

Comment from Mari Lynch

Regarding "How can the formula grant program require practices to ensure affected communities have a meaningful voice in the highway safety planning process":

Make any online tools truly easy to use (not just judged as easy by tech people who designed them), e.g., avoid necessity to search for a post mile tool to identify road areas you're giving input on. Even tech-savvy people find many online input tools cumbersome. This also includes avoiding, e.g., "best viewed on a desktop in Chrome," since many people have no desktop computer, and many others choose to avoid Chrome, for privacy reasons (because of Google collecting personal data in Chrome).
