 2 AREA OF IMPACT, INITIAL CONTACT POINT would be coded as **12 (Front)**.

**20 (Object Set in Motion, Unknown if Cargo/Vehicle Parts or Other)** is used when it is UNKNOWN whether the object was the cargo or a part of an in-transport motor vehicle ([18 \(Cargo/Vehicle Parts Set in Motion\)](#)) or some other object ([19 \(Other Objects or Person Set in Motion\)](#)).

**98 (Not Reported)** Check to see if [99 \(Reported as Unknown\)](#) is more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

**Code 98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**AREAS OF IMPACT - Initial Contact Point Examples of Not Reported:**

- The case material lack the detail to identify the initial contact point at all (e.g., narrative only states the vehicle departed the roadway and impacted a tree).
- The case material lack the detail to identify the initial contact point among a number of possible choices for the first harmful event for the vehicle (e.g., crash report field indicates front and right side damage from separate impacts and does not clarify which area is associated with the initial impact).

**99 (Reported as Unknown)** is used if the investigating officer reported that the Initial Contact Point was unknown.

**Areas of Impact - Damaged Areas (Subfield 2):**

This subfield identifies all the areas on this vehicle that were damaged in the crash as reflected in the case material. For trailers that become separated from the power unit at the onset of the unstabilized situation or during the crash, treat the entire combination as one unit when recording Damaged Areas. Please see the Clock Point Diagrams in [Figure 17](#) to establish damage areas for combination vehicles. See the [Coding Guide: Vehicle Components and Areas of Impact](#) for helpful information.

**Vehicles noted as "totaled:"**

This element is identifying the vehicle planes that were damaged, so do not assume that a vehicle noted in the case material as "totaled" translates to all areas being damaged. This term is often referring to the cost to repair the damage, not the areas damaged.

Figure 16: Damaged Areas Element Values Diagram

\*Note: When entering the data there are three short cut selections in **RBIS** for identifying multiple areas. Those selections are:

1. **Select All** - this will select all values **01-12**, **13 (Top)**, and **14 (Undercarriage)**
2. **Left Side** - this will select all values **07-11**.
3. **Right Side** - this will select all values **01-05**.

**01-12 (Clock Values)** refer to the points on a clock (see [Figure 16](#)) to identify areas on the vehicle that were damaged in the crash. This subfield includes induced damage identified in the report. For example, the case material show an impact centered at 03 (AOI - Initial Contact) that produced damage in 02, 03, 04. The sides of the vehicle are divided into 5 equal segments, 01 through 05 for the right side and 07 through 11 for the left side. The front (12), back (06), top (13), and undercarriage (14) complete the outside surfaces of the vehicle. Use the diagrams in [Figure 17](#) for examples of how the 5 equal side segments are created on several vehicle types.

**13 (Top)** includes damage to the hood, windshield, roof, rear window, and trunk deck.

**14 (Undercarriage)** includes damage to the tires/wheels, axles, exhaust system, etc.

**15 (No Damage)** is used for vehicles that experience harmful events, but the events do not produce physical damage to the vehicle itself.

**Examples include:**

- Vehicles that have the [non-collision harmful events](#) of gas inhalation, injured in vehicle, fell/jumped from vehicle, or other non-collision.
- Vehicles that have a collision event but the event does not produce damage to the vehicle such as running over a pedestrian lying in the roadway, striking a bicyclist, striking another vehicle where only the struck vehicle is damaged, or when the only collision event is cargo falling from this vehicle that lands on another vehicle or person.

**99 (Damage Areas Unknown)** is used when the case material does not indicate which area or areas received damage or when the information in the case material is confusing or inadequate for the purposes of this determination.

### **Handling of known events with unknown damage areas:**

For situations where you have known damage areas associated with a specific event(s), and additional harmful events without knowing specific damage areas for the additional events, code only the known damage areas in this subfield. For example, if the narrative only states that “V1 struck several trees” with the only indication of damage given as the initial front contact, and a police crash report box marked “Totaled,” code only 12 for the known damage to the front of the vehicle.

### **Handling of non-collision harmful events that produce vehicle damage:**

For situations where a vehicle is involved in the following [non-collision harmful events](#): (01) **Rollover/Overturn**, (02) **Fire/Explosion**, (03) **Immersion or Partial Immersion**, (16) **Thrown or Falling Object**, (44) **Pavement Surface Irregularity (Ruts, Potholes, Grates, etc.)**, (51) **Jackknife (harmful to this vehicle)**, or (72) **Cargo/Equipment Loss or Shift (harmful to this vehicle)**, code only the damage areas reflected in the case material by the officer.

**For example, the investigating officer may indicate damaged locations that translate to:**

- 01-12, 13, 14 for a vehicle that was consumed by a fire or immersed in a river.
- 01-05, 13 for a vehicle that rolls onto its right side and then roof.
- 13 for a vehicle that only has damage to the hood from a fire.
- 13 for a vehicle that has a tree fall on its roof.
- 14 for a vehicle that strikes a pothole on its undercarriage.

Do not record damage at these locations for these non-collision harmful events unless so indicated by the case material.

If a vehicle that experiences only these non-collision events and has only “non-collision” reflected in the case material by the officer for its damaged areas, then use [99 \(Damage Areas Unknown\)](#).

Figure 17: Clock Point Diagrams

Consistency Checks [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>THEN</b>                                                                                                                                                                                             |

## V35 - Extent of Damage

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.DEFORMED, Parkwork.PVEH\_SEV

**ELEMENT VALUES:**

| Codes | Attributes                          |
|-------|-------------------------------------|
| 0     | <a href="#">No Damage</a>           |
| 2     | <a href="#">Minor Damage</a>        |
| 4     | <a href="#">Functional Damage</a>   |
| 6     | <a href="#">Disabling Damage</a>    |
| 8     | <a href="#">Not Reported</a>        |
| 9     | <a href="#">Reported as Unknown</a> |

**Definition:** This element indicates the amount of damage sustained by this vehicle in this crash as indicated in the case material based on an operational damage scale.

**Remarks:** There is a distinction between the cost to repair the damage and the degree to which the damage affects the vehicle's operability (totaled, under/over monetary threshold). Operational damage is recorded here. For example, if the available information indicates that the vehicle was totaled and the vehicle was towed away for any reason, use [6 \(Disabling Damage\)](#). However, if the available information indicates that the vehicle was totaled, but the vehicle was driven away, use [4 \(Functional Damage\)](#).

**0 (No Damage)** is used when there is no damage indicated in the available information for this vehicle.

**2 (Minor Damage)** is damage that does not disable or affect the operation of the motor vehicle. This attribute is used when the case material indicate damage to the vehicle to be Minor or less than Functional and the vehicle is not towed due to damage.

Examples of **2 (Minor Damage)** include: dented or bent fenders, bumpers, grills, body panels, and destroyed hubcaps.

**4 (Functional Damage)** is damage that is not disabling but affects the operation of the motor vehicle or its parts. This attribute is used when the available information specifically indicates the damage is moderate or functional.

Examples of **4 (Functional Damage)** include

- doors, windows, hood and trunk lids that will not operate properly;
- broken glass that obscures vision;
- damage that would prevent the motor vehicle from passing an official motor vehicle inspection;
- tire damage even though the tire may have been changed at the scene;
- bumpers that are loose;

- headlamp or taillight damage that would make night driving hazardous but would not affect daytime driving; and,
- damage to turn signals, horn, or windshield wipers, which makes them inoperative.

**6 (Disabling Damage)** is damage that precludes departure of the motor vehicle from the crash scene in its usual daylight-operating manner after simple repairs. As a result, the motor vehicle would have had to have been towed or carried from the crash scene or assisted by an emergency motor vehicle. This attribute should be used when the available information specifically indicates disabling or severe damage. This attribute is also used when the damage is indicated to be of greater magnitude than Functional (moderate), e.g., major, extensive, totaled and the vehicle was towed from the scene.

**8 (Not Reported)** Check to see if [0 \(No Damage\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when the available information specifically indicated the damage severity to be unknown.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                                         | <b>THEN</b>                               |

| <b>Error ID</b> | <b>Error Message</b>                                                                                                           |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------|
| 4U2F            | At least one INJURY SEVERITY should equal 1, 2, 3, 4, 5, or 9, or at least one EXTENT OF DAMAGE should equal 2, 4, 6, 8, or 9. |
| U371            | UNLIKELY: EXTENT OF DAMAGE equals 8 if PSU_STATE does not equal <b>CA</b> , IL, NJ, NY, TX, UT, or WA.                         |

## V36 - Vehicle Removal

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.TOWED, Parkwork.PTOWED

**ELEMENT VALUES:**

| Codes | Attributes                                                   |
|-------|--------------------------------------------------------------|
| 2     | <a href="#">Towed Due to Disabling Damage</a>                |
| 3     | <a href="#">Towed <b>But</b> Not Due to Disabling Damage</a> |
| 7     | <a href="#">Towed, Unknown Reason</a>                        |
| 5     | <a href="#">Not Towed</a>                                    |
| 8     | <a href="#">Not Reported</a>                                 |
| 9     | <a href="#">Reported as Unknown</a>                          |

**Definition:** This data element describes the mode in which the vehicle left the scene of the crash.

**Remarks:** This data element describes the mode in which the vehicle left the scene of the crash. Towing includes vehicles carried from the scene on a flatbed tow truck.

If the vehicle is a combination vehicle (power unit and at least one trailer), the power unit and/or trailer(s) are considered when determining tow status. If the available information indicates the power unit, or trailer of a combination unit, sustained enough damage to require towing, consider this vehicle as towed due to damage.

**2 (Towed Due to Disabling Damage)** is used for any towing that is due to disabling damage caused by this crash that prohibits vehicle movement under its own power.

If a vehicle was pushed by hand or by another vehicle after the crash because it was not drivable, then use **2 (Towed Due to Disabling Damage)**.

If a vehicle was towed due to disabling damage **AND** for other reasons such as driver arrest, then code this vehicle as **2 (Towed Due to Disabling Damage)**.

**3 (Towed **But** Not Due to Disabling Damage)** is used when the vehicle did not sustain disabling damage, but the vehicle had been removed from the scene of the crash by tow truck or other vehicle for other reasons (e.g., minor damage, functional damage, mired vehicles, driver arrested, injured driver, etc.).

**7 (Towed, Unknown Reason)** is used if the vehicle is towed, but the reason for towing is unknown. For example, a vehicle is reported in the case material as towed, but it cannot be determined whether it was due to disabling damage or for other reasons.

**5 (Not Towed)** is used when it is specifically indicated in the available information that the vehicle was not towed or when the preponderance of the information available indicates that the vehicle was driven away or was not towed.

**NOTE:** The police crash report narrative may be used to supersede and/or clarify the above information.

**8 (Not Reported)** Check to see if [5 \(Not Towed\)](#) or [9 \(Reported as Unknown\)](#) are more appropriate for the situation.

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **8 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**9 (Reported as Unknown)** is used when the investigating officer indicates it was unknown as to how the vehicle was removed.

**Consistency Checks** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>IF</b>                        | <b>THEN</b>                                     |
|-----------------|----------------------------------|-------------------------------------------------|
| 3C1Q            | EXTENT OF DAMAGE equals 0, 2, 4, | VEHICLE REMOVAL must equal 3, 5, 8, or 9.       |

## V37 - Sequence of Events

**FORMAT:** Read Only

**SAS NAME:** Cevent.SOE, Vevent.SOE

**ELEMENT VALUES:**

### Non-Harmful Events:

| Codes | Attributes                                                          |
|-------|---------------------------------------------------------------------|
| 61    | <a href="#">Equipment Failure (blown tire, brake failure, etc.)</a> |
| 62    | <a href="#">Separation of Units</a>                                 |
| 63    | <a href="#">Ran Off Roadway-Right</a>                               |
| 64    | <a href="#">Ran Off Roadway-Left</a>                                |
| 79    | <a href="#">Ran off Roadway - Direction Unknown</a>                 |
| 71    | <a href="#">End Departure</a>                                       |
| 65    | <a href="#">Cross Median</a>                                        |
| 68    | <a href="#">Cross Centerline</a>                                    |
| 66    | <a href="#">Downhill Runaway</a>                                    |
| 67    | <a href="#">Vehicle Went Airborne</a>                               |
| 69    | <a href="#">Re-entering Roadway</a>                                 |
| 70    | <a href="#">Non-harmful, Swaying Trailer/Jackknife</a>              |
| 60    | <a href="#">Cargo/Equipment Loss or Shift (non-harmful)</a>         |

### Non-Collision Harmful Events:

| Codes | Attributes                                                                   |
|-------|------------------------------------------------------------------------------|
| 01    | <a href="#">Rollover/Overtake</a>                                            |
| 02    | <a href="#">Fire/Explosion</a>                                               |
| 03    | <a href="#">Immersion or Partial Immersion</a>                               |
| 04    | <a href="#">Gas Inhalation</a>                                               |
| 51    | <a href="#">Jackknife (harmful to this vehicle)</a>                          |

| 93    | <a href="#">Unknown Fixed Object</a>                      |

### **[Not Reported/Unknown](#)**

| Code | Attribute                                           |
|------|-----------------------------------------------------|
| 98   | <a href="#">Harmful Event, Details Not Reported</a> |
| 99   | <a href="#">Reported as Unknown</a>                 |

**Definition:** The events in sequence related to this motor vehicle, regardless of injury and/or property damage. Code each event for this vehicle in the order in which they occur, time wise, from police crash report narrative and diagram.

**Remarks:** This data element is derived from the [CRASH EVENTS](#) Table. Recording of CRASH EVENTS ends at the last harmful event of the entire crash. Therefore, a non-harmful event (e.g., Crossing the Centerline) that occurs following the last harmful event of the crash will not be included. Prior to selecting an unknown value, the case material should be thoroughly evaluated to identify if a specific attribute can be applied.

Correction to the SEQUENCE OF EVENTS order must be made by revision to the [CRASH EVENTS](#) Table.

### ***Non-Harmful Events:***

**61 (Equipment Failure)** (blown tire, brake, etc.) Examples of equipment failure include blown tires, brake failures, etc. This attribute should not be used to describe damage resulting from a collision event.

**62 (Separation of Units)** is used when a trailing unit separates from its power unit or another trailing unit(s). This applies to truck tractors with trailer(s), single-unit trucks with a trailer, and other vehicles pulling a trailer (e.g., car pulling a boat or motor home).

**63 (Ran Off Roadway-Right)** is used if any part of the vehicle runs off the right side of the roadway. Identification of running off roadway can be determined from the case material. This attribute can be used anytime in the event sequence before or after any harmful events. This attribute does not apply to the “load” in cases involving AREAS OF IMPACT [18 \(Cargo/Vehicle Parts Set in Motion\)](#) or [19 \(Other Objects or Person Set in Motion\)](#).

**64 (Ran Off Roadway-Left)** is used if any part of the vehicle runs off the left side of the roadway. Identification of running off roadway can be determined from the case material. This attribute can be used anytime in the event sequence before or after any harmful events. This attribute does not apply to the “load” in cases involving Areas of Impact [18 \(Cargo/Vehicle Parts Set in Motion\)](#) or [19 \(Other Objects or Person Set in Motion\)](#).

*Figure 18: Ran Off Roadway Examples*

**79 (Ran off Roadway-Direction Unknown)** is used when any part of the vehicle ran off the roadway, but it cannot be determined from the case material whether right or left. See clarification on the use of information provided by witnesses in section [103. Data Sources](#).

### **Coding Guidelines for Running Off Roadway (Right or Left)**

#### **For Divided Highways:**

On a divided highway, a vehicle can run off the roadway by leaving the roadway and entering the median. When this occurs involving a vehicle on the correct side of a divided highway, the proper “Ran Off Roadway” attribute is always [64 \(Ran Off Roadway - Left\)](#). In situations where a vehicle departs the roadway into the median, traverses the median, and continues across the opposing roadway, code [64 \(Ran Off Roadway - Left\)](#) followed by [65 \(Cross Median\)](#).

**For vehicles turning at “T-intersections”:**

For “T-intersections” when the vehicle loses control when in a turn, choose right or left based upon the direction of travel for the vehicle’s proper travel lane for their intended travel path. For vehicles traveling straight through “T-Intersections” use **71 (End Departure)**. See [Figure 19](#) below.

**71 (End Departure)** is used if the vehicle leaves the roadway by traveling straight through the top of a “T-intersection” of a two-way trafficway or top of an intersecting one-way roadway. This code should also apply to vehicles traveling off the end of dead-end roadways or into the barrier of a closed trafficway. See [Figure 19](#) below.

**71 – End Departure**

*Figure 19: End Departure Examples*

**65 (Cross Median)** is used when a vehicle departs its roadway, traverses the median, and enters the shoulder or travel lanes on the opposite side of a divided highway. This attribute does not apply to the “load” in cases involving AREAS OF IMPACT [18 \(Cargo/Vehicle Parts Set in Motion\)](#) or [19 \(Other Objects or Person Set in Motion\)](#).

