I am an Electromagnetically Disabled person who is concerned about the wireless injury self driving cars will have on the driver, passengers and innocent bystanders who may experience microwave sickness from these modulated electromagnetic signals in the microwave range. Wireless signals are beginning adversely impact a growing number of people. An estimated 3% of people are moderately or severely impacted by wireless radiation signals. This percentage is greater than those living with peanut allergies. These signals will impact the public right of way for those who are electromagnetically disabled and interfere with other drivers who are electromagnetically disabled. Currently electromagnetically disabled people are forced to drive their own vehicles, because wireless public transit (cell phones, wireless systems) is inaccessible. Without safe, wired vehicles (opt out wireless capabilities) Electromagnetically disabled people will not be able to access to public roads and transportation.
