Driving for over four years. I haven't seen differences in speed limits to be economical or safe for me or other. I've tried to drive a speed of 66mph thinking it would save me money. Instead I lost time in work hours. Yes you save about 57 a week but you lose about \$1000 a week in load and time on log. Time meaning most of your is hours are now spread out. On which load take longer to deliver and longer drives. On which need more truck to keep up with delivery. More truck more pollution I just don't see where it would benefit the environment by limiting the truck to a speed limit. Look at California, Indiana, Tennessee, and there might be more state to add but that the state I've been where car cut you off cause speed limit is different from cars. Where you need to break the law just to stay safe. Best solution is to make it easier for the cars and tucker same speed limits. Which would make less road rage cause everyone has same speed and if someone wishes to drive slower they can use right lane to drive with joy. I know it is beneficial for large companies to have speed limits. But that just monopolize on small companies like owner operator. Where it not fair and against the bill of right for fair and just opportunities for any American or immigrants