**68 (Cross Centerline)** is used when a vehicle crosses over the centerline of a two-way, undivided highway. The centerline must be delineated with paint or raised markers. This is also used for unstabilized situations involving vehicles that depart from their initial travel lane(s) and enter the continuous left-turn lane, having a harmful event that is located within the marked boundaries of the continuous left-turn lane. This attribute also applies to vehicles that traverse the continuous left-turn lane area, having a harmful event that is located in the opposing travel lane(s). This attribute does not apply to the “load” in cases involving AREAS OF IMPACT [18 \(Cargo/Vehicle Parts Set in Motion\)](#) or [19 \(Other Objects or Person Set in Motion\)](#).

**66 (Downhill Runaway)** refers to any vehicle that cannot decelerate on a downhill grade. This does not apply to a vehicle that cannot slow down due to lack of surface friction (due to ice, snow, etc.).

**67 (Vehicle Went Airborne)** must only be used if the officer indicates by narrative or diagram that the vehicle left the ground (excludes vehicles leaving the ground during a rollover event). Examples: the vehicle drove off a cliff, the vehicle was launched into the air after striking another vehicle or after traversing a berm.

**69 (Re-entering Roadway)** is used when a vehicle that departed the roadway portion of the trafficway returns to **the same roadway** (e.g., a motor vehicle in-transport runs off the roadway

right, strikes the guardrail face, then re-enters the roadway and collides with another motor vehicle in transport). This attribute does not apply to the “load” in cases involving AREAS OF IMPACT [18 \(Cargo/Vehicle Parts Set in Motion\)](#) or [19 \(Other Objects or Person Set in Motion\)](#).

**70 (Non-harmful, Swaying Trailer/Jackknife)** applies to a condition that occurs to an articulated vehicle (any vehicle with a trailing unit(s) connected by a hitch; truck tractor or single-unit truck with one or more trailers, articulated bus, or a car pulling a boat on a trailer, etc.) while in motion. The condition reflects a loss of control of the vehicle by the driver in which the trailer(s) yaws from its normal straight-line path behind the power unit.

**60 (Cargo/Equipment Loss or Shift [non-harmful])** refers specifically to the loss or shift of items carried on or in a motor vehicle or its trailing unit, that does not cause damage and/or injury to the vehicle, its occupants, its parts, trailing unit, or the cargo itself. Codes **60** and [54](#) can be used sequentially. For example, Vehicle 1’s cargo falls off and strikes Vehicle 2. Code **60** is used to show the non-harmful cargo shift that led up to the set in motion collision event of code [54](#).

However, this attribute should never be used:

1. to refer to a “collision” event (see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport\)](#)). In other words, code 60 should not be used instead of code 54.
2. to refer to a harmful event related to the loss or shift of cargo in/on a vehicle causing damage to that vehicle, its cargo, or injury to its occupants (see [72 \(Cargo/Equipment Loss, Shift, or Damage \[harmful\]\)](#)).

**Examples:**

- A load of logs on a truck tractor semi-trailer shifts as the truck rounds a curve resulting in an overturn. The shift of the load of logs would be a **60 (Cargo/Equipment Loss or Shift [non-harmful])**.
- A spare tire falls from a vehicle. The loss of the spare tire would be a **60 (Cargo/Equipment Loss or Shift [non-harmful])**.
- An axle on a vehicle breaks and the wheel then separates from the vehicle would be a [\(61 \(Equipment Failure\)\)](#).

**Non-Collision events involving motorcycles and vehicles with a “load”:**

Non-Collision events may occur before or after a collision event. They should not be coded as a separate event if they occur as part of a collision event.

**Examples:**

- A motorcycle strikes a deer, overturns and the rider becomes separated from the vehicle. Code the collision event, not the non-collision “[Rollover/Overturn](#)” and “[Fell/Jumped from Vehicle](#)” that occur as part of the collision event.
- One truck tractor/trailer rear-ends another truck tractor/trailer. The impact pushes the lead vehicle’s load into the back of the truck tractor cab with part falling onto the

roadway. Code the collision event, not the non-collision “[cargo-loss or shift](#)” that occurred as part of the collision event.

### **Non-Collision Harmful Events:**

**01 (Rollover/Overturn)** is used when a motor vehicle rotates (rollover) at least one quarter turn onto its side or end.

#### **NOTES regarding 01 (Rollover/Overturn):**

- For motorcycles, laying the motorcycle down on its side is sufficient to use attribute **01 (Rollover/Overturn)** as a harmful event if damage or injury is produced, even though the data element [ROLLOVER](#) is not applicable to motorcycles.
- Every vehicle that overturns will have contact with the ground. The collision event [58 \(Ground\)](#) should not be used in describing a non-collision **01 (Rollover/Overturn)** event. For example: A vehicle’s tires furrow into soft soil causing the vehicle to roll. The harmful event is **01 (Rollover/Overturn)**. If the report identifies the vehicle “struck” the ground, and that harmful collision event caused the vehicle to roll, the events are [58 \(Ground\)](#), **01 (Overturn/Rollover)**. Note this will give you a Level 2 edit check. If overriding the edit check, be specific in your override remarks.
- The only instances [67 \(Airborne\)](#) should be used immediately prior or immediately after **01 (Rollover/Overturn)** is if the officer identifies “airborne” as defined in this element. Note this will give you a Level 2 edit check. If overriding the edit check, be specific in your override remarks.
- A vehicle rolls over 3 quarter turns. This is one rollover event involving 3 quarter turns.
- If there is a **01 (Rollover/Overturn)** that begins in another location but involves a ditch or embankment in the case (e.g., “rolled through the ditch,” “rolled down the embankment,” “came to rest against the embankment”), then the rule applies where if there is no damage associated with an impact with the fixed object during the rollover, it is not included in the CRASH EVENTS. If there is indication that damage resulted from an impact with the fixed object, it is included in the CRASH EVENTS. This follows the same logic as striking a tree or another vehicle during an overturn.
- For a vehicle that rolls over, impacts a fence, and continues to rollover: only two events would be coded for that circumstance. The first event would be the rollover followed by an impact with the fence. For more than one rollover event to appear in a vehicle’s SEQUENCE OF EVENTS, the vehicle must return to its wheels, and track for a period of time before experiencing a separate rollover event. This would be a rare occurrence and must be clearly identified in the case material.

**Note:** For *vehicles* with attached *trailing unit(s)* by fixed *or non-fixed* linkage, when either the power unit or the *trailing unit(s)* rolls over, the entire vehicle will be considered a rollover. *This applies to all motor vehicles with any type of trailing unit(s). If a motorcycle is pulling a trailing unit that overturns, the motorcycle should have 01 (Rollover/Overturn) in its Crash Events. However, since the power unit is a motorcycle, the element [ROLLOVER](#) still does NOT apply.*

**02 (Fire/Explosion)** is used for a vehicle fire or explosion that occurs during the crash sequence or as a result of the crash.

As it pertains to the occurrence of **02 (Fire/Explosion)**, the crash circumstances are not considered stabilized until the threat of damage to this vehicle, or injury consequences to this vehicle's occupants, has ceased. Therefore, the crash sequence is not considered stabilized until all occupants have exited the vehicle and the scene has been declared safe by police or other authority. Fires that occur at a later time to vehicles abandoned at the scene (in open fields, on hillsides, etc.), or to vehicles removed from the scene to another location (tow yard, curbside, etc.), are not considered part of the crash sequence.

**03 (Immersion or Partial Immersion)** is used when an in-transport motor vehicle enters a body of water and results in injury or damage. This code would also be used if the vehicle came to rest in water and the depth cannot be ascertained from case material. **NOTE:** In immersion fatalities, the injury to the person may be noted as "drowning."

**04 (Gas Inhalation)** includes injury or death as a result of toxic fumes, such as carbon monoxide fumes leaking from a motor vehicle in-transport.

**51 (Jackknife [harmful to this vehicle])** applies to a condition that occurs to an articulated vehicle (any vehicle with a trailing unit(s) connected by a hitch; truck tractor or single-unit truck with one or more trailers, articulated bus, car pulling a boat on a trailer, etc.) while in motion. The condition reflects a loss of control of the vehicle by the driver in which the trailer(s) yaws from its normal straight-line path behind the power unit, striking the power unit, causing damage to the power unit or trailer. Jackknife should only be coded as a harmful event if there is clear indication of damage to the jackknifed vehicle or injury to its occupants caused by the jackknife.

**06 (Injured in Vehicle [Non-Collision])** is used when an occupant is injured during an unstabilized situation without a collision, excluding cargo/equipment loss or shift. Examples: Driver slams on brake, causing an unrestrained passenger to be injured. Driver makes a sharp turn causing driver to strike head on side window, knocking driver unconscious.

**44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])** is used when the pavement surface irregularity is on a paved surface. Other examples include indication of contact with a dip, depression, low spot, trough, etc. If the impact is with a surface irregularity (e.g., ruts, potholes) not on a paved surface, use **58 (Ground)**. For a vehicle that "bottoms out" on the paved surface (causing damage) due to speed, but not because of a pavement surface irregularity, use attribute **07 (Other Non-Collision)**.

**07 (Other Non-Collision)**. Non-collision not captured in the listed non-collision attributes.

**Examples:**

- Damage to the vehicle produced by its own dislodged vehicle parts (including hood flying up and contacting the windshield).
- A vehicle "bottoms out" (causing damage) due to speed but not because of a pavement surface irregularity. Damage due to pavement surface irregularities should be coded **44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])**.

**16 (Thrown or Falling Object)** is used when any object (1) is thrown (intentionally or unintentionally) and impacts an in-transport vehicle, or (2) falls onto, into, or in the path of an in-transport motor vehicle. If a tree limb falls from a tree and is contacted by a car, enter **16**

**(Thrown or Falling Object).** If a person maliciously throws an object off an overpass into traffic below, enter **16 (Thrown or Falling Object)**. This excludes contacts made by loads or objects set in motion by a motor vehicle (see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport\)](#)).

**72 (Cargo/Equipment Loss, Shift, or Damage [harmful])** refers specifically to the loss or shift of items carried on or in a motor vehicle or its trailing unit, causing damage and/or injury to the vehicle, its occupants, its parts, trailing unit, or the cargo itself. Harm can be measured in loss of monetary value from unrecoverable cargo loss as well as physical damage. This attribute should never be used to refer to a “collision” event (see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport\)](#)).

**Examples:**

- A pickup truck brakes rapidly to avoid a collision. This causes a piece of lumber in the pickup bed to smash through the rear window.
- Unsecured cargo shifts inside a box truck and bursts through the wall of the trailer.
- Pallets of beehives on a flatbed truck fall off the truck on a sharp curve causing the hives to open and the bees to fly away.

**Notes:**

In situations when a cargo shift is part of a collision event, the cargo shift is not coded separately. See [Non-Collision events involving motorcycles and vehicles with a “load.”](#)

- Unsecured cargo shifts inside a box truck causing a loss of control. The driver overcorrects, driving off the road. This would be a [60 \(Cargo/Equipment Loss or Shift \[non-harmful\]\)](#).
- Use [07 \(Other Non-Collision\)](#) in a situation where a motor vehicle in-transport is towing another unit (motor vehicle, trailer, etc.) and the second unit collides into the back of the power unit (not a Jackknife or part of a collision event).

**05 (Fell/Jumped from Vehicle)** is used when an occupant of this vehicle falls or jumps (not suicide) from the vehicle causing injury. For example, an occupant of a motor vehicle in-transport leans against the car door, it opens and the occupant falls out; or a person riding on a vehicle’s exterior (hood, roof, running board, etc.) falls or jumps, and is injured by the fall. If an occupant falls or jumps from a vehicle and is struck by that vehicle, use this attribute.

### ***Collision With Motor Vehicle In-Transport:***

**12 (Motor Vehicle In-Transport)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact within the trafficway boundaries. In-transport means that the motor vehicle is in motion or on the roadway portion of a trafficway.

**54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact by something set in motion by one or both of the vehicles.

In crashes involving harmful events caused by objects set in motion by a motor vehicle in-transport, remember that a vehicle's load is considered to be part of the vehicle.

#### **Examples:**

- If cargo falls from a truck (in-transport) and strikes another motor vehicle **in-transport**, this is treated as a two-vehicle crash. Therefore, the proper code for both vehicles is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the AREA OF IMPACT (THIS VEHICLE) column is coded [18 \(Cargo/Vehicle Parts Set in Motion\)](#).
- If an **in-transport** vehicle strikes an at-rest object that was previously cargo or part of another motor vehicle in-transport, the SEQUENCE OF EVENTS for that event is [73 \(Object That Had Fallen from Motor Vehicle In-Transport\)](#). If that object is then propelled into another motor vehicle in-transport, the proper SEQUENCE OF EVENTS attribute for this next event is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the AREA OF IMPACT (THIS VEHICLE) column is coded [19 \(Other Objects or Person Set in Motion\)](#).
- If an **in-transport** vehicle strikes an at-rest object that was not cargo or part of another motor vehicle in-transport, the SEQUENCE OF EVENTS for that event is [18 \(Other Object \[Not Fixed\]\)](#). If that object is then propelled into another motor vehicle in-transport, the proper SEQUENCE OF EVENTS code for this next event is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** and the AREA OF IMPACT (THIS VEHICLE) column is coded [19 \(Other Objects or Person Set in Motion\)](#).

This attribute does not apply when the cargo, people, or objects set in motion by an in-transport motor vehicle strikes something other than another in-transport motor vehicle. In this case, use the applicable "[collision with non-fixed object](#)," or "[collision with fixed object](#)" code for the object struck by the cargo, person, or object set in motion.

### Examples:

- If cargo falls from a truck (in-transport) and strikes another vehicle that is not in-transport, the proper SEQUENCE OF EVENTS attribute is **14 (Parked Motor Vehicle)** or **45 (Working Motor Vehicle)** depending on which type of not in-transport vehicle was contacted by the load and the AREA OF IMPACT (THIS VEHICLE) column is coded **18 (Cargo/Vehicle Parts Set in Motion)**.
- If cargo falls from a truck (in-transport) and strikes a pedestrian, the proper SEQUENCE OF EVENTS attribute would be **08 (Pedestrian)** and the AREA OF IMPACT (THIS VEHICLE) column is coded **18 (Cargo/Vehicle Parts Set in Motion)**.
- If a pedestrian is struck by an at-rest object propelled by an in-transport vehicle (parked motor vehicle, stop sign, etc.), the proper SEQUENCE OF EVENTS attribute for this harmful event is **08 (Pedestrian)** and the AREA OF IMPACT (THIS VEHICLE) column is coded **19 (Other Objects or Person Set in Motion)**.

**55 (Motor Vehicle in Motion Outside the Trafficway)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact outside the trafficway boundaries in a motor vehicle traffic crash.

### Example:

A vehicle loses control attempting to turn into a gas station and strikes another vehicle pulling away from the pump in the station lot.

### ***Collision With Object Not Fixed:***

**08 (Pedestrian)** is used for all those not on a personal conveyance. A person pushing a vehicle should be coded **08 (Pedestrian)**. A person being carried by another person should also be considered a **08 (Pedestrian)**.

**09 (Pedalcyclist)** is used for any person on a non-motorized other road vehicle propelled by pedaling. Examples include a bicycle, tricycle, unicycle, or pedal car.

If a non-motorist is hit as a result of a vehicle to vehicle collision and you cannot reasonably determine which vehicle struck the non-motorist, use the lowest vehicle number of the MVIT(s) involved in the vehicle to vehicle event that resulted in the pedestrian or pedalcyclist collision. In the element **RELATED FACTORS - PERSON (NOT A MOTOR VEHICLE OCCUPANT) LEVEL**, code **031 Default Code Used for Vehicle Numbering**.

**10 (Railway Vehicle)** is any land vehicle that is (1) designed primarily for, or in use for, moving people or property from one place to another on rails and (2) not in use on a land way other than a railway.

- Inclusions: Railway Trains, Streetcar/trolley on private way.
- Exclusions: Streetcar/trolley operating on trafficway.

**74 (Road Vehicle on Rails)** is any land vehicle on rails operating in a trafficway.

- Inclusions: Streetcar/trolley operating on trafficway.
- Exclusions: Railway Trains, Streetcar/trolley on private way, Streetcar/trolley or electric bus operating on tires.

**11 (Live Animal)** is used for collisions with live animals (domesticated or wild) that are not themselves being used as transportation or to draw a wagon, cart, or other transport device (see [ANSI D16.1](#)). Default to **11 (Live Animal)** if it cannot be determined if the struck animal is alive, dead, or if it was being ridden or drawing a transport device.

**49 (Ridden Animal or Animal-Drawn Conveyance)** is used for ridden animals and animals drawing transport devices. See **18 (Other Object [Not Fixed])** for an animal carcass.

