

## **Comment from Joseph R Watley**

I drive a tesla model 3 and updates now provide me with a clear picture of the surrounding environment. It was a new feeling, but after using it for a time I find myself comfortable with and relying on side screen. On proposed startup Aptera the process is utilized in an even more practical way. The turn screens are on a separate screen directly in front of the steering yoke which provides an unobstructed view. For me this would be a definite go.