**18 (Other Object [Not Fixed])** is used when a motor vehicle in-transport strikes a non-fixed object that is known NOT to have been the cargo or part of another motor vehicle in-transport, or when it is UNKNOWN whether the object was the cargo or part of another motor vehicle in-transport (i.e., refers to objects such as a dead body, animal carcass, construction cones or barrels, an unattached trailer, a bicycle without a rider, downed tree limbs or power lines, or debris from a prior crash). For objects that have become separated from a motor vehicle in-transport not as a result of a prior crash, use attribute [73 \(Object That Had Fallen from Motor Vehicle In-Transport\)](#).

**15 (Non-Motorist on Personal Conveyance)** is used for pedestrians using personal conveyances. A personal conveyance is a device, other than a transport device, used by a pedestrian for personal mobility assistance or recreation. These devices can be motorized or human powered, but not propelled by pedaling.

**Inclusions:**

1. Rideable toys
  - a. Roller skates, in-line skates
  - b. Skateboards
  - c. Skates
  - d. Baby carriage
  - e. Scooters
  - f. Toy wagons
2. Motorized rideable toys
  - a. Motorized skateboard
  - b. Motorized toy car
  - c. *Motorized kick scooter*

3. Devices for personal mobility assistance
  - a. ***Self-balancing personal conveyance (e.g., Segway-style device)***
  - b. Motorized and non-motorized wheelchair
  - c. ***Mobility aid*** scooters

**Exclusions:**

1. Golf cart
2. Low-speed vehicles (LSVs)
3. Go-carts
4. Minibike
5. “Pocket” motorcycles
6. Motor scooters
7. Moped

**14 (Parked Motor Vehicle)** is used when the impact occurred between a motor vehicle in-transport and a motor vehicle neither on a roadway nor in motion. A vehicle stopped off the roadway, its door open over a roadway, is not in-transport.

**45 (Working Motor Vehicle)** is used to indicate the motor vehicle contacted was in the act of performing construction, maintenance, or utility work related to the trafficway when it became an involved unit. The vehicle should be known to be in the act of performing work. This “work” may be located within open or closed portions of the trafficway and motor vehicles performing these activities can be within or outside the trafficway boundaries. This code does not include private construction/maintenance vehicles, or vehicles such as garbage trucks, delivery trucks, taxis, emergency vehicles, tow trucks, etc. **DO NOT evaluate this attribute on NCSA Body Type alone.**

**Examples:**

1. Asphalt/steam roller working in a highway construction zone paving the roadway or flattening dirt.
2. State highway maintenance crew painting lane lines on the road, mowing grass on the roadside or median, repairing potholes, removing debris from the roadway, etc.
3. Utility truck or a “cherry picker,” performing maintenance on power lines along the roadway or maintaining a traffic signal.
4. A private excavating company contracted by the State digging the foundation for a new overpass.
5. A State, county, or privately-owned snowplow, plowing ice/snow as part of a highway maintenance activity.
6. Street sweeper sweeping the street.

7. A vehicle in a mobile work convoy displaying arrow boards or other signaling devices warning motorists of the work activity.
8. A law enforcement vehicle that is participating strictly in a stationary construction or mobile maintenance activity as a traffic slowing, control, signaling, or calming influence.

#### **FARS SPECIAL INSTRUCTION:**

**NOTE:** Code “45” excludes working activities other than highway construction, maintenance, or utility vehicles (garbage truck picking up trash, mail/delivery trucks while making deliveries, personal vehicles plowing snow, etc. These are considered motor vehicles In-transport). Use RELATED FACTORS-VEHICLE LEVEL code [042 \(Other Working Vehicle \[Not Construction, Maintenance, Utility, Police, Fire, or EMS Vehicle\]\)](#) to identify these vehicles.

A question may arise when a police, fire, or emergency medical vehicle is struck on the roadway while at the scene of a crash, at a traffic stop, or as traffic control. The question becomes, “has its function changed from being a motor vehicle in-transport to a working vehicle?” The answer is “no.” Treat these situations as a motor vehicle in-transport striking another motor vehicle in-transport. Use RELATED FACTORS-VEHICLE LEVEL code [041 \(Police, Fire, or EMS Vehicle Working at the Scene of an Emergency or Performing Other Traffic Control Activities\)](#) to identify that this vehicle was struck while performing these work activities.

**73 (Object That Had Fallen from Motor Vehicle In-Transport)** is used when a motor vehicle in- transport impacts a non-fixed object at rest that is known to have been the cargo or part of another motor vehicle in-transport. Do not use this attribute for debris from a prior crash. This attribute does not include vehicle occupants that are ejected or fall from a motor vehicle in-transport (e.g., a motorcycle operator falling from a motorcycle.) For people falling from a motor vehicle, see non-collision event [05 \(Fell/Jumped From Vehicle\)](#). For impacts involving two motor vehicles in-transport resulting from cargo, people, or objects set in motion, see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by another Motor Vehicle In-Transport\)](#). For at rest detached trailers (e.g., a detached semi-trailer), use attribute [18 \(Other Object \[Not Fixed\]\)](#). If cargo fell from a vehicle, came to rest, and was struck, this attribute would apply. If the cargo was at rest as a result of a prior crash, use attribute [18 \(Other Object \[Not Fixed\]\)](#).

**91 (Unknown Object Not Fixed)** is used when the event involves an object that is known to be not fixed but the case material does not identify the specific object.

#### ***Collision With Fixed Object:***

The attributes [58 \(Ground\)](#), [33 \(Curb\)](#), [34 \(Ditch\)](#), and [35 \(Embankment\)](#) are grouped under the Collision With Fixed Object subset because they are intended to be harmful events in the crash (i.e., they are associated with an impact that produces injury or damage).

When coding these events there must be fields on the police crash report or verbiage in the narrative such as “struck,” “hit,” “impacted,” etc. that identify these as harmful.

For cases where the indication of the harmful event came from the narrative, there may not be a corresponding indication of damage in any police crash report field. In these instances, code the

harmful event as stated in the narrative and include the corresponding attribute under [AREAS OF IMPACT](#).

If there is no indication of damage from contact with the fixed object in fields on the police crash report and the narrative language does not identify it as a harmful event (e.g., “came to rest on the embankment,” “drove through” or “drove across” the ditch and/or the embankment, or “drove over” the curb), do not code [33 \(Curb\)](#), [34 \(Ditch\)](#), or [35 \(Embankment\)](#) in the SEQUENCE OF EVENTS.

**17 (Boulder)** is a rock of sufficient mass that when struck by a motor vehicle moves very little and remains basically intact.

**19 (Building)** is used when the vehicle impacts a roofed and walled structure built for permanent use. The type of construction material used is not of interest, nor is the use of the building.

**58 (Ground)** is used when the impact is with an earthen or paved surface off the roadway. **58 (Ground)** is not to be entered when the harmful event is [01 \(Rollover/Overturn\)](#).

Indication of furrowing, gouging, or digging in of the tires/wheels is not sufficient to code the collision event **58 (Ground)**. For example, if the police crash report narrative states “the truck’s tires dug into the turf causing the vehicle to rollover,” the harmful event should be [01 \(Rollover/Overturn\)](#).

**20 (Impact Attenuator/Crash Cushion)** is a device for controlling the absorption of energy released during vehicle collision (crash cushion). Its most common application involves the protection of fixed roadside objects such as bridge piers, elevated gores at exit ramps, etc. Examples include barrels filled with water or sand, and plastic collapsible structures.

**50 (Bridge Overhead Structure)** is used when striking the bottom of a bridge while traveling underneath it. See [Figure 20](#).

**21 (Bridge Pier or Support)** is a square or round column of stone, concrete, brick, steel, or wood for supporting a bridge between abutments. This attribute includes the bridge abutments that are supporting the ends of a bridge. Abutments are generally designed for retaining or supporting the embankment under bridge ends and composed of stone, concrete, brick, or wood (includes the wing-walls). See [Figure 20](#).

**23 (Bridge Rail [Includes Parapet])** is a wooden, brick, stone, concrete, or metal fence-like structure that runs along the outermost edge of the roadway or sidewalk on the bridge, or a rail constructed along the top of a parapet. Balustrade is often used synonymously with parapet. See [Figure 20](#).

- Bridges do not need to support another roadway. It may be an overpass for a train or even for a viaduct (water conduit).

Figure 20: Bridge Components Diagram

**24 (Guardrail Face)** is a low barrier that has the primary longitudinal structure composed of metal (plates, mesh, box beam, etc.). A guardrail is differentiated from **25 (Concrete Traffic Barrier)** by the material making up the greatest part of the longitudinal portion of the structure. In the case of guardrails, this is metal whereas in concrete barriers this is concrete (including concrete rails). If the crash report does not differentiate between guardrail face and end, default to guardrail face.

Guardrails that serve as bridge rails should be coded as **23 (Bridge Rail [Includes Parapet])**.

**52 (Guardrail End)** is coded if a vehicle strikes the end of a guardrail. Guardrails can have a separate flat or rounded piece of metal attached to the end of an expanse of guardrail face.

**25 (Concrete Traffic Barrier)** refers to the longitudinal traffic barriers constructed of concrete. This includes all temporary concrete barriers regardless of location (i.e., temporary Jersey Barrier on a bridge being used to control traffic during bridge repair/construction). Concrete walls (vertical side surfaces) do not apply here (see **39 (Wall)**).

**57 (Cable Barrier)** refers to a flexible barrier system that uses several cables typically supported by steel posts. These barriers are designed to help lessen impact or keep vehicles within the confines of the road.

**26 (Other Traffic Barrier)** is used for all other longitudinal barriers such as wood or rock.

**59 (Traffic Sign Support)** is used when the post supporting a traffic sign, or the sign itself, is hit by a motor vehicle in-transport. This includes mile marker posts and elevated signs.

**46 (Traffic Signal Support)** is used when the post supporting a traffic signal, or the signal itself, is hit by a motor vehicle in-transport. **Use 46 (Traffic Signal Support) for a railroad crossing arm/gate.**

**30 (Utility Pole/Light Support)** refers to supports for highway lighting systems, not including other private lighting systems (e.g., parking lot lights). **30 (Utility Pole/Light Support)** is used for electrical, telephone, cable, and other utility pole-type supports.

**31 (Other Post, Other Pole, or Other Supports)** is used for posts other than highway signs, utility poles, or light supports (reflectors on poles alongside of roadway, parking meters, flag poles, etc.). For mailbox posts, use [53 \(Mailbox\)](#). For fence posts, use [38 \(Fence\)](#).

**32 (Culvert)** is a man-made drain or channel crossing under a road, sidewalk, etc.

**33 (Curb)** is a concrete or asphalt structure that borders the paved surface. It provides drainage control and pavement edge delineation. The face of the curb may be sloped or vertical. Ensure that the police crash report provides some indication that damage has occurred when a vehicle strikes a curb. This attribute includes collisions with curbing that forms raised islands, medians, or separators. For example, if the report identifies the vehicle struck/collided with a traffic island, channelizing island, raised median, or separator use **33 (Curb)** not [43 \(Other Fixed Object\)](#).

**34 (Ditch)** includes any man-made structure for drainage purposes. A ditch ends where a culvert begins and resumes on the opposite side of the culvert. Reference to a “ditchbank,” “embankment of the ditch,” or “ditch embankment” should be coded under **34 (Ditch)**.

**35 (Embankment)** is a raised structure to hold back water, to carry a roadway, or the result of excavation or washout (including erosion) that may be faced with earth (or rock, stone, or concrete). A **35 (Embankment)** can usually be differentiated from a [39 \(Wall\)](#) by its incline whereas a wall is usually vertical. However, there are exceptions to this, such as a retaining wall that may be inclined or a vertical embankment that is caused by a natural event such as a washout.

In crashes involving a field approach or driveway crossing, use attribute **35 (Embankment)** when no specific components (e.g., culverts or ditches) are identified.

**38 (Fence)** includes the fence posts. A Fence can be made of wood, chain link, stone, etc.

**39 (Wall)** is a primarily vertical structure composed of concrete, metal, timber, or stone that is not part of a building or a fence but typically is used for retaining earth, abating noise, and separating areas (but not for containment as in the primary function of a fence). Also included as a **39 (Wall)**, are headwalls (or endwalls) that are sometimes provided on culvert ends principally to protect the sides of the embankment around the culvert opening against erosion. This does not include wing-walls, which are attached to ends of bridge abutments and extend back at an angle from the roadway. Wingwalls should be coded as [21 \(Bridge Pier or Support\)](#).

**40 (Fire Hydrant)** refers to the roadside device used by fire departments to provide water for fighting fires. Usually made of steel, these devices are also referred to as fire plugs or fire standpipes in some areas.

**41 (Shrubbery)** refers to vegetation that is usually of a woody, multi-stemmed variety and in most instances, is low growing rather than tall. May also be called bushes. Some common examples are boxwood, hawthorn, and mountain laurel.

**42 (Tree [Standing Only])** is used when a vehicle strikes a standing tree. This includes impacts from overhanging branches, tree stumps, or large cactus (Saguaro). If a vehicle strikes a fallen

tree, use [18 \(Other Object \[Not Fixed\]\)](#). If a tree falls on a vehicle as it is passing by, use [16 \(Thrown or Falling Object\)](#).

**48 (Snow Bank)** is used when snowfall and/or road plowing creates essentially fixed barriers of snow/ice that are not snow-covered earth or rock embankments.

**53 (Mailbox)** refers to a private residence mail/newspaper box including the post. A cluster of private mailboxes is included in this attribute. This attribute does not include U.S. Mailboxes, which are typically blue and are for general public use. Code a U.S. Mailbox as [43 \(Other Fixed Object\)](#).

**43 (Other Fixed Object)** is used when the object is fixed (considered a permanent structure) and is not described by any of the other fixed object attributes. This attribute excludes collisions with curbing that forms raised islands, medians, or separators (see [33 \(Curb\)](#)).

**Examples:**

- Bus shelters.
- Pedestrian walkways.
- Toll booths.
- Guy wires supporting utility poles.
- U. S. Mailbox for public use.

Other examples would include property damage to standing crops, yards, and other vegetation (excluding: [41 \(Shrubbery\)](#), [42 \(Tree \[Standing Only\]\)](#), and [58 \(Ground\)](#)) if noted on the crash report.

When the case material identifies a non-specific object impact, apply the following guidelines. If the case material only identifies the harmful event as:

- “Fixed Object,” then use **43 (Other Fixed Object)**.
- “Sign,” then use [59 \(Traffic Sign Support\)](#).
- “Post,” then use [31 \(Other Post, Other Pole, or Other Supports\)](#).
- “Signpost,” then use [59 \(Traffic Sign Support\)](#).
- “Bridge,” then use [23 \(Bridge Rail \[Includes Parapet\]\)](#) when the vehicle is on top of the bridge. When the vehicle is going under the bridge, use [21 \(Bridge Pier or Support\)](#).
- “Barrier,” then use [26 \(Other Traffic Barrier\)](#).

**93 (Unknown Fixed Object)** is used when the event involves an object that is known to be fixed but the case material does not identify the specific object.

### **Not Reported/Unknown**

**98 (Harmful Event, Details Not Reported)** is used when a harmful event was reported but the object classification was not reported. **Check to see if [91 \(Unknown Object Not Fixed\)](#), [93 \(Unknown Fixed Object\)](#), or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.**

**99 (Reported as Unknown)** is used when police indicate unknown.

### **Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>THEN</b>                                                 |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| 1Z0N            | SEQUENCE OF EVENTS for this vehicle should not include more than one occurrence of 01. Please see SEQUENCE OF EVENTS remarks for <a href="#">01 (Rollover/Overturn)</a> to confirm coding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | --                                                          |

| 93    | <a href="#">Unknown Fixed Object</a> |

### **Not Reported/Unknown**

| Codes | Attributes                                          |
|-------|-----------------------------------------------------|
| 98    | <a href="#">Harmful Event, Details Not Reported</a> |
| 99    | <a href="#">Reported as Unknown</a>                 |

**Definition:** This element identifies the event that resulted in the most severe injury or, if no injury, the greatest property damage involving this motor vehicle.

**Remarks:** Must be the major event **FOR THIS VEHICLE**, even if different from the [FIRST HARMFUL EVENT](#). **Code for each vehicle. May be different for each vehicle.**

#### **Code using the following hierarchy:**

Fatalities/injuries to non-occupants are attributed to the vehicle that struck them when applying this hierarchy.

#### **A. FATALITIES take precedence over INJURIES.**

1. If this vehicle is involved in more than one event that causes fatality to its own occupants or to people not in a motor vehicle, choose the event that causes the greatest number of fatalities to occupants of this vehicle or to people not in a motor vehicle (not occupants of other vehicles). For example, if there are fatalities to non-occupants and vehicle occupants in separate events, the greater number of fatalities is more harmful.
2. If this vehicle is involved in more than one event that causes fatality to its own occupants or to people not in a motor vehicle; and if there are an equal number of fatalities in each such event, choose the fatal event that is worst with respect to other injuries and property damage. For example, if there are equal numbers of fatalities in each event, the event that also has additional injuries/damage is more harmful.
3. As a last resort choose the fatal event that occurred first, timewise.

**B. INJURIES take precedence over PROPERTY DAMAGE.**

1. If the vehicle is not involved in events that cause fatality to its occupants or to people not in a motor vehicle, choose the event that produces the worst injury.
2. If in doubt, choose the event with the greatest number of injuries.
3. If in doubt, choose the event that occurred first, timewise.

**C. If only PROPERTY DAMAGE results for this vehicle:**

1. Choose the event causing the most damage.
2. If in doubt, choose the event that happened first, timewise.

***Non-Collision Most Harmful Events:***

**Non-Collision events involving motorcycles and vehicles with a “load”:**

Non-Collision events may occur before or after a collision event. They should not be coded as a separate event if they occur as part of a collision event.

**Examples:**

- A motorcycle strikes a deer, overturns, and the rider becomes separated from the vehicle. Code the collision event, not the non-collision “Rollover/Overturn” and “Fell/Jumped from Vehicle” that occur as part of the collision event.
- One truck tractor/trailer rear-ends another truck tractor/trailer. The impact pushes the lead vehicle’s load into the back of the truck tractor cab with part falling onto the roadway. Code the collision event, not the non-collision “cargo-loss or shift” that occurred as part of the collision event.

**Most Harmful Event Coding Procedures for Parked and Working Motor Vehicles**

1. If the MOST HARMFUL EVENT for a parked/working motor vehicle is an impact with a motor vehicle in-transport, use [12 \(Motor Vehicle In-Transport\)](#).
  - a. **Example:** A parked motor vehicle (V2) is struck by an in-transport motor vehicle (V1) and this is the MOST HARMFUL EVENT for the parked motor vehicle (V2). The MOST HARMFUL EVENT for the parked motor vehicle (V2) is [12 \(Motor Vehicle In-Transport\)](#).
2. If the MOST HARMFUL EVENT for a parked/working motor vehicle is an impact with something after it has been set in motion, code that other thing.
  - a. **Example:** In a chain reaction crash, an in-transport motor vehicle (V1) strikes a parked motor vehicle (V2) injuring the person sitting in the driver’s seat of V2. The parked motor vehicle (V2) is pushed into an unoccupied motor vehicle (V3) and the parked motor vehicle (V3) strikes and kills a pedestrian. The MOST HARMFUL EVENT for parked motor vehicle (V3) is [08 \(Pedestrian\)](#).
3. If the MOST HARMFUL EVENT for a parked/working motor vehicle is an impact with anything set in motion except another parked or working motor vehicle, see attribute [12 \(Motor Vehicle In-Transport\)](#).

4. If the MOST HARMFUL EVENT for a parked/working motor vehicle is an impact with another parked or working motor vehicle that has been set in motion, use [14 \(Parked Motor Vehicle\)](#) or [45 \(Working Motor Vehicle\)](#), whichever describes the object set in motion.
5. The MOST HARMFUL EVENT for a parked/working motor vehicle can be a non-collision harmful event not recorded in the CRASH EVENTS list. For example, if a parked vehicle rolls over after an impact with an in-transport motor vehicle and the MOST HARMFUL EVENT is the rollover, then use code [01 \(Rollover/Overturn\)](#).
  - a. **Example:** A parked motor vehicle (V2) is struck by an in-transport vehicle (V1). The parked motor vehicle (V2) is pushed down an embankment and rolls over. The case material indicate the most harmful event for the parked motor vehicle (V2) is the rollover. The MOST HARMFUL EVENT for the parked motor vehicle (V2) is [01 \(Rollover/ Overturn\)](#).

**01 (Rollover/Overturn)** is used when a motor vehicle rotates (rollover) at least one quarter turn onto its side or end. For motorcycles, laying the motorcycle down on its side is sufficient to code **01 (Rollover/ Overturn)** as a harmful event if damage or injury is produced, even though the data element [ROLLOVER](#) is not applicable to motorcycles.

If there is a **01 (Rollover/Overturn)** that begins in another location but involves a ditch or embankment in the case (e.g., “rolled through the ditch,” “rolled down the embankment,” “came to rest against the embankment”), then the rule applies where if there is no damage associated with an impact with the fixed object during the rollover, it is not included in the CRASH EVENTS. If there is indication that damage resulted from an impact with the fixed object, it is included in the CRASH EVENTS. This follows the same logic as striking a tree or another vehicle during an overturn.

**Note:** For *vehicles* with attached *trailing unit(s)* by fixed *or non-fixed* linkage, when either the power unit or the *trailing unit(s)* rolls over, the entire vehicle will be considered a rollover. *This applies to all motor vehicles with any type of trailing unit(s). If a motorcycle is pulling a trailing unit that overturns, the motorcycle should have 01 (Rollover/Overturn) in its Crash Events. However, since the power unit is a motorcycle, the element [ROLLOVER](#) still does NOT apply.*

**02 (Fire/Explosion)** is used for a vehicle fire or explosion that occurs during the crash sequence or as a result of the crash.

As it pertains to the occurrence of **02 (Fire/Explosion)**, the crash circumstances are not considered stabilized until the threat of damage to this vehicle, or injury consequences to this vehicle’s occupants, has ceased. Therefore, the crash sequence is not considered stabilized until all occupants have exited the vehicle and the scene has been declared safe by police or other authority. Fires that occur at a later time to vehicles abandoned at the scene (in open fields, on hillsides, etc.), or to vehicles removed from the scene to another location (tow yard, curbside, etc.), are not considered part of the crash sequence.

**03 (Immersion or Partial Immersion)** is used when **a** motor vehicle enters a body of water and results in injury or damage. This code would also be used if the vehicle came to rest in water and the depth cannot be ascertained from case material. **NOTE:** In immersion fatalities, the injury to the person may be noted as “drowning.”

**04 (Gas Inhalation)** includes injury or death as a result of toxic fumes, such as carbon monoxide fumes leaking from a motor vehicle.

**51 (Jackknife [harmful to this vehicle])** applies to a condition that occurs to an articulated vehicle (any vehicle with a trailing unit(s) connected by a hitch; truck tractor or single-unit truck with one or more trailers, articulated bus, car pulling a boat on a trailer, etc.) while in motion. The condition reflects a loss of control of the vehicle by the driver in which the trailer(s) yaws from its normal straight-line path behind the power unit, striking the power unit, causing damage to the power unit or trailer. Jackknife should only be coded as a harmful event if there is clear indication of damage to the jackknifed vehicle or injury to its occupants caused by the jackknife.

**06 (Injured in Vehicle [Non-Collision])** is used when an occupant is injured during an unstabilized situation without a collision, excluding cargo/equipment loss or shift. Examples: Driver slams on brake, causing an unrestrained passenger to be injured. Driver makes a sharp turn causing driver to strike head on side window, knocking driver unconscious.

**44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])** is used when the pavement surface irregularity is on a paved surface. Other examples include indication of contact with a dip, depression, low spot, trough, etc.) If the impact is with a surface irregularity (e.g., ruts, potholes) not on a paved surface, use the [58 \(Ground\)](#). For a vehicle that “bottoms out” on the paved surface (causing damage) due to speed but not because of a pavement surface irregularity, use attribute **07 (Other Non-Collision)**.

**07 (Other Non-Collision).** Non-collision not captured in the listed non-collision attributes.

**Examples:**

- Damage to the vehicle produced by its own dislodged vehicle parts (including hood flying up and contacting the windshield).
- A vehicle “bottoms out” (causing damage) due to speed but not because of a pavement surface irregularity. Damage due to pavement surface irregularities should be coded **44 (Pavement Surface Irregularity [ruts, potholes, grates, etc.])**.

**16 (Thrown or Falling Object)** is used when any object: (1) is thrown (intentionally or unintentionally) and impacts **a** vehicle, or (2) falls onto, into, or in the path of **a** motor vehicle. If a tree limb falls from a tree and is contacted by a car, enter **16 (Thrown or Falling Object)**. If a person maliciously throws an object off an overpass into traffic below, enter **16 (Thrown or Falling Object)**. This excludes contacts made by loads or objects set in motion by a motor vehicle (see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport\)](#)).

**72 (Cargo/Equipment Loss, Shift, or Damage [harmful])** refers specifically to the loss or shift of items carried on or in a motor vehicle or its trailing unit, causing damage and/or injury to the vehicle, its occupants, its parts, trailing unit, or the cargo itself. Harm can be measured in loss of monetary value from unrecoverable cargo loss as well as physical damage. This attribute should never be used to refer to a “collision” event (see [54 \(Motor Vehicle In-Transport Strikes or is](#)

## Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)).

### **Examples:**

- A pickup truck brakes rapidly to avoid a collision. This causes a piece of lumber in the pickup bed to smash through the rear window.
- Unsecured cargo shifts inside a box truck and bursts through the wall of the trailer.
- Pallets of beehives on a flatbed truck fall off the truck on a sharp curve causing the hives to open and the bees to fly away.

### **Notes:**

In situations when a cargo shift is part of a collision event, the cargo shift is not coded separately. See [Non-Collision events involving motorcycles and vehicles with a “load.”](#)

- Unsecured cargo shifts inside a box truck causing a loss of control. The driver overcorrects, driving off the road. This would be a [60 \(Cargo/Equipment Loss or Shift \[non-harmful\]\)](#) in the [SEQUENCE OF EVENTS](#).
- Use [07 \(Other Non-Collision\)](#) in a situation where a motor vehicle in-transport is towing another unit (e.g., motor vehicle, trailer, etc.) and the second unit collides into the back of the power unit (not a Jackknife or part of a collision event).

**05 (Fell/Jumped from Vehicle)** is used when an occupant of this vehicle falls or jumps (not suicide) from the vehicle causing injury. For example, an occupant of a motor vehicle in-transport leans against the car door, it opens and the occupant falls out; or a person riding on a vehicle's exterior (hood, roof, running board, etc.) falls or jumps, and is injured by the fall. If an occupant falls or jumps from a vehicle and is struck by that vehicle, use this attribute.

### ***Collision With Motor Vehicle In-Transport:***

**12 (Motor Vehicle In-Transport)** is used when the most injury- or damage-producing event is two motor vehicles in-transport making contact within the trafficway boundaries.

#### **Parked and Working Motor Vehicles:**

This attribute is used for parked and working motor vehicles when their MOST HARMFUL EVENT is an impact with a motor vehicle in-transport.

This attribute also applies to parked and working motor vehicles when their MOST HARMFUL EVENT is an impact with any object set in motion other than another parked or working motor vehicle. Set in motion objects include cargo, people, stone, stop sign, tire tread, and debris from a previous impact. If the object set in motion is another parked or working motor vehicle use [14 \(Parked Motor Vehicle\)](#) or [45 \(Working Motor Vehicle\)](#), whichever describes the object set in motion.

### **Examples:**

- If the MOST HARMFUL EVENT for V1 (a motor vehicle in-transport) is when V1 impacts V2 (another motor vehicle in-transport) within the trafficway boundaries, then the MOST HARMFUL EVENT for V1 is [12 \(Motor Vehicle In-Transport\)](#).

- If the most harmful event for V2 (a parked motor vehicle) is when V2 is struck by V1 (a motor vehicle in-transport), then the MOST HARMFUL EVENT for V2 is [12 \(Motor Vehicle In-Transport\)](#).
- If the MOST HARMFUL EVENT for V2 (a parked motor vehicle) is when V2 is struck by a stop sign set in motion by V1 (a motor vehicle in-transport), then the MOST HARMFUL EVENT for V2 is [12 \(Motor Vehicle In-Transport\)](#).
- If V1 (a motor vehicle in-transport) strikes V2 (a parked motor vehicle) and V2 then strikes V3 (a parked motor vehicle), then the MOST HARMFUL EVENT for V3 is [14 \(Parked Motor Vehicle\)](#).

**54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** applies only to events involving two in-transport motor vehicles. It is used in two situations: **1)** The most harmful injury- or damage-producing event for an in-transport motor vehicle is when something it sets in motion (cargo, person, object) strikes another in-transport motor vehicle. **2)** The most harmful injury- or damage-producing event for an in-transport motor vehicle is when it is struck by cargo, people, or objects set in motion by another in-transport motor vehicle.

**Example:**

Cargo that fell from an in-transport motor vehicle (V1) is involved in an impact with V2, another in-transport motor vehicle. The case material indicate this is the most harmful event for both V1 and V2. MOST HARMFUL EVENT is **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** for both V1 and V2.

When selecting the MOST HARMFUL EVENT, **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** does not have to be the MOST HARMFUL EVENT for both vehicles.

**Example:**

Cargo that fell from an in-transport motor vehicle (V1) is involved in an impact with V2, another in-transport motor vehicle. This event is the only event for V1. Thus, **54 (Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by Another Motor Vehicle In-Transport)** is the MOST HARMFUL EVENT for V1. The case material identifies a subsequent impact by V2 with a tree as the MOST HARMFUL EVENT for V2. Thus, [42 \(Tree \[Standing Only\]\)](#) is the MOST HARMFUL EVENT for V2.

This attribute does not apply when the MOST HARMFUL EVENT for an **in-transport motor vehicle** is an impact between cargo, a person, or object it set in motion and something other than a motor vehicle in transport. In this case, use the “[collision with non-fixed object](#),” or “[collision with fixed object](#)” code that is applicable.

**Examples:**

- If the MOST HARMFUL EVENT for an in-transport motor vehicle is when cargo that fell off its trailer strikes a pedestrian, code [08 \(Pedestrian\)](#).

- If the MOST HARMFUL EVENT for an in-transport motor vehicle is when a parked motor vehicle it set in motion strikes a pedestrian, code [08 \(Pedestrian\)](#).
- If the MOST HARMFUL EVENT for an in-transport motor vehicle is when cargo that fell off its trailer strikes a parked motor vehicle, code [14 \(Parked Motor Vehicle\)](#).

**55 (Motor Vehicle in Motion Outside the Trafficway)** is used when the injury- or damage-producing event is two motor vehicles in-transport making contact outside the trafficway boundaries in a motor vehicle traffic crash.

**Example:**

A vehicle loses control attempting to turn into a gas station and strikes another vehicle pulling away from the pump in the station lot.

***Collision With Object Not Fixed:***

**08 (Pedestrian)** is used for all those not on a personal conveyance. A person pushing a vehicle should be coded **08 (Pedestrian)**. A person being carried by another person should also be considered a **08 (Pedestrian)**.

**09 (Pedalcyclist)** is used for any person on a non-motorized other road vehicle propelled by pedaling. Examples include a bicycle, tricycle, unicycle, or pedal car.

If a non-motorist is hit as a result of a vehicle to vehicle collision and you cannot reasonably determine which vehicle struck the non-motorist, use the lowest vehicle number of the MVIT(s) involved in the vehicle to vehicle event that resulted in the pedestrian or pedalcyclist collision. In the element [RELATED FACTORS - PERSON \(NOT A MOTOR VEHICLE OCCUPANT\) LEVEL](#) code [031 Default Code Used for Vehicle Numbering](#).

**10 (Railway Vehicle)** is any land vehicle that is (1) designed primarily for, or in use for, moving people or property from one place to another on rails and (2) not in use on a land way other than a railway.

- **Inclusions:** Railway Trains, Streetcar/trolley on private way.
- **Exclusions:** Streetcar/trolley operating on trafficway.

**74 (Road Vehicle on Rails)** is any land vehicle on rails operating in a trafficway.

- **Inclusions:** Streetcar/trolley operating on trafficway.
- **Exclusions:** Railway trains, streetcar/trolley on private way, streetcar/trolley or electric bus operating on tires.

**11 (Live Animal)** is used for collisions with live animals (domesticated or wild) that are not themselves being used as transportation or to draw a wagon, cart, or other transport device (see [ANSI D16.1](#)). Default to **11 (Live Animal)** if it cannot be determined if the struck animal is alive, dead, or if it was being ridden or drawing a transport device.

**49 (Ridden Animal or Animal-Drawn Conveyance)** is used for ridden animals and animals drawing transport devices. See **18 (Other Object [Not Fixed])** for an animal carcass.

**18 (Other Object [Not Fixed])** is used when a motor vehicle strikes a non-fixed object that is known NOT to have been the cargo or part of **a** motor vehicle in-transport or when it is UNKNOWN whether the object was the cargo or part of **a** motor vehicle in-transport (i.e., refers to objects such as a dead body, animal carcass, construction cones or barrels, an unattached trailer, a bicycle without a rider, downed tree limbs or power lines, or debris from a prior crash). For objects that have become separated from a motor vehicle in-transport not as a result of a prior crash, use attribute [\*\*73 \(Object That Had Fallen from Motor Vehicle In-Transport\)\*\*](#).

**15 (Non-Motorist on Personal Conveyance)** is used for pedestrians using personal conveyances. A personal conveyance is a device, other than a transport device, used by a pedestrian for personal mobility assistance or recreation. These devices can be motorized or human powered, but not propelled by pedaling.

**Inclusions:**

1. Rideable toys
  - a. Roller skates, in-line skates
  - b. Skateboards
  - c. Skates
  - d. Baby carriage
  - e. Scooters
  - f. Toy wagons
2. Motorized rideable toys
  - a. Motorized skateboard
  - b. Motorized toy car
  - c. ***Motorized kick scooter***
3. Devices for personal mobility assistance
  - a. ***Self-balancing personal conveyance (e.g., Segway-style device)***
  - b. Motorized and non-motorized wheelchair
  - c. ***Mobility aid*** scooters

**Exclusions:**

1. Golf cart
2. Low-speed vehicles (LSVs)
3. Go-carts
4. Minibike
5. “Pocket” motorcycles
6. Motor scooters
7. Moped

**14 (Parked Motor Vehicle)** is used when the impact occurred between a motor vehicle in-transport and a motor vehicle neither on a roadway nor in motion. A vehicle stopped off the roadway, its door open over a roadway, is not in-transport. This attribute would also apply for a parked vehicle struck by another parked vehicle. For example, if a motor vehicle in-transport hits a parked vehicle and pushes it into a second parked vehicle (the only event for the second parked vehicle), the MOST HARMFUL EVENT for the second parked vehicle is

**14 (Parked Motor Vehicle).**

**45 (Working Motor Vehicle)** is used to indicate the motor vehicle contacted was in the act of performing construction, maintenance, or utility work related to the trafficway when it became an involved unit. The vehicle should be known to be in the act of performing work. This “work” may be located within open or closed portions of the trafficway and motor vehicles performing these activities can be within or outside the trafficway boundaries. This code does not include private construction/maintenance vehicles, or vehicles such as garbage trucks, delivery trucks, taxis, emergency vehicles, tow trucks, etc. **DO NOT evaluate this attribute on NCSA Body Type alone.**

**Examples:**

1. Asphalt/steam roller working in a highway construction zone paving the roadway or flattening dirt.
2. State highway maintenance crew painting lane lines on the road, mowing grass on the roadside or median, repairing potholes, removing debris from the roadway, etc.
3. Utility truck or a “cherry picker,” performing maintenance on power lines along the roadway or maintaining a traffic signal.
4. A private excavating company contracted by the State digging the foundation for a new overpass.
5. A State, county, or privately-owned snowplow, plowing ice/snow as part of a highway maintenance activity.
6. Street sweeper sweeping the street.
7. A vehicle in a mobile work convoy displaying arrow boards or other signaling devices warning motorists of the work activity.
8. A law enforcement vehicle that is participating strictly in a stationary construction or mobile maintenance activity as a traffic slowing, control, signaling, or calming influence.

**NOTE:** Code “45” excludes working activities other than highway construction, maintenance, or utility vehicles (garbage truck picking up trash, mail/delivery trucks while making deliveries, personal vehicles plowing snow, etc. These are considered motor vehicles In-transport). Use [RELATED FACTORS-VEHICLE LEVEL](#) code **042 (Other Working Vehicle [Not Construction, Maintenance, Utility, Police, Fire, or EMS Vehicle])** to identify these vehicles.

A question may arise when a police, fire, or emergency medical vehicle is struck on the roadway while at the scene of a crash, at a traffic stop, or as traffic control. The question becomes, “has its function changed from being a motor vehicle in-transport to a working

vehicle?” The answer is “no.” Treat these situations as a motor vehicle in-transport striking another motor vehicle in-transport. Use RELATED FACTORS-VEHICLE LEVEL code [041 \(Police, Fire, or EMS Vehicle Working at the Scene of an Emergency or Performing Other Traffic Control Activities\)](#) to identify that this vehicle was struck while performing these work activities.

**73 (Object That Had Fallen from Motor Vehicle In-Transport)** is used when a motor vehicle impacts a non-fixed object at rest that is known to have been the cargo or part of *a* motor vehicle in-transport. Do not use this attribute for debris from a prior crash. This attribute does not include vehicle occupants that are ejected or fall from a motor vehicle in-transport (e.g., a motorcycle operator falling from a motorcycle). For people falling from a motor vehicle, see the non-collision event [05 \(Fell/Jumped From Vehicle\)](#). For impacts involving two motor vehicles in-transport resulting from cargo, people, or objects set in motion, see [54 \(Motor Vehicle In-Transport Strikes or is Struck by Cargo, Persons, or Objects Set in Motion from/by another Motor Vehicle In-Transport\)](#). For at rest detached trailers (e.g., a detached semi-trailer), use attribute [18 \(Other Object \[Not Fixed\]\)](#). If cargo fell from a vehicle, came to rest, and was struck, this attribute would apply. If the cargo was at rest in the roadway as a result of a prior crash, use attribute [18 \(Other Object \[Not Fixed\]\)](#).

**91 (Unknown Object Not Fixed)** is used when the event involves an object that is known to be not fixed but the case material does not identify the specific object.

### ***Collision With Fixed Object:***

The attributes [58 \(Ground\)](#), [33 \(Curb\)](#), [34 \(Ditch\)](#), and [35 \(Embankment\)](#) are grouped under the Collision With Fixed Object subset because they are intended to be harmful events in the crash (i.e., they are associated with an impact that produces injury or damage).

When coding these events there must be fields on the or verbiage in the narrative such as “struck,” “hit,” “impacted,” etc. that identify these as harmful.

For cases where the indication of the harmful event came from the narrative, there may not be a corresponding indication of damage in any police crash report field. In these instances, code the harmful event as stated in the narrative and include the corresponding attribute under [AREAS OF IMPACT](#).

If there is no indication of damage from contact with the fixed object in fields on the police crash report and the narrative language does not identify it as a harmful event (e.g., “came to rest on the embankment,” “drove through” or “drove across” the ditch and/or the embankment, or “drove over” the curb), do not code **33 (Curb)**, **34 (Ditch)**, or **35 (Embankment)** in the [SEQUENCE OF EVENTS](#).

**17 (Boulder)** is a rock of sufficient mass that when struck by a motor vehicle moves very little and remains basically intact. It may be considered as a fixed object.

**19 (Building)** is used when the vehicle impacts a roofed and walled structure built for permanent use. The type of construction material used is not of interest, nor is the use of the building.

**58 (Ground)** is used when the impact is with an earthen or paved surface off the roadway. **58 (Ground)** is not to be entered when the harmful event is [01 \(Rollover/Overturn\)](#).

Indication of furrowing, gouging, or digging in of the tires/wheels is not sufficient to code the collision event **58 (Ground)**. For example, if the police crash report narrative states “the trucks tires dug into the turf causing the vehicle to roll over,” the harmful event should be **01 (Rollover/Overturn)**.

**20 (Impact Attenuator/Crash Cushion)** is a device for controlling the absorption of energy released during vehicle collision (crash cushion). Its most common application involves the protection of fixed roadside objects such as bridge piers, elevated gores at exit ramps, etc. Examples include barrels filled with water or sand, and plastic collapsible structures.

**50 (Bridge Overhead Structure)** is used when striking the bottom of a bridge while traveling underneath it. See [Figure 20](#) for a diagram of Bridge Components.

**21 (Bridge Pier or Support)** is a square or round column of stone, concrete, brick, steel, or wood for supporting a bridge between abutments. This attribute includes the bridge abutments that are supporting the ends of a bridge. Abutments are generally designed for retaining or supporting the embankment under bridge ends and composed of stone, concrete, brick, or wood (includes the wing-walls). See [Figure 20](#) for a diagram of Bridge Components.

**23 (Bridge Rail [Includes Parapet])** is a wooden, brick, stone, concrete, or metal fence-like structure that runs along the outermost edge of the roadway or sidewalk on the bridge or a rail constructed along the top of a parapet. Balustrade is often used synonymously with parapet. See [Figure 20](#) or a diagram of Bridge Components.

- Bridges do not need to support another roadway. It may be an overpass for a train or even for a viaduct (water conduit).

**24 (Guardrail Face)** is a low barrier that has the primary longitudinal structure composed of metal (plates, mesh, box beam, etc.). A guardrail is differentiated from **25 (Concrete Traffic Barrier)** by the material making up the greatest part of the longitudinal portion of the structure. In the case of guardrails, this is metal whereas in concrete barriers this is concrete (including concrete rails). If the crash report does not differentiate between guardrail face and end, default to guardrail face.

Guardrails that serve as bridge rails should be coded as **23 (Bridge Rails [Includes Parapet])**.

**52 (Guardrail End)** is coded if a vehicle strikes the end of a guardrail. Guardrails can have a separate flat or rounded piece of metal attached to the end of an expanse of guardrail face.

**25 (Concrete Traffic Barrier)** refers to the longitudinal traffic barriers constructed of concrete. This includes all temporary concrete barriers regardless of location (i.e., temporary Jersey Barrier on a bridge being used to control traffic during bridge repair/construction). Concrete walls (vertical side surfaces) do not apply here (see [39 \(Wall\)](#)).

**57 (Cable Barrier)** refers to a flexible barrier system that uses several cables typically supported by steel posts. These barriers are designed to help lessen impact or keep vehicles within the confines of the road.

**26 (Other Traffic Barrier)** is used for all other longitudinal barriers such as wood or rock.

**59 (Traffic Sign Support)** is used when the post supporting a traffic sign, or the sign itself, is hit by a motor vehicle. This includes mile marker posts and elevated signs.

**46 (Traffic Signal Support)** is used when the post supporting a traffic signal, or the signal itself, is hit by a motor vehicle. *Use 46 (Traffic Signal Support) for a railroad crossing arm/gate.*

**30 (Utility Pole/Light Support)** refers to supports for highway lighting systems, not including other private lighting systems (e.g., parking lot lights). **30 (Utility Pole/Light Support)** is used for electrical, telephone, cable, and other utility pole-type supports.

**31 (Other Post, Other Pole, or Other Supports)** is used for posts other than highway signs, utility poles, or light supports (reflectors on poles alongside of roadway, parking meters, flag poles, etc.). For mailbox posts, use [53 \(Mailbox\)](#). For fence posts, use [38 \(Fence\)](#).

**32 (Culvert)** is a man-made drain or channel crossing under a road, sidewalk, etc.

**33 (Curb)** is a concrete or asphalt structure that borders the paved surface. It provides drainage control and pavement edge delineation. The face of the curb may be sloped or vertical. Ensure that the police crash report provides some indication that damage has occurred when a vehicle strikes a curb. This attribute includes collisions with curbing that forms raised islands, medians, or separators. For example, if the report identifies the vehicle struck/collided with a traffic island, channelizing island, raised median, or separator, use **33 (Curb)** not [43 \(Other Fixed Object\)](#).

**34 (Ditch)** includes any man-made structure for drainage purposes. A ditch ends where a culvert begins and resumes on the opposite side of the culvert. Reference to a “ditchbank,” “embankment of the ditch,” or “ditch embankment” should be coded under **34 (Ditch)**.

**35 (Embankment)** is a raised structure to hold back water, to carry a roadway, or the result of excavation or washout (including erosion) that may be faced with earth (or rock, stone, or concrete). A **35 (Embankment)** can usually be differentiated from a [39 \(Wall\)](#) by its incline whereas a wall is usually vertical. However, there are exceptions to this, such as a retaining wall that may be inclined or a vertical embankment that is caused by a natural event such as a washout. In crashes involving a field approach or driveway crossing, use attribute **35 (Embankment)** when no specific components (e.g., culverts or ditches) are identified.

**38 (Fence)** includes the fence posts. A Fence can be made of wood, chain link, stone, etc.

**39 (Wall)** is a primarily vertical structure composed of concrete, metal, timber, or stone that is not part of a building or a fence but typically is used for retaining earth, abating noise, and separating areas (but not for containment as in the primary function of a fence). Also included as a **39 (Wall)** are headwalls (or endwalls) that are sometimes provided on culvert ends principally to protect the sides of the embankment around the culvert opening against erosion. This does not include wing-walls, which are attached to ends of bridge abutments and extend back at an angle from the roadway. Wingwalls should be coded as [21 \(Bridge Pier or Support\)](#).

**40 (Fire Hydrant)** refers to the roadside device used by fire departments to provide water for fighting fires. Usually made of steel, these devices are also referred to as fire plugs or fire standpipes in some areas.

**41 (Shrubbery)** refers to vegetation that is usually of a woody multi-stemmed variety and in most instances, is low growing rather than tall. May also be called bushes. Some common examples are boxwood, hawthorn, and mountain laurel.

**42 (Tree [Standing Only])** is used when a vehicle strikes a standing tree. This includes impacts from overhanging branches, tree stumps, or large cactus (Saguaro). If a vehicle strikes a fallen

tree, use [18 \(Other Object \[Not Fixed\]\)](#). If a tree falls on a vehicle as it is passing by, use [16 \(Thrown or Falling Object\)](#).

**48 (Snow Bank)** is used when snowfall and/or road plowing creates essentially fixed barriers of snow/ice that are not snow-covered earth or rock embankments.

**53 (Mailbox)** refers to a private residence mail/newspaper box including the post. A cluster of private mailboxes is included in this attribute. This element does not include U.S. Mailbox, which are typically blue and are for general public use. Code a U.S. Mailbox as **43 (Other Fixed Object)**.

**43 (Other Fixed Object)** is used when the object is fixed (considered a permanent structure) and is not described by any of the other fixed object attributes. This attribute excludes collisions with curbing that forms raised islands, medians, or separators (See also [33 \(Curb\)](#).)

**Examples:**

- Bus shelters
- Pedestrian walkways
- Toll booths
- Guy wires supporting utility poles
- U.S. Mailbox for public use

Other examples would include property damage to standing crops, yards, and other vegetation (excluding: [41 \(Shrubbery\)](#), [42 \(Tree \[Standing Only\]\)](#), and [58 \(Ground\)](#)) if noted on the crash report.

When the case material identifies a non-specific object impact, apply the following guidelines. If the case material only identifies the harmful event as:

- “Fixed Object,” then use [43 \(Other Fixed Object\)](#).
- “Sign,” then use [59 \(Traffic Sign Support\)](#).
- “Post,” then use [31 \(Other Post, Other Pole, or Other Supports\)](#).
- “Signpost,” then use [59 \(Traffic Sign Support\)](#).
- “Bridge,” then use [23 \(Bridge Rail \[Includes Parapet\]\)](#) when the vehicle is on top of the bridge. When the vehicle is going under the bridge, use [21 \(Bridge Pier or Support\)](#).
- “Barrier,” then use [26 \(Other Traffic Barrier\)](#).

**93 (Unknown Fixed Object)** is used when the event involves an object that is known to be fixed but the case material does not identify the specific object.

**Not Reported/Unknown**

**98 (Harmful Event, Details Not Reported)** is used when a harmful event was reported but the object classification was not reported. *Check to see if [91 \(Unknown Object Not Fixed\)](#), [93 \(Unknown Fixed Object\)](#), or [99 \(Reported as Unknown\)](#) are more appropriate for the situation.*

**99 (Reported as Unknown)** is only used if the MOST HARMFUL EVENT is an event where the [SEQUENCE OF EVENTS](#) is **99 (Reported as Unknown)**.

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                        | <b>THEN</b>                                                                      |
|-----------------|----------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| A041            | CRASH MONTH equals 05-09,                                                        | SEQUENCE OF EVENTS, FIRST HARMFUL EVENT, MOST HARMFUL EVENT should not equal 48. |
| AL3P            | UNIT TYPE equals 2-4,                                                            | MOST HARMFUL EVENT must not equal 54 for this vehicle.                           |
| AL5P            | UNIT TYPE equals 1,                                                              | at least one event in the SEQUENCE OF EVENTS must equal the MOST HARMFUL EVENT.  |
| AL7P            | UNIT TYPE equals 2-4,                                                            | MOST HARMFUL EVENT should not equal 04-07, 16, 51, 72.                           |
| AL9P            | there is one and only one parked vehicle (UNIT TYPE equals 2 or 3) in the crash, | MOST HARMFUL EVENT for the parked vehicle must not equal 14.                     |

### V39 - Fire Occurrence

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.FIRE\_EXP, Person.FIRE\_EXP, Parkwork.PFIRE

**ELEMENT VALUES:**

| Codes | Attributes                         |
|-------|------------------------------------|
| 0     | <a href="#">No or Not Reported</a> |
| 1     | <a href="#">Yes</a>                |

**Definition:** This element identifies whether or not a fire in any way related to the crash occurred in this vehicle.

**Remarks:** For the purposes of this element, “vehicle” is defined to mean the power unit plus any and all trailing units associated with the power unit.

If it cannot be determined that a fire occurred in the vehicle during the crash, use **0 (No or Not Reported)**.

**1 (Yes)** is used when the case material indicate that this vehicle sustained fire damage.

In a multi-vehicle crash where a fire occurs, only the vehicles sustaining fire damage should be coded as **1 (Yes)**.

Fires that begin in a vehicle before the first impact may be counted. If fire damage is produced, **02 (Fire/Explosion)** would be the [FIRST HARMFUL EVENT](#).

If the [MOST HARMFUL EVENT](#) for this vehicle is **02 (Fire/Explosion)**, or a fire in the vehicle is produced by damage in the crash, use **1 (Yes)**. The involved vehicles may be at rest for a short period of time.

If the vehicles are at rest long enough to raise a question about the fire’s relationship to the crash’s damage-producing events, use **0 (No or Not Reported)**.

#### Examples for Fire Occurrence:

| Examples                                                                                                                                                                                                                                           | Code                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| Car (V#1) strikes tank truck (V#2) in rear, the car catches on fire with no fire occurring for the tank truck.                                                                                                                                     | V#1 - <b>1 (Yes)</b><br>V#2 - <b>0 (No or Not Reported)</b>                |
| Vehicle #1 catches fire, causing driver to strike vehicle #2.                                                                                                                                                                                      | V#1 - <b>1 (Yes)</b><br>V#2 - <b>0 (No or Not Reported)</b>                |
| Vehicle #1 catches fire, causing driver to stop vehicle in roadway and all occupants exit vehicle. Two minutes later, a second car (V#2) rear-ends the stopped car and its driver is killed from collision. (Attributes reflect the second crash.) | V#1 - <b>0 (No or Not Reported)</b><br>V#2 - <b>0 (No or Not Reported)</b> |

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                         | <b>THEN</b>                                                                           |
|-----------------|---------------------------------------------------|---------------------------------------------------------------------------------------|
| 4Z0P            | SEQUENCE OF EVENTS equals 02,                     | FIRE OCCURRENCE for this vehicle must equal 1.                                        |
| 4Z1P            | UNIT TYPE equals 1, and FIRE OCCURRENCE equals 1, | at least one SEQUENCE OF EVENTS must equal 02.                                        |
| 540F            | FIRST HARMFUL EVENT equals 02,                    | the vehicle involved in the FIRST HARMFUL EVENT must have FIRE OCCURRENCE equal to 1. |

## V40 - Motor Vehicle Automated Driving System(s)

**FORMAT:** 3 sets, 2 numeric

**SAS NAME:** Vehicle.ADS\_PRES; Vehicle.ADS\_LEV; Vehicle.ADS\_ENG

**ELEMENT VALUES:**

### Subfield 1 - Automation System or Systems Present in Vehicle

| Codes | Attributes                          |
|-------|-------------------------------------|
| 00    | <a href="#">No</a>                  |
| 01    | <a href="#">Yes</a>                 |
| 98    | <a href="#">Not Reported</a>        |
| 99    | <a href="#">Reported as Unknown</a> |

### Subfield 2 - Highest Automation System Level Present in Vehicle

| Codes | Attributes                                               |
|-------|----------------------------------------------------------|
| 00    | <a href="#">Level 0 - No Automation</a>                  |
| 01    | <a href="#">Level 1 - Driver Assistance Present</a>      |
| 02    | <a href="#">Level 2 - Partial Automation Present</a>     |
| 03    | <a href="#">Level 3 - Conditional Automation Present</a> |
| 04    | <a href="#">Level 4 - High Automation Present</a>        |
| 05    | <a href="#">Level 5 - Full Automation Present</a>        |
| 09    | <a href="#">Automation Present, Level Unknown</a>        |
| 98    | <a href="#">Not Reported</a>                             |
| 99    | <a href="#">Reported as Unknown</a>                      |

### Subfield 3 - Highest Automation System Level Engaged at Time of Crash

| Codes | Attributes                                                           |
|-------|----------------------------------------------------------------------|
| 00    | <a href="#">Level 0 - No Automation</a>                              |
| 01    | <a href="#">Level 1 - Driver Assistance Engaged</a>                  |
| 02    | <a href="#">Level 2 - Partial Automation Engaged</a>                 |
| 03    | <a href="#">Level 3 - Conditional Automation Engaged</a>             |
| 04    | <a href="#">Level 4 - High Automation Engaged</a>                    |
| 05    | <a href="#">Level 5 - Full Automation Engaged</a>                    |
| 06    | <a href="#">Automation System(s) Engaged, Level Unknown</a>          |
| 09    | <a href="#">Automation System(s) Present, Unknown if Any Engaged</a> |

| Codes | Attributes                                                |
|-------|-----------------------------------------------------------|
| 90    | <a href="#">Automation System(s) Present, Not Engaged</a> |
| 98    | <a href="#">Not Reported</a>                              |
| 99    | <a href="#">Reported as Unknown</a>                       |

**Definition:** The hardware and software that are collectively capable of performing part of or all the dynamic driving task on a sustained basis. This term, Automated Driving System (ADS), is used generically to describe any system capable of level 1-5 driving automation. (SAE 2016) See [Figure 21](#) below.

**Remarks:**

Dynamic driving task includes the operational (steering, braking, accelerating, monitoring the vehicle and roadway) and tactical (responding to events, determining when to change lanes, turn, use signals, etc.) aspects of the driving task, but not the strategic (determining destinations and waypoints) aspect of the driving task.

Driving mode is a type of driving scenario with characteristic dynamic driving task requirements (expressway merging, high-speed cruising, low speed traffic jam, closed-campus operations, etc.).

Request to intervene is notification by the Automated Driving System (ADS) to a human driver that s/he should promptly begin or resume performance of the dynamic driving task.

***Subfield 1 - Automation System or Systems Present in Vehicle***

Indicates the presence of an Automation System or Systems in this vehicle.

**00 (No)** is used when an Automation System or Systems is/are not present in this vehicle. If Subfield 1 is coded **00 (No)**, then Subfield 2 and Subfield 3 must be coded 00 (Level 0 - No Automation).

**01 (Yes)** is used when an Automation System or Systems is/are present in this vehicle.

**98 (Not Reported)** *Check to see if 00 (No) or 99 (Reported as Unknown) are more appropriate for the situation.*

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS/CRSS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

If Subfield 1 is coded **98 (Not Reported)**, then [Subfield 2](#) and [Subfield 3](#) must also be coded **98 (Not Reported)**.

**99 (Reported as Unknown)** is used if the investigating officer reported the presence of automated driving systems in this vehicle as unknown. If Subfield 1 is coded **99 (Reported as Unknown)**, then [Subfield 2](#) and [Subfield 3](#) must also be coded **99 (Reported as Unknown)**.

### ***Subfield 2 - Highest Automation System Level Present in Vehicle***

Indicates the highest level of Automation present in this vehicle. These systems do not have to be engaged in this vehicle at the time of the crash. See [Figure 21](#) for automation level determination.

**00 (Level 0 - No Automation):** is used when Subfield 1 is coded **00 (No)**.

**01 (Level 1 - Driver Assistance Present):** Driver assistance system of either steering or acceleration/ deceleration using information about the driving environment and with the expectation that the human driver performs all remaining aspects of the dynamic driving task. See [Figure 21](#) below.

**02 (Level 2 - Partial Automation Present):** The driving mode-specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the human driver performs all remaining aspects of the dynamic driving task. See [Figure 21](#).

**03 (Level 3 - Conditional Automation Present):** The driving mode-specific performance by an automated driving system of all aspects of the dynamic driving task with the expectation that the human driver will respond appropriately to a request to intervene. See [Figure 21](#) below.

**04 (Level 4 - High Automation Present):** The driving mode-specific performance by an automated driving system of all aspects of the dynamic driving task, even if a human driver does not respond appropriately to a request to intervene. See [Figure 21](#) below.

**05 (Level 5 - Full Automation Present):** The full-time performance by an automated driving system of all aspects of the dynamic driving task under all roadway and environmental conditions that can be managed by a human driver. See [Figure 21](#) below.

**09 (Automation Present, Level Unknown)** is used when it is known that an Automation System was present; however, the level of automation is unknown.

**98 (Not Reported)** is used when Subfield 1 is coded [98 \(Not Reported\)](#).

**99 (Reported as Unknown)** is used when Subfield 1 is coded [99 \(Reported as Unknown\)](#).

### ***Subfield 3 - Highest Automation System Level Engaged at Time of Crash***

Indicates the highest level of Automation that was known to have been engaged in this vehicle at the time of the crash. See [Figure 21](#) for automation level determination.

**00 (Level 0 - No Automation):** is used when Subfield 1 is coded 00 (No).

**01 (Level 1 - Driver Assistance Engaged):** Driver assistance system of either steering or acceleration/ deceleration using information about the driving environment and with the expectation that the human driver performs all remaining aspects of the dynamic driving task. See [Figure 21](#) below.

**02 (Level 2 - Partial Automation Engaged):** The driving mode-specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the human driver perform all remaining aspects of the dynamic driving task. See [Figure 21](#) below.

**03 (Level 3 - Conditional Automation Engaged):** The driving mode-specific performance by an automated driving system of all aspects of the dynamic driving task with the expectation that the human driver will respond appropriately to a request to intervene. See [Figure 21](#) below.

**04 (Level 4 - High Automation Engaged):** The driving mode-specific performance by an automated driving system of all aspects of the dynamic driving task, even if a human driver does not respond appropriately to a request to intervene. See [Figure 21](#) below.

**05 (Level 5 - Full Automation Engaged):** The full-time performance by an automated driving system of all aspects of the dynamic driving task under all roadway and environmental conditions that can be managed by a human driver. See [Figure 21](#) below.

**06 (Automation System(s) Engaged, Level Unknown)** is used when it is known that an Automation System was engaged at the time of the crash; however, the level of automation is unknown.

**09 (Automation System(s) Present, Unknown if Any Engaged)** is used when it is known that an Automation System was present in this vehicle; however, it is Unknown if it was engaged at the time of this crash.

**90 (Automation System(s) Present, Not Engaged)** is used when it is known that an Automation System or Systems is/are present in this vehicle, but none are engaged at the time of the crash.

**98 (Not Reported)** is used when Subfield 1 is coded [98 \(Not Reported\)](#).

**99 (Reported as Unknown)** is used when Subfield 1 is coded [99 \(Reported as Unknown\)](#).

| SAE level                                                                   | Name                          | Narrative Definition                                                                                                                                                                                                                                                                                       | Execution of Steering and Acceleration/Deceleration | Monitoring of Driving Environment | Fallback Performance of Dynamic Driving Task | System Capability (Driving Modes) |

### \*FARS ONLY ATTRIBUTES

**Definition:** This element identifies factors related to this vehicle expressed in the case material.

**Remarks:** Code information provided in the case material.

*Attributes 029-045 are flags used to identify this vehicle as one with special circumstances. They do not necessarily imply that this circumstance caused the crash.* RELATED FACTORS-DRIVER LEVEL [024 \(Operating Without Required Equipment\)](#) can be coded in conjunction with vehicle level conditions.

**000 (None)** is used when no applicable related factors are noted in the case material.

**030 (Multi-Wheeled Motorcycle Conversion)** is used when the case material identifies this vehicle is a motorcycle that is converted to a multi-wheeled configuration from a 2-wheeled *Original Equipment Manufacturer* (OEM) motorcycle. These vehicles will **not** have a NCSA BODY TYPE attribute [82 \(Three-Wheeled Motorcycle \[2 Rear Wheels\]\)](#).

**\*032 (Vehicle Registration for Handicapped)** is used when the case material identifies this vehicle is registered and/or specially equipped for a **person with a disability**. This information can be derived from the vehicle registration. This excludes placards that are usually hung from the rear-view mirror and can be moved from one vehicle to the other.

**033 (Vehicle Being Pushed by Non-Motorist)** is used when the case material identifies this vehicle is being pushed by a non-motorist with or without a driver at the controls.

**045 (Slide-in Camper)** A slide-in camper is a unit that mounts within a pickup bed. Pickup bed caps, tonneau covers, or frame mounted campers are not applicable for this code.

**035 (Reconstructed/Altered Vehicle)** is used when the case material identifies this vehicle is a home-made vehicle constructed from vehicle components or is significantly altered in some way. These vehicles may have a standard VIN, or the State may issue a number in place of the VIN for their registration.

**Examples include:**

- The addition of enhanced performance engine chips or accessories.
- Significant altering of suspension system (“monster trucks,” “low riders,” etc.).
- Hydraulic systems or tilted/canted wheels.

**\*037 (Transporting Children to/from Head Start/Day Care)** is used when the case material identifies this vehicle is used to transport children to Day Care/Head Start in vehicles arranged, operated, or owned by a Head Start or Day Care Program. This attribute is not intended for children being transported to daycare by family/friends in personal vehicles.

**039 (Highway Construction, Maintenance, or Utility Vehicle, In-Transport [Inside or Outside Work Zone])** is used when the case material identifies this vehicle is a highway construction, maintenance, or utility vehicle that is in-transport at the time it became involved in the crash. **Note:** This is **only** used when the vehicle is considered to **not** be a working motor vehicle and is “**in-transport**.” For example, while moving from one job site to another job site or returning to the depot after concluding work activities. This attribute refers to vehicles owned by a local, county, State, or Federal agency. Private vehicles are excluded.

**041 (Police, Fire, or EMS Vehicle Working at the Scene of an Emergency or Performing Other Traffic Control Activities)** is used when the case material identifies this vehicle is a police car, fire truck, or ambulance performing some work function related to working at the scene of an emergency or acting as traffic control.

**Examples include:**

- Police car, fire truck, or ambulance at the scene of a crash.
- Fire truck at the scene of a fire.
- Police car leading or trailing a convoy for a funeral.
- Police car blocking the entrance to a parade route.
- Police car at a check point.

**042 (Other Working Vehicle (Not Construction, Maintenance, Utility, Police, Fire, or EMS Vehicle))** is used when the case material identifies this vehicle is performing some other work activity at the time it was involved in the crash and that activity is somehow associated with the crash.

**Examples include:**

- Garbage truck picking up trash.
- Personal pickup with a snow blade plowing.
- UPS or postal vehicle stopped in the roadway while making a delivery.
- Food delivery truck making a delivery.

**044 (Adaptive Equipment)** is used when the case material identifies this vehicle is equipped with adaptive equipment for operator(s) ***with a disability***.

**Examples include:**

- Extended brake/gas pedals.
- Special steering apparatus.
- Hand brakes or accelerator, etc.

**029 (Default Code Used for Vehicle Numbering)** is used when debris is set in motion as the result of a vehicle-to-vehicle collision and subsequently produces a harmful event for this vehicle and it cannot be determined from the case material that vehicle's debris hit this vehicle. See guidance under [AREAS OF IMPACT - INITIAL CONTACT POINT/DAMAGED AREAS](#).

**999 (Reported as Unknown)** is used when "unknown" is reported for the vehicle condition in the police crash report itself and none of the ***other attributes apply***.

Consistency Checks [\(See Section 400\)](#):

### D3 - Vehicle Number - Driver Level

**FORMAT:** 3 numeric

**SAS NAME:** Vehicle.VEH\_NO

**ELEMENT VALUES:**

| Codes   | Attributes      |
|---------|-----------------|
| 000-999 | Assigned Number |

**Definition:** This element identifies the vehicle number associated with this driver.

**Remarks:**

- Must be coded on an original submission
- System-Generated (**RBIS** Only)
- See [Vehicle Number-Vehicle Level](#) for assignments numbers.
- FOR DRIVERLESS, PARKED/STOPPED OFF ROADWAY/WORKING MOTOR VEHICLES, AND MOTOR VEHICLES IN MOTION OUTSIDE THE TRAFFICWAY, ONLY CODE [DRIVER PRESENCE](#) AND [RELATED FACTORS-DRIVER LEVEL](#).

**Consistency Check** [\(See Section 400\)](#):

| <b>Error ID</b> | <b>Error Message</b>                                                                  |
|-----------------|---------------------------------------------------------------------------------------|
| CSI2            | There must be exactly one DRIVER LEVEL FORM corresponding to each VEHICLE LEVEL FORM. |

## D4 - Driver Presence

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.DR\_PRES

**ELEMENT VALUES:**

| Codes | Attributes                                       |
|-------|--------------------------------------------------|
| 0     | <a href="#">No Driver Present/Not Applicable</a> |
| 1     | <a href="#">Yes</a>                              |
| 9     | <a href="#">Unknown</a>                          |

**Definition:** This element identifies whether or not a driver was present in this vehicle at the onset of the unstabilized situation.

### Remarks:

**0 (No Driver Present/Not Applicable)** is used when there is no person who was controlling this vehicle at the time of the crash.

Also, use **0 (No Driver Present/Not Applicable)** when [UNIT TYPE](#) for this vehicle is not a motor vehicle in-transport ([UNIT TYPE](#) attributes “2, 3, 4”). Use this attribute regardless of the presence of an occupant in the driver’s seat.

**1 (Yes)** is used when there is a person who is physically controlling the vehicle at the onset of the unstabilized situation for this crash. Do not use this attribute for a child sitting in the driver’s seat unless the case material indicate the child was in control of the vehicle. Hit-and-run drivers are included in this attribute. A driver under medical distress would be included. This attribute includes when it is known there was a driver, but it is unknown which occupant was the driver at the time of the crash.

**9 (Unknown)** is used when it is unknown if there was a driver present in the vehicle at the time of the crash.

If coded **0 (No Driver Present/Not Applicable)** or **9 (Unknown)**, all other elements on the Driver Level except [RELATED FACTORS-DRIVER LEVEL](#) must be left blank. A Person Level - Occupant of a Motor Vehicle form with [PERSON TYPE](#) equal to **01 (Driver of a Motor Vehicle In-Transport)** must not be submitted for that vehicle.

If coded **0 (No Driver Present/Not Applicable)** or **9 (Unknown)**, [RELATED FACTORS-DRIVER LEVEL](#) are coded “000” unless [UNIT TYPE](#) is equal to **1 (Motor Vehicle In-Transport [Inside or Outside the Trafficway])**. In such a case, only select [RELATED FACTORS-DRIVER LEVEL](#) that are applicable.

**Consistency Checks ([See Section 400](#)):**

| 57    | <a href="#">Other US Driver's License</a> |
| 93    | Indian Nation                             |
| 94    | US Government                             |
| 95    | Canada                                    |
| 96    | Mexico                                    |
| 97    | Other Foreign Country                     |
| 98    | <a href="#">Not Reported</a>              |
| 99    | Reported as Unknown                       |

**Definition:** This element identifies the State of issue for the license held by this driver.

**Remarks:** If no license is required or driver is not licensed, use the resident State of the driver. U.S. Government is used to indicate the license was issued by the U.S. Government, such as military or State Department Foreign Service.

**57 (Other US Driver's License)** is used for U.S. Territories not identified by their own attribute (Other U.S. Territories, or U.S.-owned outlying areas such as Northern Marianas Islands, Wake Islands, etc.).

**98 (Not Reported) Check to see if 99 (Reported as Unknown) is more appropriate for the situation.**

If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "**Not Reported.**"

Code **98 (Not Reported)** in these two situations:

1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).
2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                      | <b>THEN</b>                                                                                                     |
|-----------------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 1H1F            | DRIVER PRESENCE equals 0, 9,                   | DRIVER'S LICENSE STATE must be blank.                                                                           |
| 1I0P            | DRIVER'S LICENSE STATE equals 99,              | NON-CDL LICENSE STATUS must not equal 0-4, 6, and COMMERCIAL MOTOR VEHICLE LICENSE STATUS must not equal 00-08. |

| U410            | UNLIKELY: DRIVER'S LICENSE STATE equals 98 if HIT AND RUN does not equal 1. | --                                                                                                      |

## D6 - Driver's ZIP Code

**FORMAT:** 5 numeric

**SAS NAME:** Vehicle.DR\_Zip

**ELEMENT VALUES:**

| Codes | Attributes                                          |
|-------|-----------------------------------------------------|
| 00000 | <a href="#">Not a Resident of US or Territories</a> |
| nnnnn | Actual Value                                        |
| 99998 | <a href="#">Not Reported</a>                        |
| 99999 | <a href="#">Reported as Unknown</a>                 |

**Definition:** This element identifies the ZIP Code of this driver's area of residence.

**Remarks:** Code only the first five digits of nine-digit ZIP Codes.

**00000 (Not Resident of US or Territories)** is used when the address found in the case material indicates that the driver resides at an address that has not been assigned a ZIP Code by the U.S. Post Office.

**99998 (Not Reported)** Check to see if 99999 (Reported as Unknown) is more appropriate for the situation.

*If a State's crash report manual instructs to leave blank data blocks that are not applicable, then a blank in those data blocks are NOT considered "Not Reported."*

*Code 99998 (Not Reported) in these two situations:*

- 1. No field or coding block exists on the State's crash report to provide the information to code this element AND no other information is available to code the element (e.g., narrative, diagram, case material).*
- 2. A field or coding block exists on the State's crash report that would provide the information needed to code this element, but it has been left blank, OR a code has been selected on the State's crash report that does not map to any FARS attribute, AND no other information is available to code the element (e.g., narrative, diagram, case material).*

**99999 (Reported as Unknown)** is used *when the officer indicates the driver's ZIP Code is unknown*. For example, use this attribute when no information is provided on the police crash report about the driver (e.g., hit-and-run). In addition, use this code if the driver, licensed or not, has no permanent address. For example, the driver could be living out of his/her vehicle (camper, motor home, etc.), or the driver could be "homeless."

If a ZIP Code is listed on the police crash report but it is not a valid number use attribute [99998 \(Not Reported\)](#).

### FARS SPECIAL INSTRUCTION:

Use the following guidelines to resolve discrepancies between the police crash report and Driver License File:

- If the street address is the same on both sources but the ZIP Codes differ, use the ZIP Code from the License File.
- If you have internet access available, you may use the [USPS ZIP Code Look Up website](#) to confirm you have the correct address.
- If the street addresses on the two sources differ, then use the ZIP Code for the address reported on the police crash report.
- If you have both a residence address and a different mailing address (e.g., a P.O. Box) use the ZIP Code for the residence address.

If the police crash report indicates an address in-State and a driver's license from another State is recorded (with a different residence address), attempt to determine the most current address for the driver. If the most current address cannot be determined, use the ZIP Code that corresponds to the address from the [DRIVER'S LICENSE STATE](#).

### CRSS SPECIAL INSTRUCTION:

For the purposes of this variable, a driver is considered to reside at the address listed on the police crash report. This address was most likely taken from the driver's license given to the police officer and/or from the licensing State's driver license file.

If the driver's address is present and the ZIP Code is missing or not available, then determine the correct ZIP Code by using the [USPS ZIP Code Look Up website](#).

### Consistency Checks ([See Section 400](#)):

| Error ID | IF                                                                              | THEN                             |
|----------|---------------------------------------------------------------------------------|----------------------------------|
| 6H0P     | DRIVER PRESENCE equals 0, 9,                                                    | DRIVER'S ZIP CODE must be blank. |
| BY0P     | DRIVER'S ZIP CODE must be a valid code, blanks, 00000, <b>99998</b> , or 99999. | --                               |

### Consistency Checks (FARS Only) ([See Section 400](#)):

| Error ID | IF                                                                                                     | THEN                                                       |
|----------|--------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| D160     | NON-CDL LICENSE STATUS does not equal 9, or COMMERCIAL MOTOR VEHICLE LICENSE STATUS does not equal 99, | DRIVER'S ZIP CODE should not equal <b>99998 or 99999</b> . |
| D170     | DRIVER'S LICENSE STATE does not equal 93-99,                                                           | DRIVER'S ZIP CODE should not equal <b>99998 or 99999</b> . |
| D180     | DRIVER LICENSE STATE equals 95-97,                                                                     | DRIVER ZIP CODE should equal <b>00000</b> .                |

| <b>Error ID</b> | <b>IF</b>                                    | <b>THEN</b>                                                                                             |
|-----------------|----------------------------------------------|---------------------------------------------------------------------------------------------------------|
| D320            | DRIVER'S LICENSE STATE does not equal 93-99, | DRIVER'S ZIP CODE should equal <b>99998</b> , 99999, or be a valid ZIP code for DRIVER'S LICENSE STATE. |

## D7 - Non-CDL License Type / Status - FARS Only

**FORMAT:** 1 numeric occurring 2 times.

**SAS NAME:** Vehicle.L\_TYPE, Vehicle.L\_STATUS

**ELEMENT VALUES:**

### Type

| Codes | Attributes                                  |
|-------|---------------------------------------------|
| 0     | <a href="#">Not Licensed</a>                |
| 1     | <a href="#">Full Driver License</a>         |
| 2     | <a href="#">Intermediate Driver License</a> |
| 7     | <a href="#">Learner's Permit</a>            |
| 8     | <a href="#">Temporary License</a>           |
| 9     | <a href="#">Unknown License Type</a>        |

### Status

| Codes | Attributes                             |
|-------|----------------------------------------|
| 0     | <a href="#">Not Licensed</a>           |
| 1     | <a href="#">Suspended</a>              |
| 2     | <a href="#">Revoked</a>                |
| 3     | <a href="#">Expired</a>                |
| 4     | <a href="#">Canceled or Denied</a>     |
| 6     | <a href="#">Valid</a>                  |
| 9     | <a href="#">Unknown License Status</a> |

**Definition:** This element identifies in two subfields the type of license held by this driver and the status of the license at the time of the crash.

**Source:** Official driver record and police report. Official driver records take precedence over police-reported information.

### **Remarks:**

This element is used to establish the driver's license type and status for all license classes except the commercial driver's license (CDL). It also captures the type and status of the NON-CDL driving privilege for drivers with CDLs.

The NON-CDL LICENSE TYPE/STATUS is coded for all drivers, including drivers with a CDL.

Use the “[TYPE](#)” field to record whether the driver has a full driver’s license, intermediate driver’s license, learner’s permit, temporary license, or is not licensed. Use the “[STATUS](#)” field to record if the license is valid, suspended, revoked, expired, canceled, or denied.

#### **Note About Involved Drivers in the Military:**

When involved drivers are in the military, the analyst should be cautious because some States automatically (without driver application) renew drivers’ licenses or extend the license until the individual is discharged. Each State analyst should be familiar with their State’s policy on military personnel and code these license variables accordingly. In addition, when out-of-State driver requests are made, the analyst requesting the data should note that the driver is in the military.

**0 (Not Licensed) (for both Type and Status).** **0 (Not Licensed)** should be used only when it has been reasonably established that the driver is not licensed (anywhere). Takes precedence over all other NON-CDL License Type/Status attributes. Drivers who have a license but fail to have their license with them at the time of the crash should be coded according to the type (class) of license they possess and the validity of the license. If the police report indicates that the driver has “no license,” the analyst should first determine whether this means that the person was not in possession of his/her license at the time of the crash, or that the driver is not a registered motor vehicle operator. A review of the violations cited section of the police report may yield some clues in this matter. If the person is cited for not possessing his/her license or for not having one, then code this information *in* [VIOLATIONS CHARGED](#). *If* the analyst is uncertain as to whether or not the person possesses a license, then code [9 \(Unknown License Type\)](#) should be used.

#### ***Non-CDL License Type Remarks:***

**1 (Full Driver License)** is used for unlimited driving privileges (with no GDL restrictions). This is based on your State’s eligibility guidelines.

**7 (Learner’s Permit)** and **2 (Intermediate Driver License)** are the first two stages of a tiered licensing process that allows young drivers to obtain full driver license privileges through safe driving practices. Typical restrictions include minimum age requirements, passing vision/knowledge tests, and supervision by an adult driver over the age of 21. Other requirements may include limiting the number of passengers in the vehicle, occupants must wear seatbelts, zero alcohol tolerance, and no at-fault crashes or convictions for a period of time.

**NOTE:** If **7 (Learner’s Permit)** or **2 (Intermediate Driver License)** has expired, code Type as **2 (Intermediate Driver License)** or **7 (Learner’s Permit)** and Status as **3 (Expired)**.

**NOTE:** It is important that you know your State’s graduated driver license (GDL) restrictions. GDL program restrictions vary from State-to-State.

**2 (Intermediate Driver License)** is the second stage of obtaining a full license privilege. It is typically for drivers between the ages of 16 and 17 and does not require total supervision during daylight hours (e.g., adult supervision during the hours of midnight to 5 am). A **2 (Intermediate Driver License)** may be suspended or revoked under certain violations. Other conditions may include conviction-free performance, seatbelt use for occupants, and some age restrictions for passengers. If any restriction is violated, this GDL restriction period can be extended.

**NOTE: 2 (Intermediate Driver License)** does not apply for States that do not have a GDL program. However, your State may have a Learner's Permit. Also, your State may not use the name "Intermediate Driver License" and may call it something else.

**NOTE: 7 (Learner's Permit)** is the first stage of obtaining a full license privilege. It is typically for drivers between 14 and 16 years old, and typically requires total adult supervision, seatbelt use for occupants, and conviction-free performance. If any restriction is violated, this GDL restriction period can be extended.

**8 (Temporary License)** includes any type of non-permanent license issued for a period of time less than that for a permanent license (e.g., temporary license to drive within a resort area, temporary license issued to foreign nationals). Short-term permanent licenses are not temporary (e.g., license issued to elderly drivers requiring frequent re-testing).

**7 (Learner's Permit)** and **2 (Intermediate Driver License)** held by young drivers awaiting a **1 (Full Driver's License)** are not to be coded **8 (Temporary License)**.

**9 (Unknown License Type)** should be used when the type of the license is unknown. **9 (Unknown License Type)** is also used when it is unknown whether the driver had a license or not (e.g., hit-and-run).

#### ***Non-CDL License Status Remarks:***

**0 (Not Licensed)** should be used only when it has been reasonably established that the driver is not registered (anywhere). **0 (Not Licensed)** takes precedence over all other Non-CDL License Status attributes. Drivers who have a license but fail to have their license with them at the time of the crash should be coded according to the type (class) of license they possess and the validity of the license. If the police report indicates that the driver has "no license," the analyst should first determine whether this means that the person was not in possession of his/her license at the time of the crash, or that the driver is not a registered motor vehicle operator. A review of the violations cited section of the police report may yield some clues in this matter. If the person is cited for not possessing his/her license or for not having one, then code this information ***in VIOLATIONS CHARGED***. If the analyst is uncertain as to whether or not the person possesses a license, then code ***9 (Unknown)*** should be used.

**1 (Suspended)**, **2 (Revoked)**, or **3 (Expired)** are used if a **1 (Full Driver License)** \* is suspended, revoked, or expired. A **2 (Intermediate Driver License)** may be **1 (Suspended)** or **2 (Revoked)** under certain violations. If **7 (Learner's Permit)** or **2 (Intermediate Driver License)** has expired, then code **3 (Expired)**.

#### ***Examples:***

If a **1 (Full Driver License)** is revoked or suspended but limited driving is permitted (e.g., to and from work), use the following criteria:

- a. If the crash occurs during permitted times of driving, code NON-CDL LICENSE TYPE as **1 (Full Driver License)** and STATUS as **6 (Valid)**, code ***COMPLIANCE WITH LICENSE RESTRICTIONS*** as **1 (Restrictions Complied with)**, and code RELATED FACTORS-DRIVER LEVEL as ***019 (Legally Driving on Suspended or Revoked License)***.

- b. If the crash occurs during invalid times for driving, code NON-CDL LICENSE TYPE as **1 (Full Driver License)** and STATUS as **1 (Suspended)** or **2 (Revoked)**, code [COMPLIANCE WITH LICENSE RESTRICTIONS](#) as **2 (Restriction Not Complied with)**, and do NOT use RELATED FACTORS-DRIVER LEVEL **019 (Legally Driving on Suspended or Revoked License)**.

**1 (Suspended)** takes precedence over all other LICENSE STATUS attributes except **0 (Not Licensed)**.

**4 (Canceled or Denied)** is used whenever the driver's official driver record indicates the driver's license\* (1) was canceled; or (2) the driver's request for license, or an extension of one, was denied.

**6 (Valid)** refers to any license held by the driver that is valid for a class of vehicle\*. If the driver is in violation of some aspect of his/her license (e.g., one of the restrictions) do not consider the license as being not valid. Record the restriction on element [COMPLIANCE WITH LICENSE RESTRICTIONS](#) if applicable. If the police cite the driver for the violation, then the information would be recorded under elements [VIOLATIONS CHARGED](#) and/or [RELATED FACTORS-DRIVER LEVEL](#).

**9 (Unknown License Status)** should be used when the status of the license is unknown. **9 (Unknown License Status)** is also used when it is unknown whether the driver had a license or not (e.g., hit-and-run).

[See Cross Reference table for coding elements D7 and D10](#), following the remarks section of element [LICENSE COMPLIANCE WITH CLASS OF VEHICLE](#).

**\* NON-CDL privilege only**

#### IMPORTANT NOTE:

In distinguishing license requirements from restrictions, focus upon whether all drivers possessing the type of license are mandated to obey the requirement or not. If they are, then the requirement is not a restriction, but rather part of the definition of the license. Restrictions, on the other hand, are requirements specific to individual drivers.

**Consistency Checks** [\(See Section 400\)](#):

| Error ID | IF                                               | THEN                                                                                                            |

## D8 - Commercial Motor Vehicle License Status - FARS Only

**FORMAT:** 2 numeric

**SAS NAME:** Vehicle.CDL\_STAT

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 00    | No Commercial Driver's License (CDL)              |
| 01    | Suspended                                         |
| 02    | Revoked                                           |
| 03    | Expired                                           |
| 04    | Canceled or Denied                                |
| 05    | <a href="#">Disqualified</a>                      |
| 06    | <a href="#">Valid</a>                             |
| 07    | <a href="#">Commercial Learner's Permit (CLP)</a> |
| 08    | <a href="#">Other - Not Valid</a>                 |
| 99    | <a href="#">Unknown License Status</a>            |

**Definition:** This element indicates the status for a driver's CDL if applicable.

**Remarks:** This element indicates the status for a driver's CDL.

As of April 1, 1992, all States require a driver to have a CDL for driving a **commercial motor vehicle in excess of 26,000 pounds**, for transporting hazardous materials in sufficient amounts to be placarded, or for transporting 16 or more passengers, including the driver.

See the [Coding Scenarios for CDL Licenses table](#) for guidance on coding this element and related driver status elements.

**05 (Disqualified)** is used for commercial drivers who have their CDL privilege taken away for violations against the Federal regulations. Although similar to suspension, the reasons for "disqualification" of a CDL may differ from State suspension reasons.

**06 (Valid)** refers to a CDL official record status that authorizes the driver to operate a class of a commercial motor vehicle.

**07 (Commercial Learner's Permit [CLP])** means a permit issued to an individual by a State or other jurisdiction of domicile, which, when carried with a valid driver's license issued by the same State or jurisdiction, authorizes the individual to operate a class of a commercial motor vehicle for purposes of behind-the-wheel training. When issued to a CDL holder, a CLP serves as authorization for behind-the-wheel training in a CMV for which the holder's current CDL is not valid.

**08 (Other - Not Valid)** should be used when a CDL is surrendered or not valid due to the lack of medical clearance.

**99 (Unknown License Status)** should be used when the status of the CDL license is unknown or when it is unknown whether the driver had a CDL license or not (e.g., hit-and-run).

**Consistency Checks** ([See Section 400](#)):

| <b>Error ID</b> | <b>IF</b>                                                                                                               | <b>THEN</b>                                                                                                  |

## D9 - Compliance With CDL Endorsements - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.L\_ENDORS

**ELEMENT VALUES:**

| Codes | Attributes                                                  |
|-------|-------------------------------------------------------------|
| 0     | <a href="#">No Endorsement(s) Required for the Vehicle</a>  |
| 1     | <a href="#">Endorsement(s) Required, complied with</a>      |
| 2     | <a href="#">Endorsement(s) Required, not complied with</a>  |
| 3     | <a href="#">Endorsement(s) Required, compliance unknown</a> |
| 9     | <a href="#">Unknown, if required</a>                        |

**Definition:** This element indicates whether the vehicle driven at the time of the crash requires endorsement(s) on a CDL and whether this driver is complying with the CDL endorsements.

**Remarks:** These endorsements include double/triple bottoms, passenger vehicles with 16 passengers, tank, hazardous materials, combined tank/hazardous materials, and others. This element is to be coded independently from CDL Status. The driver is not automatically failing to comply with a CDL endorsement by not having a valid CDL. See the [Guidance on Coding This Element per License Type and Vehicle](#) section below.

**0 (No Endorsements Required for the Vehicle)** is used when this vehicle requires no special endorsement on a CDL or requires no CDL to operate.

**1 (Endorsement(s) Required, complied with)** is used when this vehicle requires a CDL and requires a particular endorsement or set of endorsements, and the driver has a CDL and is in compliance with the specific endorsements. (**Note:** The status of the CDL is not used in determining if the driver has complied with the endorsement.)

**2 (Endorsement(s) Required, not complied with)** is used when this vehicle requires a CDL and particular endorsement(s) on the CDL, but the driver does not have a CDL or does not have the particular endorsement(s) required for the vehicle driven. The driver may have some other endorsement(s). (**Note:** The status of the CDL is not used in determining if the driver has complied with the endorsement.)

**3 (Endorsement(s) Required, compliance unknown)** is used when this vehicle requires a CDL and particular endorsement(s) on the CDL, but it is not known whether the driver was in compliance with the particular endorsement(s) or it is not known whether the driver had a CDL.

**9 (Unknown, if required)** is used when it is unknown if the vehicle requires a CDL, or when it is unknown if an endorsement is required on a CDL to operate the crash vehicle. The driver may or may not have a CDL.

### ***Guidance on Coding This Element per License Type and Vehicle***

The tables below provide guidance for coding this element for the type of license and vehicle driven in the crash:

#### **Non-CDL Driver License**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non-CDL Truck/Bus                  | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Requiring Endorsement         | 2         |
| CDL, Unknown If Required           | 9         |

#### **CDL With No Endorsement**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non- CDL Truck/Bus                 | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Requiring Endorsement         | 2         |
| CDL, Unknown If Required           | 9         |

#### **CDL With Endorsement**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non- CDL Truck/Bus                 | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Matching Endorsement          | 1         |
| CDL, W/Different Endorsement       | 2         |
| CDL, Unknown If Required           | 9         |

#### **CDL, Endorsement Unknown**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non- CDL Truck/Bus                 | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Requiring Endorsement         | 3         |

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| CDL, Unknown If Required           | 9         |

### **CDL Unknown**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non- CDL Truck/Bus                 | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Requiring Endorsement         | 3         |
| CDL, Unknown If Required           | 9         |

### **Not Licensed**

| <b>VEHICLE DRIVEN IN THE CRASH</b> | <b>D9</b> |
|------------------------------------|-----------|
| Automobile                         | 0         |
| Non- CDL Truck/Bus                 | 0         |
| CDL, Not Requiring Endorsement     | 0         |
| CDL, Requiring Endorsement         | 2         |
| CDL, Unknown If Required           | 9         |

Consistency Checks [\(See Section 400\)](#):

| Error ID | IF                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | THEN                                                         |

**SAS NAME:** Vehicle.L\_COMPL

**ELEMENT VALUES:**

| Codes | Attributes                                                                      |
|-------|---------------------------------------------------------------------------------|
| 0     | <a href="#">Not licensed</a>                                                    |
| 1     | <a href="#">No license required for this class vehicle</a>                      |
| 2     | <a href="#">No valid license for this class vehicle</a>                         |
| 3     | <a href="#">Valid license for this class vehicle</a>                            |
| 8     | <a href="#">Unknown if CDL and/or CDL endorsement required for this vehicle</a> |
| 9     | <a href="#">Unknown</a>                                                         |

**Definition:** This element refers to the type of license possessed or not possessed by the driver for the class of vehicle being driven at the time of the crash.

**Source:** Official driver record and police report. Official driver records take precedence over police reported information.

**Remarks:** This element is coded according to the driver's [NON-CDL LICENSE STATUS](#) when driving a vehicle not requiring a CDL and to the driver's [COMMERCIAL MOTOR VEHICLE LICENSE STATUS](#) when driving a vehicle requiring a CDL.

Also see [Remarks for NON-CDL LICENSE TYPE/STATUS on military personnel](#).

**0 (Not licensed)** should be used only when it has been reasonably established that the driver is not licensed (anywhere) and where [NON-CDL LICENSE TYPE/STATUS](#) equals **0 (Not licensed)**. Drivers who have a license but fail to have their license with them at the time of the crash should be coded according to the type of license they possess and the class of vehicle they were driving. **0 (Not licensed)** should not be used in this instance. If the police report indicates that the driver has “no license,” the analyst must first determine whether this means the person was not in possession of his/her license at the time of the crash or that the driver is not a licensed motor vehicle operator. A review of the violations cited section of the police report might yield some clues in this matter. If the person is cited for not possessing his/her license or for not having one, then code this information *in* [VIOLATIONS CHARGED](#). *If* the analyst is uncertain as to whether or not the person possesses a license, then **9 (Unknown)** should be used.

**1 (No license required for this class vehicle)** means that a license was not required for the vehicle being driven (e.g., mopeds in some States).

**2 (No valid license for this class vehicle)** may be used for suspended, revoked, canceled, or expired driving privileges. It also refers to **drivers with a valid license** but not for the class of vehicle driven at the time of the crash. As an example, the driver has an “operator’s license” when a “public passenger” type of license is required. For this driver, **2 (No valid license for this class vehicle)** should be coded. Another common situation occurs when a separate license is

required for a motorcycle. If the driver possesses a valid license for a passenger car but not for the motorcycle, then **2 (No valid license for this class vehicle)** should be used if the driver was involved in this crash while driving a motorcycle.

A license (or a portion of the license applicable to the class vehicle driven) that is not in effect because of some action taken by the State, such as suspended, revoked, etc., is not to be coded as valid. Similarly, learner's permits that are not used under the proper conditions (for example, a required licensed driver for the class of vehicle driven is not present to accompany the driver involved) are not to be coded as valid either.

**2 (No valid license for this class vehicle)** should be used for suspended, revoked, disqualified, canceled, or expired CDL licenses when the vehicle requires a CDL (see table for [Coding Scenarios for CDL Licenses](#)).

**3 (Valid license for this class vehicle)** refers to the class of vehicle being driven. As an example, the driver has a "motorcycle" driver's license only and was driving a motorcycle at the time of the crash; **3 (Valid license for this class vehicle)** should be used. On the other hand, a driver might possess a multiple-class license allowing him or her to drive a passenger car as well as a motorcycle. If the vehicle being driven at the time of the crash is a passenger car, also code this element **3 (Valid license for this class vehicle)**. If the vehicle driver requires a CDL and the CDL status is valid, use **3 (Valid license for this class vehicle)**.

**8 (Unknown if CDL and/or CDL endorsement required for the vehicle)** should be used if it cannot be determined if the vehicle driven requires a CDL or CDL endorsement. There should be sufficient cause to suspect the need for a CDL or CDL endorsement to use this code, such as the vehicle's size (26,001 lbs or more), configuration (truck tractor/trailer, combinations, tankers, etc.), or possibly hauling hazardous cargo.

**9 (Unknown)** should be used when the driver has a license, but the type or validity are uncertain or if it is unknown whether the driver had a license or not (e.g., hit-and-run).

A cross-reference table for coding variables D7 and D10 follows. Consult this table only when the driver is operating a vehicle that does not require a CDL.

**Cross Reference Table for NON-CDL LICENSE STATUS and LICENSE COMPLIANCE WITH CLASS OF VEHICLE:**

**LICENSE COMPLIANCE WITH CLASS OF VEHICLE**

| <u>STATUS</u> | 0 | 1 | 2 | 3 | 8 | 9 |
|---------------|---|---|---|---|---|---|
| 0             | Y | Y | N | N | N | N |
| 1             | N | Y | Y | N | N | N |
| 2             | N | Y | Y | N | N | N |
| 3             | N | Y | Y | N | N | N |
| 4             | N | Y | Y | N | N | N |
| 6             | N | Y | Y | Y | N | Y |
| 9             | N | Y | N | N | N | Y |

Y = Valid Combination

N = Invalid Combination

**REMINDER:** NON-CDL LICENSE STATUS applies to any license entry in the driver's record (except CDL). LICENSE COMPLIANCE WITH CLASS OF VEHICLE applies to this vehicle only.

**Consistency Checks (See Section 400):**

| Error ID | IF                                                                                          | THEN                                                         |
|----------|---------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 1H2F     | DRIVER PRESENCE equals 0, 9,                                                                | LICENSE COMPLIANCE WITH CLASS OF VEHICLE must be blank.      |
| 1K0P     | DRIVER'S LICENSE STATE equals 99,                                                           | LICENSE COMPLIANCE WITH CLASS OF VEHICLE must not equal 0-3. |
| 6L0P     | COMPLIANCE WITH LICENSE RESTRICTIONS equals 1, and RELATED FACTORS-DRIVER LEVEL equals 019, | LICENSE COMPLIANCE WITH CLASS OF VEHICLE must equal 3.       |
| 8L0P     | LICENSE COMPLIANCE WITH CLASS OF VEHICLE equals 0-2, 9,                                     | RELATED FACTORS-DRIVER LEVEL must not equal 019.             |
| 9J0P     | LICENSE COMPLIANCE WITH CLASS OF VEHICLE equals 0, 1,                                       | COMPLIANCE WITH LICENSE RESTRICTIONS must not equal 1-3, 9.  |
| BK0P     | LICENSE COMPLIANCE WITH CLASS OF VEHICLE equals 1,                                          | COMPLIANCE WITH CDL ENDORSEMENTS must not equal 1-3, 9.      |
| BL0P     | COMPLIANCE WITH CDL ENDORSEMENTS equals 1, and any RELATED FACTORS-DRIVER LEVEL equals 019, | LICENSE COMPLIANCE WITH CLASS OF VEHICLE must equal 3.       |
| CG0P     | LICENSE COMPLIANCE WITH CLASS OF VEHICLE equals 0,                                          | COMPLIANCE WITH CDL ENDORSEMENTS must not equal 1, 3.        |

| <b>Error ID</b> | <b>IF</b>                                                                                             | <b>THEN</b>                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| D340            | NON-CDL LICENSE STATUS equals 1-4, 6, 9, or COMMERCIAL MOTOR VEHICLE LICENSE STATUS equals 01-08, 99, | LICENSE COMPLIANCE WITH CLASS OF VEHICLE should not equal 0.          |
| D380            | NON-CDL LICENSE STATUS equals 9,                                                                      | LICENSE COMPLIANCE WITH CLASS OF VEHICLE should equal 1 or 9.         |
| D390            | NON-CDL LICENSE STATUS equals 0,                                                                      | LICENSE COMPLIANCE WITH CLASS OF VEHICLE should not equal 2, 3, 8, 9. |
| D400            | NON-CDL LICENSE STATUS equals 0-4,                                                                    | LICENSE COMPLIANCE WITH CLASS OF VEHICLE should not equal 3, 8, 9.    |
| D410            | LICENSE COMPLIANCE WITH CLASS OF VEHICLE equals 0,                                                    | COMPLIANCE WITH CDL ENDORSEMENTS should not equal 1-3, 9.             |

## D11 - Compliance with License Restrictions - FARS Only

**FORMAT:** 1 numeric

**SAS NAME:** Vehicle.L\_RESTRI

**ELEMENT VALUES:**

| Codes | Attributes                                        |
|-------|---------------------------------------------------|
| 0     | <a href="#">No Restrictions or Not Applicable</a> |
| 1     | <a href="#">Restrictions Complied With</a>        |
| 2     | <a href="#">Restrictions Not Complied With</a>    |
| 3     | <a href="#">Restrictions, Compliance Unknown</a>  |
| 9     | <a href="#">Unknown</a>                           |

**Definition:** This element identifies if a driver was compliant with restrictions on their license.

**Remarks:** Refers to both physical restrictions (corrective lenses, automatic transmission, etc.) and imposed restrictions (limited driving). It also refers to any limitations imposed on Learner's Permits and Intermediate Licenses in States with graduated driver licensing (GDL) programs (e.g., driving during prohibited periods [midnight to 5 a.m.], driving without adult supervision, etc.). (See [Coding Scenarios for GDL Licensing Program](#) table.)

Code all applicable restrictions regardless of license status.

### Examples:

If a [NON-CDL LICENSE TYPE](#) of **1 (Full Driver License)** is revoked or suspended but limited driving is permitted (e.g., to and from work), use the following criteria:

- If the crash occurs during permitted times of driving, code [NON-CDL LICENSE TYPE](#) as **1 (Full Driver License)** and STATUS as **6 (Valid)**, code COMPLIANCE WITH LICENSE RESTRICTIONS as [1 \(Restrictions Complied with\)](#), and code RELATED FACTORS-DRIVER LEVEL as [019 \(Legally Driving on Suspended or Revoked License\)](#).
- If the crash occurs during invalid times for driving, code [NON-CDL LICENSE TYPE](#) as **1 (Full Driver License)** and STATUS as **1 (Suspended)** or **2 (Revoked)**, code COMPLIANCE WITH LICENSE RESTRICTIONS as [2 \(Restriction Not Complied with\)](#), and do NOT use RELATED FACTORS-DRIVER LEVEL **019 (Legally Driving on Suspended or Revoked License)**.

If due to a CDL, a driver has more than one license restriction, code compliance for the most appropriate license restrictions based on the vehicle being driven at the time of the crash (i.e., if vehicle being driven requires a CDL, use the CDL license restrictions).

**0 (No Restrictions or Not Applicable)** is used when the driver has no restrictions on their license, when the driver is unlicensed or when they are operating a vehicle that does not require a license.

**1 (Restrictions Complied With)** is used when the driver is in compliance with the restrictions for their driver's license.

**2 (Restrictions Not Complied With)** is used when the driver is not compliant with the restrictions for their driver's license.

**3 (Restrictions, Compliance Unknown)** is used when it is known that this driver has restrictions on their license, but compliance is not known.

**9 (Unknown)** is used when it is unknown if the driver is licensed or when it is unknown if a licensed driver had restrictions.

**Consistency Checks [\(See Section 400\)](#):**

| <b>Error ID</b> | <b>IF</b>                                                                                     | <b>THEN</b>                                                 |
